Creating a Document

In today's digital era, the skill to create organised and visually appealing documents is an important skill for both academic and professional success. Whether you are preparing school assignments or projects, or simply want to express your thoughts and ideas, word processing software has become a remarkable tool.

Let us discuss the basics of word processing software, which will help you get familiar with the essential tools and features.

Introduction to Word Processor

A document is a piece of information or a record that has been written, printed, or digitally developed that transmits information in a structured and organised way, such as facts, ideas, instructions, or conversations. Documents are important for many aspects of personal and professional lives and can be found in both physical (printed) and electronic (digital) formats. **Documentation** is the process of making documents.

A word processor is a computer software application designed with a single goal of allowing users to write, edit, format, and print text-based documents. Word processors are now an essential component of both personal and professional computing, allowing users to create a variety of documents such as essays, papers, assignments, or even simple personal letters.

Features of a Word Processor

The features of a word processor are listed in the table below:

Features	Description
Ease and Speed	A word processor provides a convenient and faster method to type and create documents.
Editing Features	It enables you to perform various operations such as copying, moving, and deleting text. Header and footer, page number, and page borders are also included.
Formatting Features	Bold, Italics, Underline, Font name, Font size, WordArt, and Color are some of the formatting features.

Features	Description
Storage Features	It allows you to store documents, which you can retrieve when needed.
Tables and Charts	It enables you to insert table and graphs in the documents which helps in easy understanding of data.
Printing Features	It enables you to create a hard copy of your documents. You can also see a preview of a print copy before printing it.
Vocabulary and Spelling Check	This feature helps you create error-free documents. It not only helps in rectifying spelling errors but also suggesting synonyms for words. It also helps in correcting grammatical mistakes.
Mail Merge	It helps in sharing a single document with multiple addresses. It saves a lot of time as well as effort to send everyone individually.
Graphic Feature	To enhance the presentation of your document, you can insert images, charts, and drawings.
OLE Feature	OLE stands for Object Linking and Embedding. This feature allows a word processor to interact with other programs by embedding objects in the documents.

Applications of Word Processing

A word processor is a software application that can write, edit, save, and print documents. Basic word processors such as Notepad and WordPad are also referred to as **Text editors**. Plain text can be created and edited using these. On the other hand, you can edit the text styles in Microsoft Word and Writer, and add creative elements and a fancy text. The following is a list of some word processing applications:

1. Microsoft Word
2. Notepad and WordPad
3. OpenOffice Writer
4. LibreOffice Writer
5. Google Docs

Introduction to Writer

The OpenOffice software suite includes a word processor and publishing tool called OpenOffice Writer. Various operating systems, including Mac OS X, Microsoft Windows, Linux, FreeBSD, and Solaris, support OpenOffice Writer.

OpenOffice Writer has many features, which include:

1. Spelling check
2. Thesaurus
3. Autocorrect
4. Find and replace
5. Automatic generation of tables of contents and indexes
6. Mail merge
7. Styles and templates

8. Page layout
9. Built-in drawing tools

OpenOffice Writer is easy enough to use for a quick memo and can be used to create large documents, reports, and novels. A word processor, spreadsheet, presentation software, and vector drawing tool are all included in the free office package, OpenOffice.

Did You Know?

OpenOffice originated from a project called StarOffice, which was developed by a German company called StarDivision. Sun Microsystems later acquired StarDivision and released the source code as open-source software, giving rise to OpenOffice.org, which eventually became OpenOffice.

Starting OpenOffice Writer

To start OpenOffice Writer on your computer:

1. Click on the **Start** button > **All apps** > select **OpenOffice 4.1.13** > **OpenOffice Writer** from the list. OR
Type Writer or OpenOffice Writer in the search bar and directly search for it. OR
Directly click its shortcut icon if you have placed it on your desktop and then choose Writer.
2. When you open the OpenOffice suite, choose the text document and then the OpenOffice Writer blank document appears.

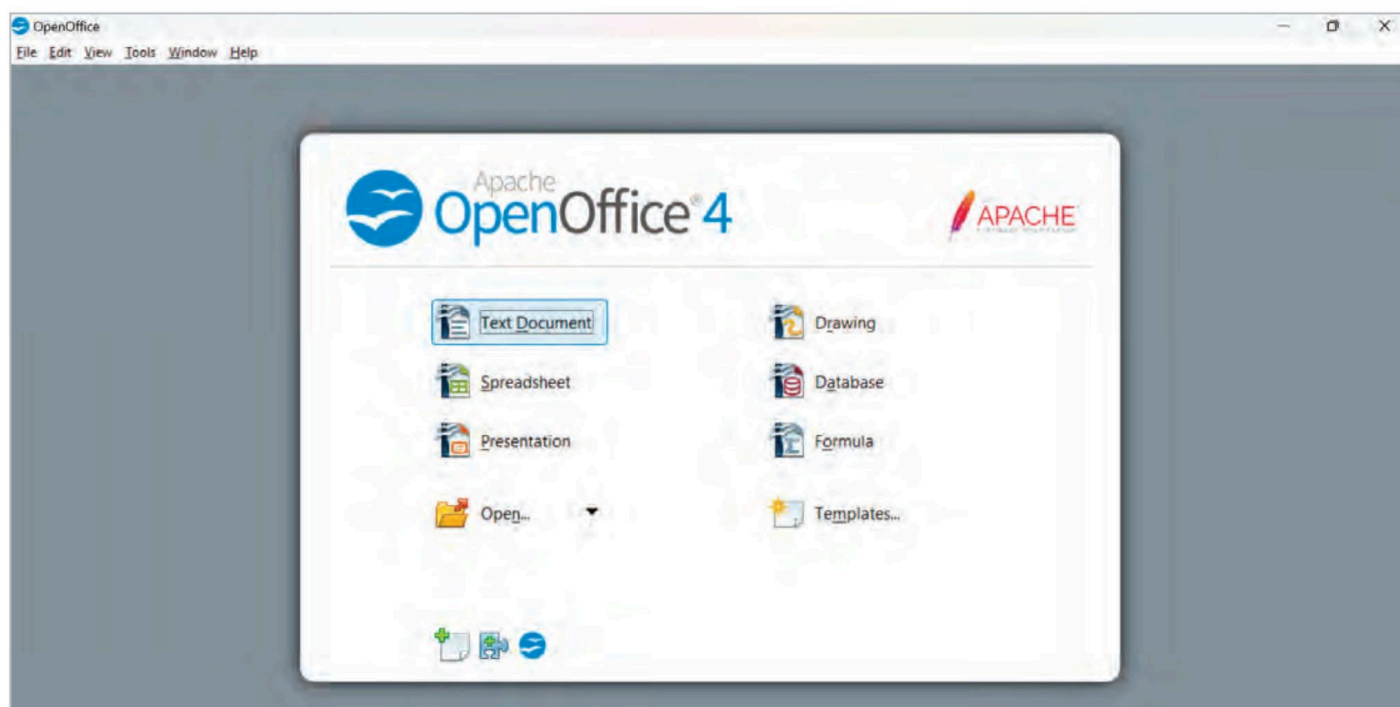

Fig. 4.1: OpenOffice Suite

Did You Know?

OpenOffice Writer is open-source software, which means it is free to use and can be modified by anyone.

Components of OpenOffice Writer

The following are the various components of the Writer window:

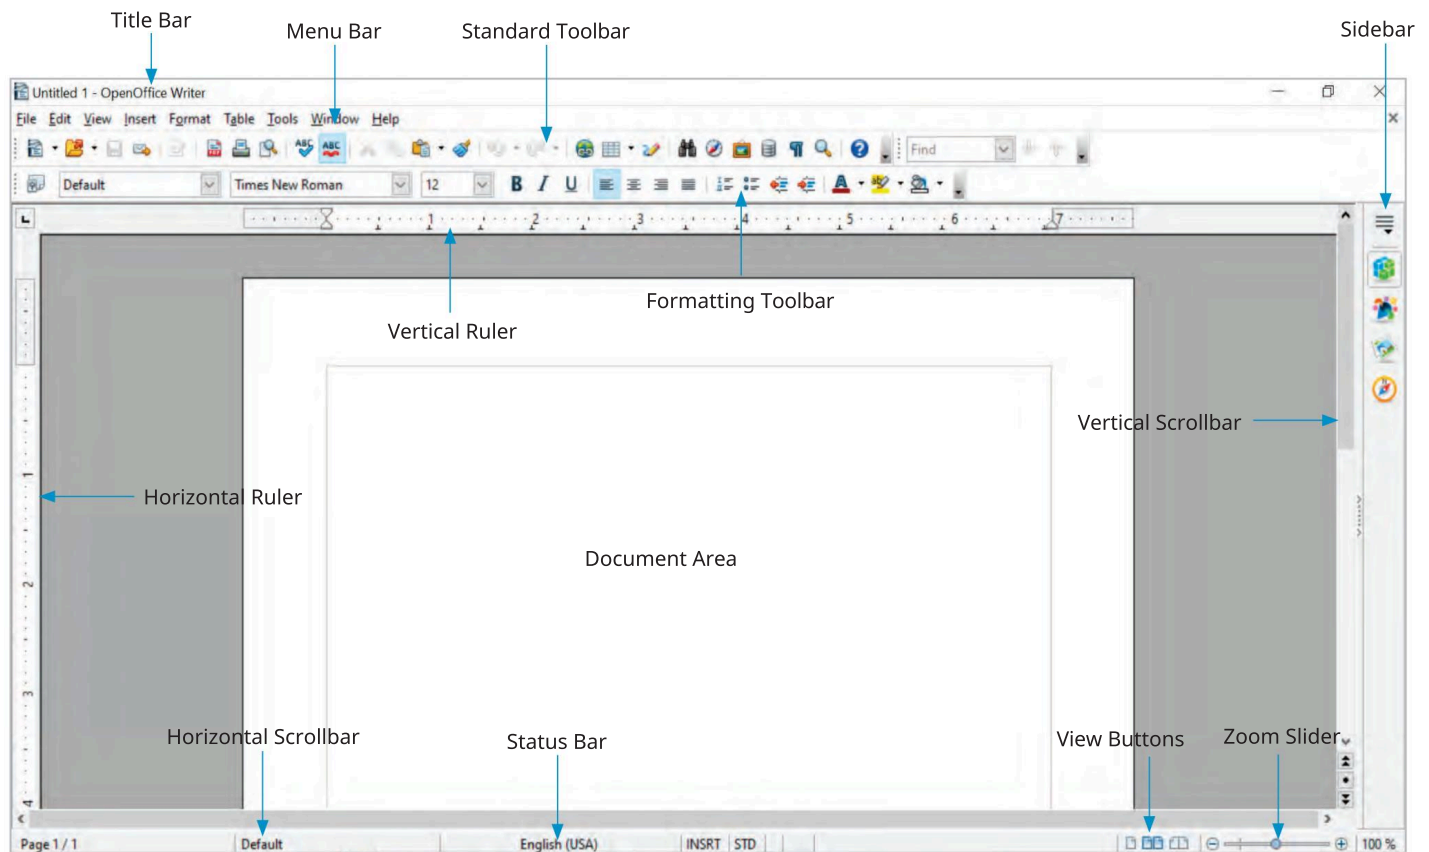

Fig. 4.2: Components of OpenOffice Writer

Components	Description
Title Bar	The title bar is at the top of the screen and shows the name of the current open document. On the right side, you have the options of minimising, maximising, and closing the window.
Menu Bar	The menu bar consists of various options, which include File, Edit, View, Insert, Format, Table, Tools, Windows, and Help. These options come with a drop-down menu or a submenu, which enables a user to engage with the application in diverse ways.
Standard Toolbar	This toolbar shows the commands, which are used frequently and the default options such as save, undo, redo, new, open, cut, copy, and paste.
Formatting Toolbar	It displays those commands which are used for formatting and enhancing text such as changing font, changing font size, changing font colour, adding bullets, highlighting text, alignment of text and numbering.
Rulers	Rulers are present at both the top and left sides of the window. The horizontal ruler measures the width of the document page and shows the setting for margins, tabs, and indentation. The vertical ruler provides control over the alignment of text, and the numbers displayed on it represent the text position on the page.

(continued...)

Components	Description
Document Area	It is an area where you write, edit, and modify your document.
Scroll Bars	The Writer window has horizontal and vertical scroll bars on the right side and bottom of the writer respectively. You can ensure a better screen display with the help of scroll bars.
Status Bar	It shows the number of pages and number of words in the active document. The status bar also provides the option to save your document and has a zoom slider on the right side.
View Buttons	The status bar has three viewing options which are Single page view, Multiple page view, and Book view. There are other viewing options also, which include Print View, Web Layout, and full screen.
Zoom Slider	By using the zoom slider, you can adjust the zoom percentage of the workspace.
Sidebar	The buttons on the sidebar includes sidebar settings, properties, styles and formatting, gallery, and navigator. These buttons enable you to make change in the settings of toolbar and allow you to make changes to documents.

Did You Know?

Writer supports extension and addons, which allow you to extend its functionality with the extra features and tools.

Creating a New Document

The document in OpenOffice Writer can be created in the following ways:

Creating a Document Using OpenOffice Suite Window

1. Open the OpenOffice suite; it shows various options.
2. Double-click the Text document and a blank document will open.

Creating a Document Using Keyboard, Menu Bar, and Toolbar

1. From Keyboard, press **Ctrl + N**.
2. From the menu bar, select **File > New > Text Document**.
3. From Toolbar, click the **New**  icon on the Standard toolbar.

Creating a Document Using a Template

Templates are predesigned layouts which enable users to create various documents, such as reports, resumes, or invitations in an easy way. Templates include placeholders for text, images, and other elements, guiding users on where to input specific content. Templates save time and effort by eliminating the need to start from scratch and ensure consistency in document formatting.

To create a document using a template:

1. Select **File> Templates> Organize**.

OR

Select **New> Templates> Documents**.

2. The **Templates and documents** dialog box appears. Double-click the desired templates to create document.

Saving a Document

To save a document:

1. Click **File > Save**. The **Save As** dialog box appears.
2. Rename the document/file name according to your need so that you can easily find it later.
3. Click **Save**. The file is saved with the extension **.odt**.

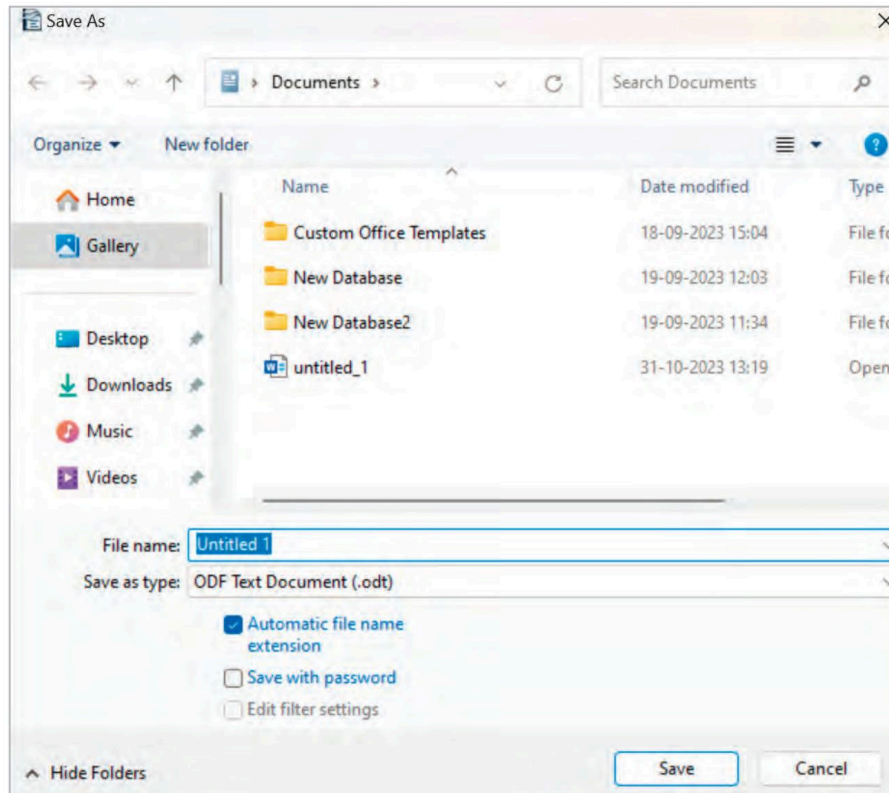

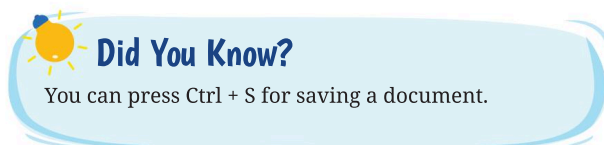

Fig. 4.3: Saving a Document

Saving a Document Automatically

Writer provides the feature to save your document automatically on a temporary basis. To save a document automatically:

1. Go to **Tools** from the Menu bar and choose the **Options**.
2. Select **Load/Save > General**.
3. Select the check box, which states **Save AutoRecovery information every** and set the timer.
4. The default timer is of 15 minutes, but you can change it if needed.
5. You can also choose the **Always create backup copy** option.
6. To save changes, click **OK**.

Automatically saving document on a temporary basis prevents data loss and helps in maintaining data integrity.

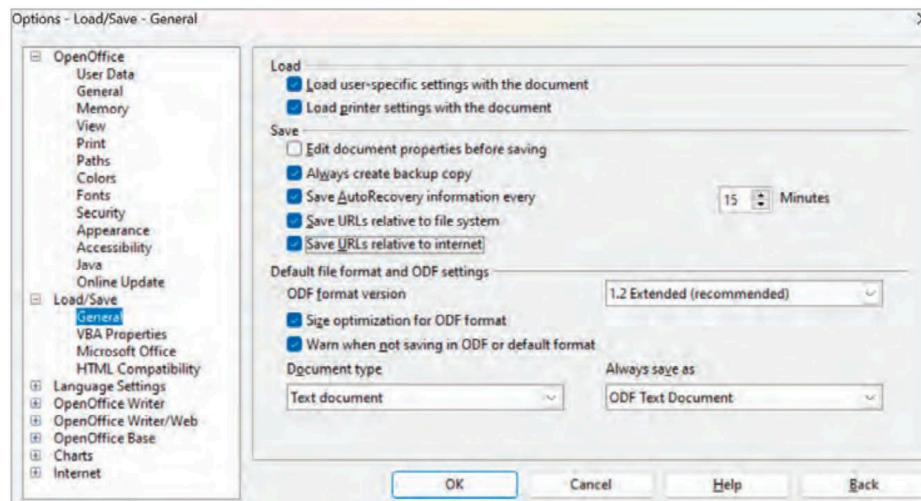

Fig. 4.4: Saving a Document Automatically

Did You Know?

Writer has in-built PDF export capabilities, which allows you to create PDF documents from Writer files.

Closing a Document

You can close the document in the following ways:

1. Select **File > Close**. OR

Click the **Close** button in the top right corner.

Note, if you have already saved your changes, the window will close immediately.

If the document has some unsaved changes, then a dialog box appears asking for saving the change you made. If you want to save, then click **Save**, otherwise, click **Discard**. You can also click **Cancel**, if clicked by mistake.

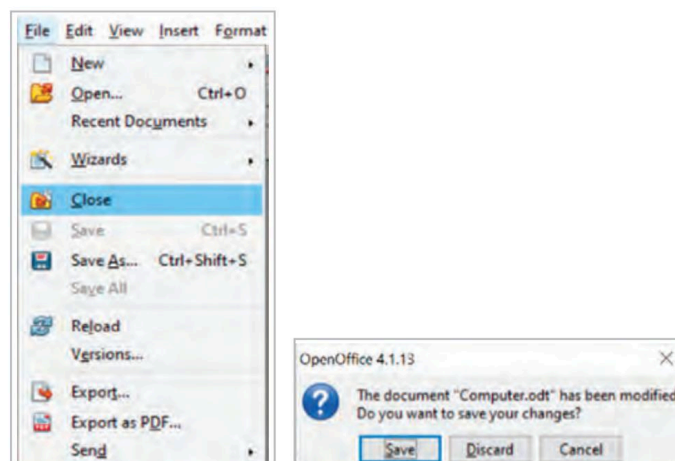

Fig. 4.5: Closing a Document

Opening an Existing Document

After a document is saved on your computer, you can access it whenever needed. To open an existing document, you have several options:

1. In the main startup window of OpenOffice, click **Open** File.
OR
You can go to the Menu bar and choose **File > Open**.
If you already have a document open, a second document opens in a new window.
To open another document:
2. Click the **Open** icon on the Standard toolbar. OR
Select **File > Open**. In the Open dialog box, you can locate and select your file.
3. Click the **Open** button. The selected file opens either in the existing window or as a new one if a document is already open.

Use of Navigator

For navigating lengthy and complex papers with several parts including tables, headings, sections, hyperlinks, and comments, the Writer's Navigator tool is helpful. This tool makes locating and navigating between the objects easier. All these elements are listed in the **Navigator** window. You can access an element by double-clicking it.

To access Navigator, select **View > Navigator**, or you can press F5.

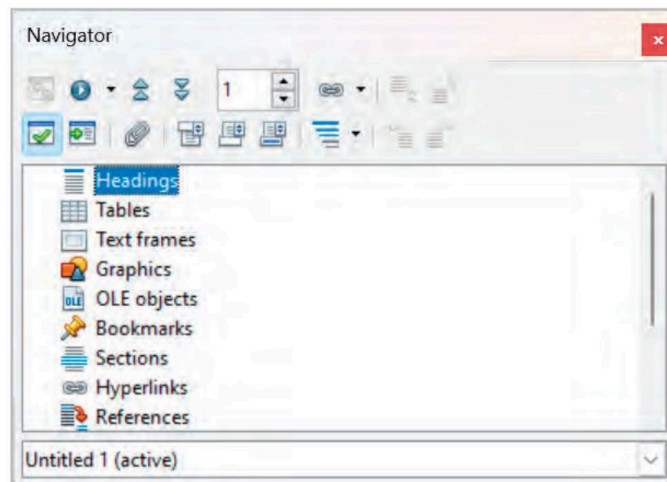

Fig. 4.7: Navigator Dialog Box

The basic functions of a navigator include:

Function	Description
Next Page	If a document consists of too many pages, then this feature comes to your aid as it enables you to move to successive pages.
Previous Page	This button is used to move to the preceding page from the current page in a document.
Header, Footer	This button is used to directly access the document text and Header/Footer.
Content View	This button is used to toggle between all objects in the navigator or any single selected object.

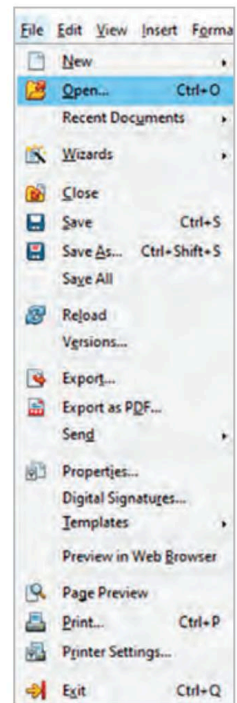

Fig. 4.6: Opening a Document

Cursor and Mouse Pointer

You need to get familiar with the text cursor movement and mouse pointer for easy working with a word processing document.

1. Text Cursor Movement

The cursor is the vertical blinking line in the Document window. The pointer Control Keys (Arrow keys) can be used to move the pointer within a document. On the keyboard, there are four arrow keys: Left, Right, Up, and Down. Besides the Arrow keys, other keyboard keys make it simple for you to move around the document.

Key	Function
Home	It moves the cursor to the beginning of the current line.
Ctrl + Home	It takes you to the beginning of the document.
End	It moves the cursor to the end of the current line.
Ctrl + End	It takes you to the end of the document.
Page Up	It scrolls the page upwards.
Page Down	It scrolls the page downwards.

2. Mouse Pointer

The Mouse pointer on a computer screen is a little arrow. When you bring it over the text, it typically assumes the shape of an I-beam. It is known as a Text Select cursor in this situation. The text can be edited by highlighting the relevant text with the Text Select cursor and clicking it. Thus, the Text Cursor placement is controlled by the mouse.

Activity Time

Activity 1: My Hobbies

(Individual Work)

Create a Writer document on the topic 'My hobbies'. Use the various effects and features you have studied in the chapter and save the file on your desktop.

Activity 2: Current Affair

(Individual Work)

Create a Writer document on any current affair topic and get it checked by your teacher.

Chapter Checkup

A Select the correct option.

- What is the primary purpose of a word processor?
 - Sending emails
 - Playing video games
 - Creating and formatting text-based documents
 - Editing images
- Which of the following is NOT a feature of word processing software?
 - Vocabulary and spelling check
 - Ease and speed of typing
 - Creating presentations
 - Inserting tables and charts

3 Which file extension is commonly used for saving documents in OpenOffice Writer?

- a .docx b .txt c .pdf d .odt

B Fill in the blanks with the most suitable words.

- 1 A word processor is an application designed for creating, editing, formatting, and printing documents.
- 2 The key moves the cursor to the end of the current line.
- 3 The text cursor can be moved to the beginning of the current line using the key.
- 4 Templates in word processing help users create documents with predesigned layouts, saving both and effort.

C State whether the following is *True* or *False*. Correct the statements that are false.

- 1 OpenOffice Writer is a paid software application.
- 2 The Navigator tool in Writer helps in locating and navigating between various elements within a document, such as tables, headings, and hyperlinks.
- 3 The purpose of the Auto Recovery feature in OpenOffice Writer is to automatically correct spelling errors in a document.
- 4 Ctrl + S is used to save a document.

D Answer the following questions. (Solved)

Q1. What are templates?

A1. Templates are predesigned layouts for various types of documents. They guide users on where to input specific content, making document creation efficient and consistent.

Q2. Describe the role of the Navigator tool in OpenOffice Writer and how it aids in document navigation.

A2. The Navigator tool in OpenOffice Writer plays a crucial role in navigating lengthy and complex documents. This tool provides a convenient way to locate and move between various elements within a document, such as headings, tables, sections, hyperlinks, and comments.

Here's how it aids in document navigation:

Element Listing: Navigator lists all these elements at one place, making it easy to find them.

Quick Access: Users can quickly access any element listed in Navigator by double-clicking its name, which takes them directly to that part of the document.

Efficiency: For long documents or documents with many elements, Navigator helps users efficiently locate and edit specific sections without manually scrolling or searching.

Organisation: It aids in the organisation of a document by providing an overview of its structure.

Q3. Parag is unaware of the Auto Recovery feature of Writer. Help him by explaining how the Auto Recovery feature benefits users.

A3. The Auto Recovery feature offers several benefits to users. It automatically saves the document at regular intervals, which can be customised by the user.

Benefits of the Auto Recovery feature:

- **Data Loss Prevention:** Auto Recovery ensures that users don't lose their work due to unexpected system crashes, power outages, or software glitches. This feature regularly saves a backup copy of the document.
- **Data Integrity:** This feature helps maintain the integrity of the document by saving the most recent changes. Users can recover their work up to the last saved interval.

Answer Key

A 1. c 2. c 3. d

B 1. text-based 2. End 3. Home 4. time

C 1. False. It is open-source software, which is available for everyone.
2. True.
3. False. It automatically saves the document at regular intervals.
4. True.

5

Editing a Document

Text editing is the process of making changes to the existing written text in order to improve its quality, correctness, and consistency. It involves looking over the text and making corrections like copy, paste, and find and replace text.

Text Editing—Undo and Redo

The Undo command allows you to reverse your current action performed in a document. This feature enables you to reverse the changes which has been made in a document by mistake instead to redoing all work. To perform Undo command, click on **Edit > Undo** or simply press **Ctrl + Z**.

The Redo command allows you to reverse your action performed in a document through Undo command. This feature is highlighted when you perform the Undo command. To perform Undo command, click on **Edit > Redo** or simply press **Ctrl + Y**.

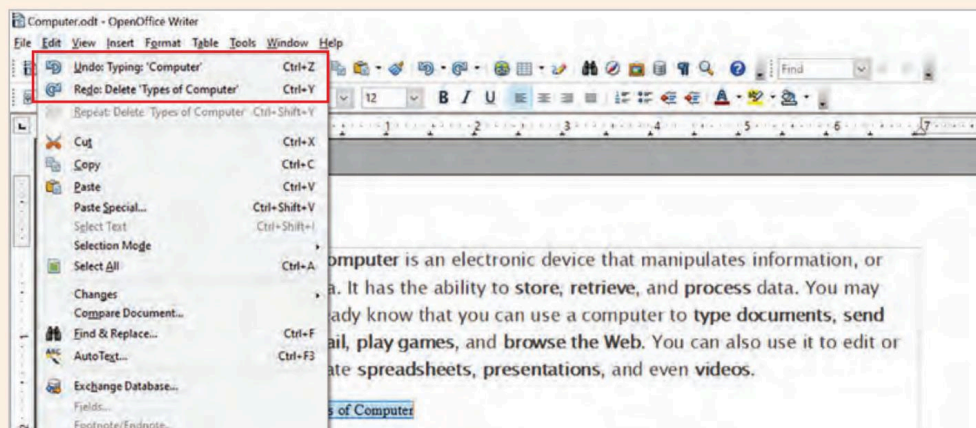

Fig. 5.1: Using Undo and Redo Command

Selecting the Text

To perform any action on the text, sentence, or paragraph, you need to select the desired block of text. When you select a text, it comes in a highlighted manner. Various method to select a text or block of text are:

Selection	Method
A Word	To select a word, double-click it.
A Sentence	Hold down the Ctrl key and triple click anywhere in the sentence or triple click on the left margin beside the sentence.
A Paragraph	Click four times anywhere in the paragraph's left margin.
A Large Block of Text	Click at the text's beginning. Click at the end of the text while holding down the Shift key.
Entire Document	To select the entire document, press Ctrl + A.
Consecutive Text	Place the mouse pointer where you want it to go, then click. Click the text's end while holding down the Shift key.
Non-consecutive Text	Place the mouse pointer where you want it. To pick the word, drag while holding down the Ctrl key. Next, choose another piece of text by dragging it while continuing to hold down the Ctrl key.
A Vertical Block of Text	To select a vertical block or a column of text that is separated by spaces or tabs, click on Edit> Selection Mode> Block area or press Alt+ Shift + F8. Now, drag the mouse to select the text. You will observe vertical selection. To stop selecting text vertically, click on the Edit > Selection Mode > Standard.

Copying and Pasting the Text

A basic computer function called copying and pasting enables you to duplicate the text, photos, files, or data. It keeps the text at the original location as well as copy it to the desired location. This feature helps to save your time and effort of typing. With the help of this you can create multiple copies of a single text.

There are four methods for copying and pasting the text:

Method 1: Using Context Menu

1. Selecting the text, you want to copy, perform a right-click to access the context menu and click on **Copy** option.

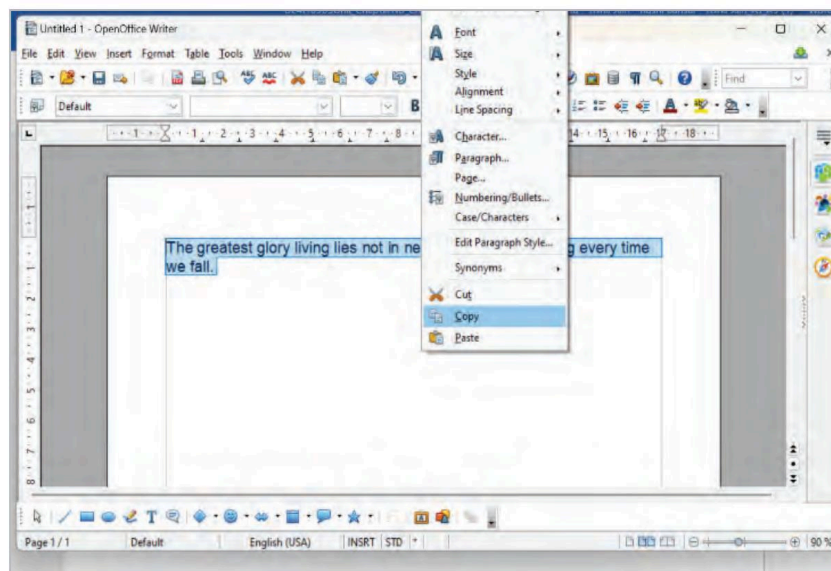

Fig. 5.2: Copying the Text Using Context Menu

2. Next, move your cursor to the desired position, right-click there, and click the **Paste** option from the context menu.

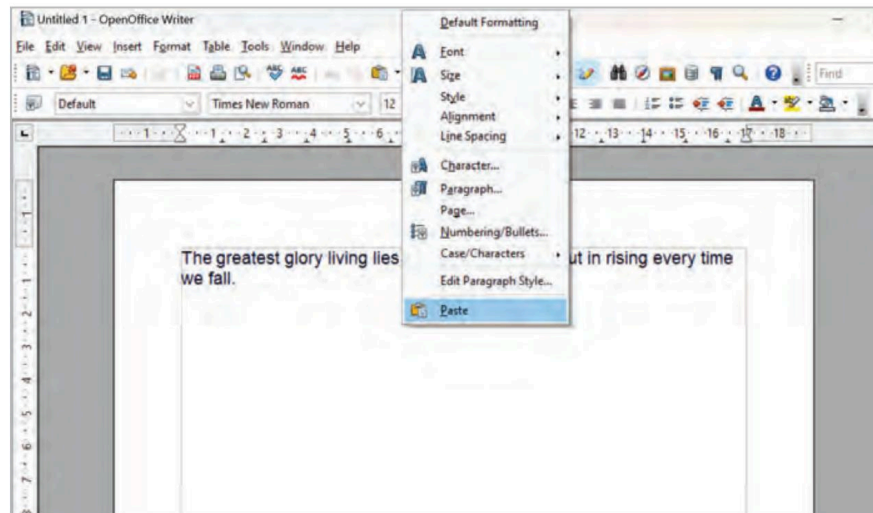

Fig. 5.3: Pasting the Text Using Context Menu

Method 2: Using Standard Toolbar

1. Select the text you want to copy and press the **Copy**  icon on the **Standard** toolbar.
2. Move the cursor to the position where you want to insert the copied text.
3. Click on the **Paste**  icon on the Standard toolbar.
4. The cursor will move to the end of the inserted text.

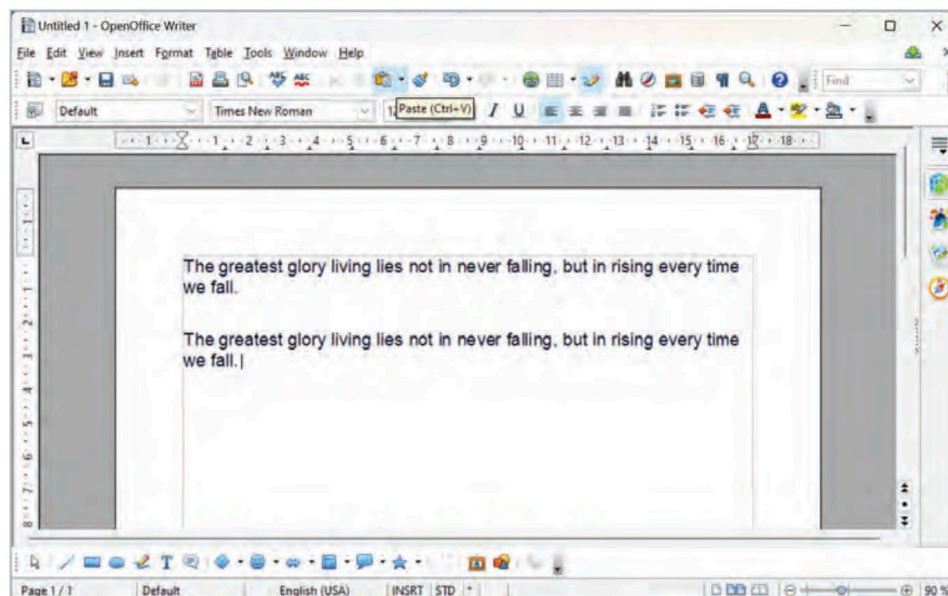

Fig. 5.4: Pasting the Text Using Standard Toolbar

Method 3: Using Edit Menu

1. Select the text you want to copy.
2. Click on the **Edit** menu and select the **Copy** option.
3. Next, place the cursor where you want the text click on the **Edit** menu again, and select the **Paste** command.
4. This action will insert the selected text, and the cursor will position itself at the end of the pasted content.

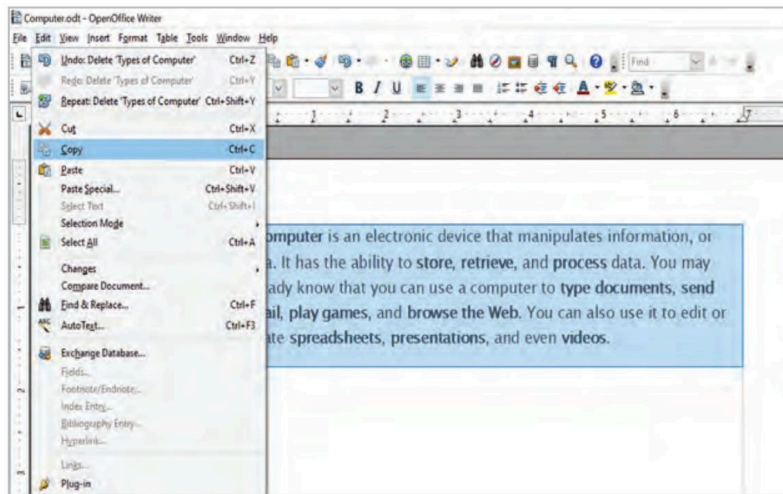

Fig. 5.5: Selecting Copy Option from the Edit Menu

Method 4: Using Shortcut Keys

1. Select the text you want to copy.
2. Press the **Ctrl + C** to copy it.
3. Place the cursor where you want the text.
4. Press the **Ctrl + V** to paste it.

Did You Know?

OpenOffice Writer provides you Auto Save feature that saves your work for short period of time which may reduce the risk of data loss due to sudden computer crash.

Moving Text

This feature enables you to move the position of your text from one place to another. There are four methods for moving the text:

Method 1: Using Context Menu

1. Selecting the text, you want to move, perform a right-click to access the context menu and choose **Cut** option.

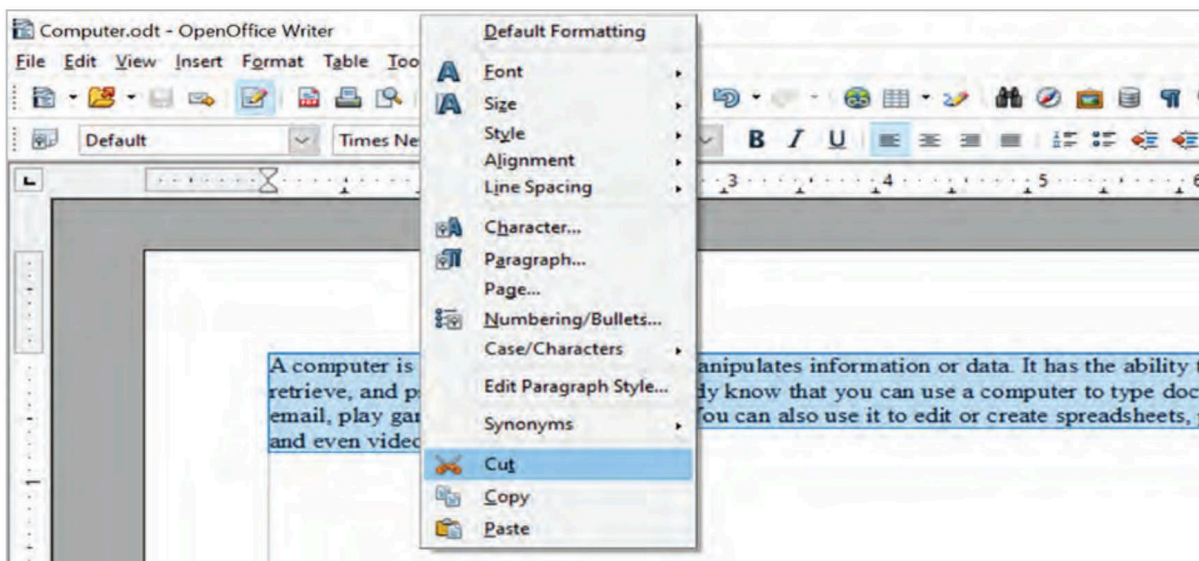

Fig. 5.6: Selecting Cut Option from Context Menu

2. Bring the pointer to the place where you wish to paste the text. Choose the **Paste** option by performing a right-click on that area.

Method 2: Using Standard Toolbar

1. Select the text you want to move and **click** the **Cut**  icon on the **Standard** toolbar.
2. Move the cursor to the position where you want to insert the text.
3. Click on the **Paste**  icon on the **Standard** toolbar.
4. The cursor will move to the end of the inserted text.

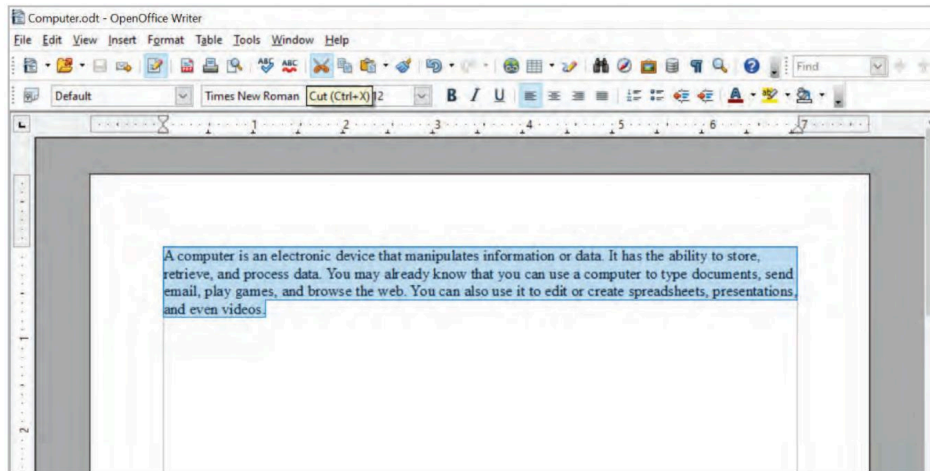

Fig. 5.7: Selecting Cut Option from Standard Toolbar

Method 3: Using the Edit Menu

1. Select the text you want to move.
2. Click the **Edit** menu and choose the **Cut** option.
3. Next, place the cursor where you want to paste the text.
4. Click the **Edit** menu again and select the **Paste** option.
5. This action will insert the selected text, and the cursor will position itself at the end of the pasted content.

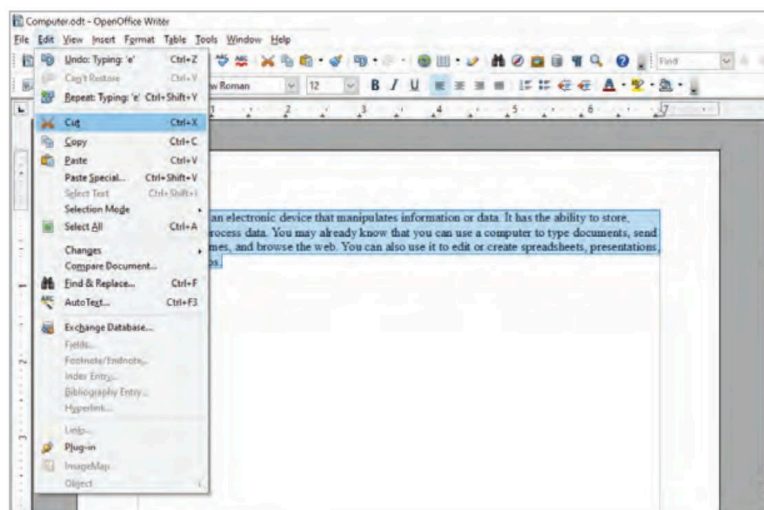

Fig. 5.8: Selecting Cut Command Using Edit Menu

Method 4: Using Shortcut Keys

1. Select the text you want to move.
2. Press the **Ctrl + X** to cut it.
3. Place the cursor where you want the text.
4. Press the **Ctrl + V** to paste it.

When you cut a text from a document it disappears. Have you ever wondered where does it go? Here is the answer, almost every application has a temporary storage known as clipboard, it contains the text till you have pasted it somewhere or you have cut another text.

Did You Know?

Some advanced clipboard managers offer a clipboard history feature that allows you to access and paste previously cut or copied text. This can be very useful if you need to paste multiple items from your clipboard.

Find and Replace

Searching for a word in a large document is quite inconvenient as you might have to go through every sentence and paragraph. So, to make it easier OpenOffice Writer has enabled the users with the automated feature of finding the text as well as replacement and this is known as Find and Replace.

Finding Text

1. Write a paragraph in your document.
2. Click on **Edit** menu and select **Find & Replace** option or press **Ctrl + F**.
3. The **Find and Replace** dialog box appears.

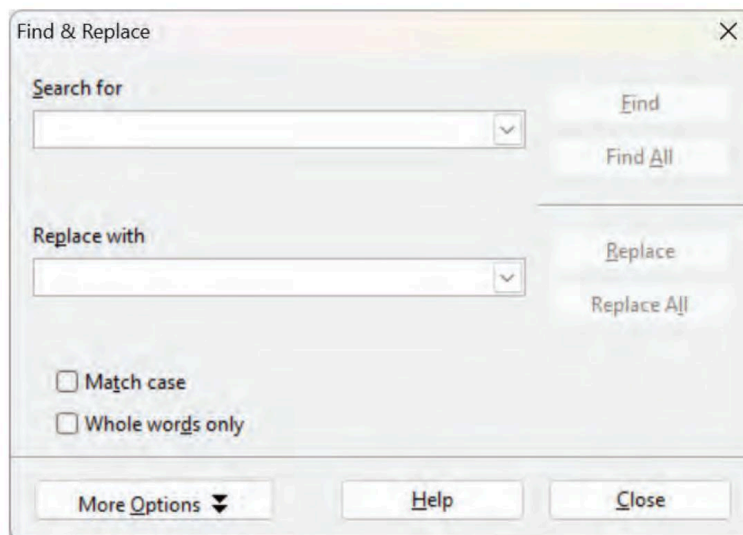

Fig. 5.9: Find and Replace

4. Type the text which you want to search in the **Search for** box and click on **Find/ Find All**. The keywords will be highlighted.
5. To replace the word with another word, type the new word in the **Replace with** box and click **Replace/ Replace All** as per your choice.
6. **Match case** is used to match capital and small letters, whereas **Whole words only** is used to match the whole word.

Jumping to the Page Number

Navigating a lengthy document can be challenging. To swiftly jump to a specific page, you can either double-click the **Page** section in the **Status Bar**, access the **Navigator** from the **View** option, or by pressing the **F5** key. This action will launch the **Navigator** dialog box, where you can input your desired page number and press **Enter**, or select the page number from the up or down arrow options.

Non-printing Characters

Non-printing characters, also called as formatting marks, are characters that don't appear in printed documents. They are used for document formatting. Common non-printable characters in word processors include space (.), non-breaking space (°), tab (→), line break (↵), and paragraph mark (¶). By default, these characters are invisible on the screen. To toggle their visibility, you can click the **Non-printing Characters** button on the **Standard** toolbar. Alternatively, you can access this option from the **View** menu.

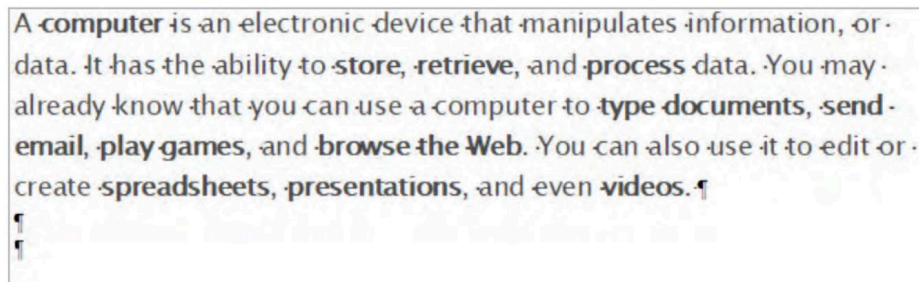

Fig. 5.11: Using Non-printing Characters

Spelling and Grammar

When you submit your homework to teacher, he/she analyse the content of your answer for context and understanding, and she also check for spelling and grammatical mistakes. Similarly, OpenOffice Writer performs a similar task by checking the content you type, displaying red wavy lines for spelling errors and green wavy lines for grammatical errors. It uses a built-in dictionary and grammatical rules to identify and highlight these errors.

To address these issues in your document, you can try the below mentioned ways to improve clarity and correctness.

Auto Spell Check

OpenOffice Writer features an Auto Spellcheck function that examines each word you type, marking incorrectly spelt words with a single red wavy line underneath. This spell check begins from the cursor's position and scans the entire document. When you correct a spelling error, the red wavy line disappears. To activate this automatic spell check, you can click on the designated icon .

An easy method to verify the spelling of a word is as follows:

1. Right-click the word with a red wavy line.
2. A shortcut menu appears with various suggestions.

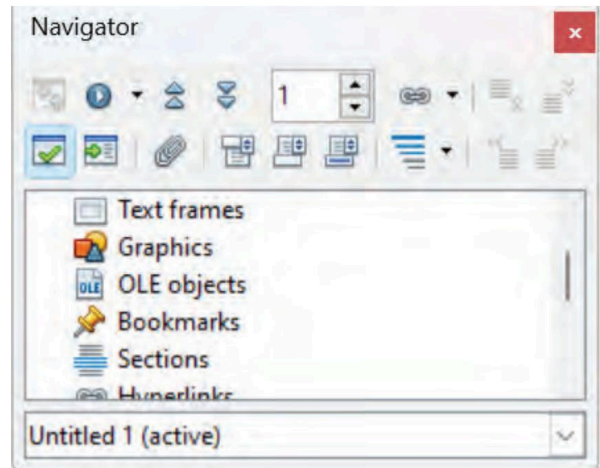

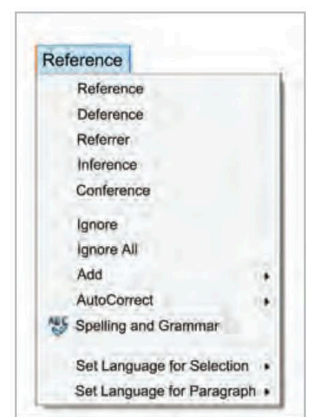

Fig 5.10: Navigator Dialog Box

3. Choose the correct spelling from the list of suggestions.

Writer will automatically replace the incorrect spelling with the selected option.

Checking Spelling and Grammar

To initiate a spell check for the entire document after it has been fully typed, you have several options:

Click on the **Spelling and Grammar**  icon from the Standard toolbar. OR

Click on **Tools > Spelling and Grammar**. OR

Use the keyboard shortcut **F7**.

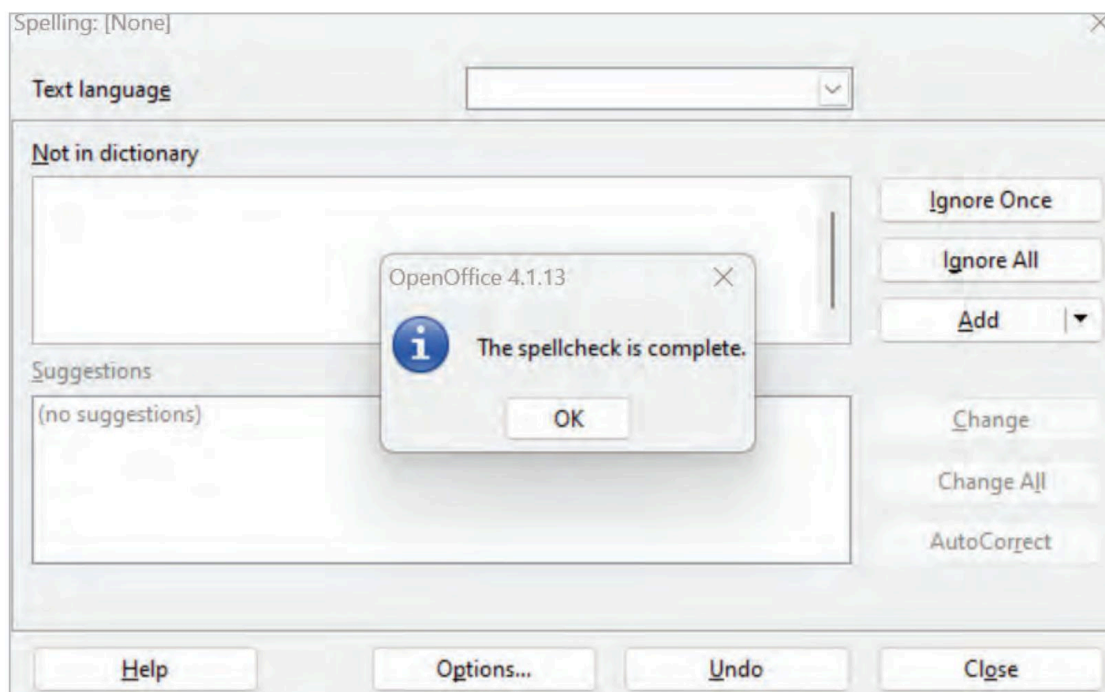

Fig. 5.12: Spelling and Grammar

Additionally, the Spelling dialog box offers various features:

1. You can change the dictionary language, like switching to Spanish or German.
2. If you encounter a new word, you can add it to the built-in dictionary by clicking the 'Add' button.
3. The Options tab presents different settings such as checking capital words and words with numbers.

Automatic Correction

This feature lets you automatically correct common misspelt words or typing errors as you type. To use it, go to **Tools > AutoCorrect** options, and a window will appear.

In situations where the English (India) dictionary includes many regional words and doesn't underline misspelt words, you can change the dictionary to English (USA) to highlight your typing mistakes.

This adjustment will make it possible for you to identify and correct the errors you've made while typing.

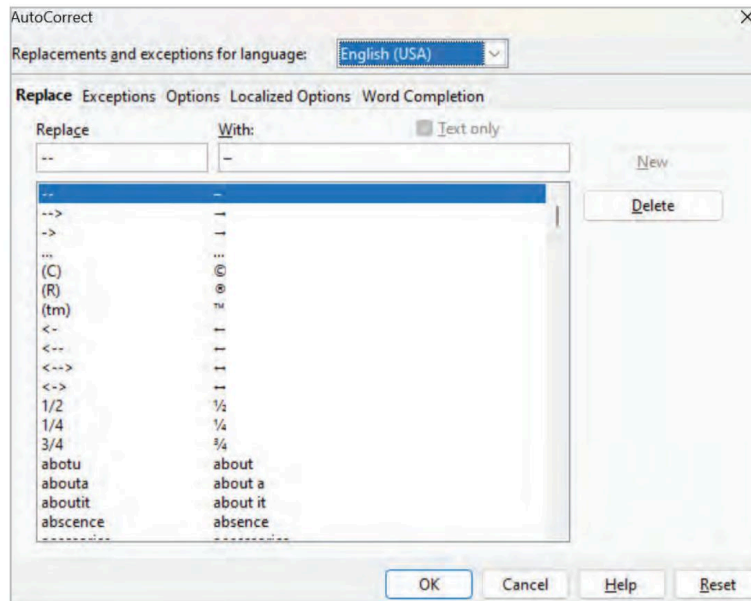

Fig. 5.13: Using AutoCorrect Option

Using Thesaurus

The Thesaurus function serves as an integrated dictionary that allows you to search for equivalents, opposites, word replacements, and different phrasings. This tool enhances your writing skills and vocabulary, aiding in a deeper comprehension of the text. Imagine you've entered the text in a document and desire to insert a synonym for the term "Concern" in its place. To achieve this, you can employ the Thesaurus feature.

1. Select the word 'Concern'.
2. Click on **Tools > Language > Thesaurus** or press Ctrl + F7.
3. The dialog box appears and there you will find synonyms for the selected word.
4. Select the required word and click the Replace button to replace the word.

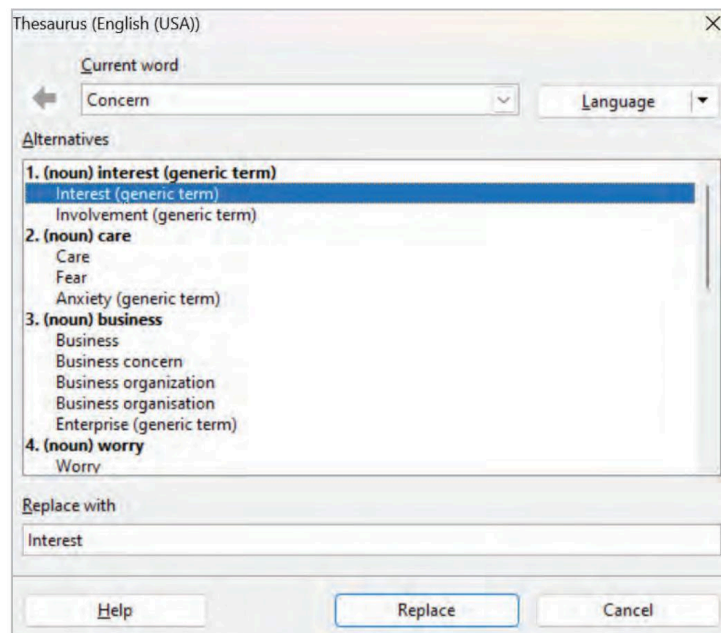

Fig. 5.14: Using Thesaurus

Activity Time

Activity 1: Editing Document

(Individual Work)

Create a Writer document on the topic 'Wildlife Conservation' and perform various text editing functions which has been explained above.

Activity 2: Creating Document

(Individual Work)

Create a Writer document on the topic 'Reflection and Refraction'. Use non-printing character option to emphasise the text.

Chapter Checkup

A Select the correct option.

- 1 What is the keyboard shortcut for the Undo command in text editing?
a Ctrl + C **b** Ctrl + Z **c** Ctrl + V **d** Ctrl + S
- 2 How can you select an entire paragraph in a document?
a Click four times anywhere in the paragraph's left margin.
b Double-click on any word in the paragraph.
c Hold down the Ctrl key and triple-click anywhere in the paragraph.
d Click on any word of the paragraph while holding the Shift key.
- 3 What is the purpose of the Cut operation in text editing?
a To duplicate text **b** To remove text **c** To select text **d** To paste text

B Fill in the blanks with the most suitable words.

- 1 To reverse the most recent action performed in a document, you can use the _____ command or by pressing Ctrl + Z.
- 2 When selecting a word in a document, you can _____ on it to choose it.
- 3 The clipboard temporarily stores text that you have _____ or cut until you paste it somewhere else.
- 4 To initiate a spell check in OpenOffice Writer, you can click the _____ icon from the Standard toolbar.

C State whether the following is True or False. Correct the statements that are false.

- 1 The Undo command in text editing allows you to redo the changes made in a document by mistake.
- 2 The Cut operation in text editing removes the selected text from the document and stores it in the clipboard.
- 3 Non-printing characters, also known as formatting marks, are visible on the screen by default in most word processors.
- 4 The Spelling and Grammar feature in OpenOffice Writer checks for both spelling and grammatical errors in a document.

D Answer the following questions. (Solved)

Q1. How does the Spelling and Grammar feature in OpenOffice Writer assist users?

A1. The Spelling and Grammar feature in OpenOffice Writer checks documents for spelling and grammatical errors. It displays red wavy lines under misspelt words and green wavy lines under grammatical errors. Users can right-click these flagged words to access suggestions and make corrections, ensuring their documents are error-free and grammatically correct.

Q2. Why are non-printing characters useful in word processing?

A2. Non-printing characters, also known as formatting marks, are beneficial in word processing because they provide visibility into document formatting. These characters, such as spaces, tabs, line breaks, and paragraph marks, are typically invisible but can be made visible when needed. They help users troubleshoot layout issues, adjust formatting, and ensure proper document structure by revealing hidden elements that affect the appearance and layout of the text.

Q3. Aarav wants to know the purpose of the Thesaurus in text editing. Help him by explaining the concept.

A3. The Thesaurus function serves as an integrated dictionary that allows you to search for equivalents, opposites, word replacements, and different phrasings. This tool enhances your writing skills and vocabulary, aiding in a deeper comprehension of the text.

Answer Key

A 1. b 2. a 3. b

B 1. Undo 2. double-click 3. copied 4. Spelling and Grammar

C 1. False. The Undo command in text editing allows you to revert the most recent action that was performed. This command does not redo changes but rather undoes them.

2. True.

3. False. Non-printing characters are typically not visible on the screen by default in most word processors. Users usually have to enable an option to view these characters.

4. True.

6

Formatting a Document

Formatting a document is an essential part of creating professional-looking content. OpenOffice makes it easy to format your documents with its powerful formatting tools. Whether you are working on a report, letter, or presentation, OpenOffice provides a wide range of formatting options to help you make your document stand out. In this chapter, we will explore the various formatting features of OpenOffice and show you how to use them to create polished and visually appealing documents.

Page Style Dialog Box

The **Page Style** dialog box in OpenOffice Writer helps manage page layout and formatting. This dialog box lets you customise the margins, orientation, size, headers, and footers of the document. To open the Page Style dialog box:

1. From the menu bar, click on the **Format** menu, and then select the **Page** option.
2. The **Page** tab is selected, by default.
3. You can select the paper format and orientation of the paper from the **Paper format** section.
4. You can select the margins from the **Margins** section.
5. You can select the page layout from the **Layout settings** section.
6. After selecting the required settings, click **OK**.
7. The selected settings will be applied to your page.

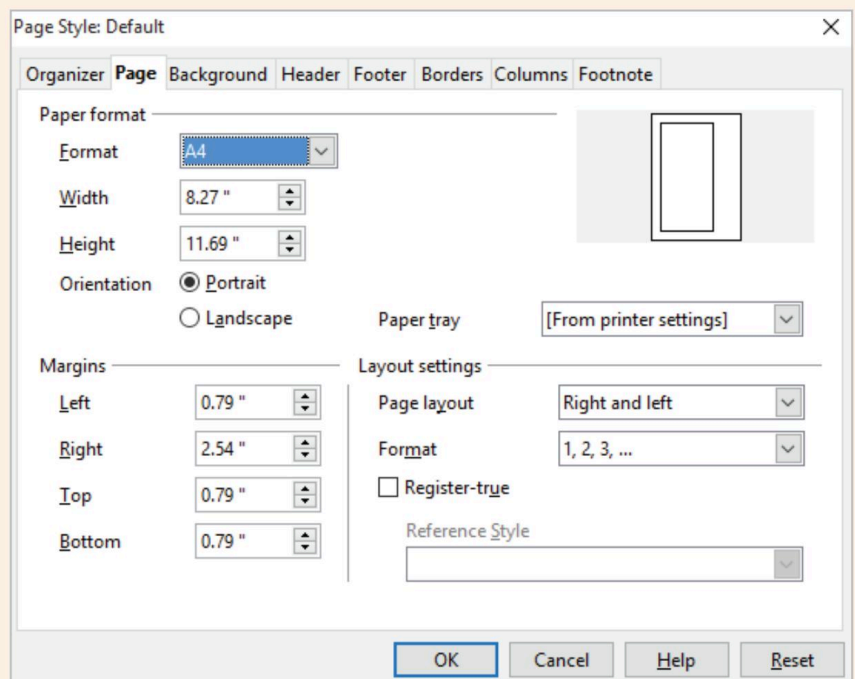

Fig. 6.1: Page Formatting Dialog Box

Formatting Text

To format text in OpenOffice, you can use the **Formatting** toolbar. The Formatting toolbar provides quick access to common formatting options such as font type, font size, bold, italics, and underline. OpenOffice Writer provides you various ways to format text, such as:

1. **Using the Format Menu:** Open the **Format** menu from the menu bar.
2. **Using the Properties Pane:** Click on the **Properties** option in the side bar.
3. **Using the Character Dialog Box:** Click the **Format > Character** option to open the **Character** dialog box.
4. **Using the Context Menu:** Select the text on which you want to apply the formatting and then right-click it. Select the desired option from the context menu that opens.
5. **Using the Formatting Toolbar:** The **Formatting** toolbar is generally displayed on the ribbon below the **Standard** toolbar.
6. **Using Keyboard Shortcuts:** You can use various shortcut key combinations to format the text.

Error Alert!

If, in that case, you want to go back to the original settings of the page, click on the **Reset** button in the **Page Style** dialogue box.

Removing Formatting

To remove formatting in OpenOffice, you can use the **Default Formatting** option in the **Format** menu. You can also remove the formatting from the text by pressing the Ctrl+M key combination.

The steps for removing formatting from text are as follows:

1. Select the text that you want to remove formatting from, as shown in Fig. 6.2.
2. Click the **Format** menu in the menu bar and select **Default Formatting** from the drop-down menu, as shown in Fig. 6.3.

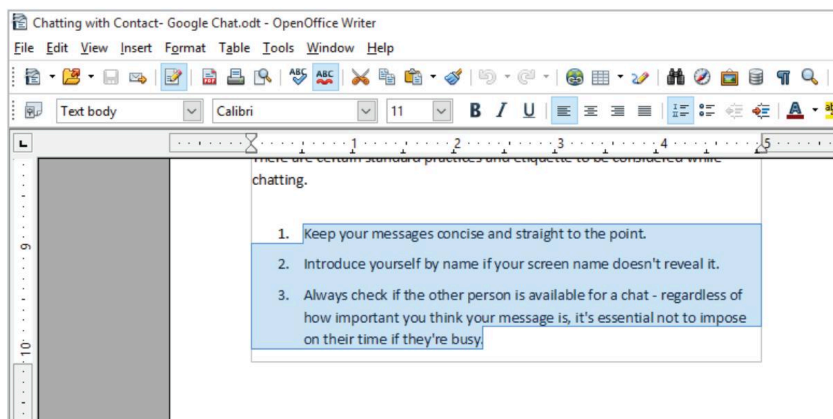

Fig. 6.2: Selecting Text

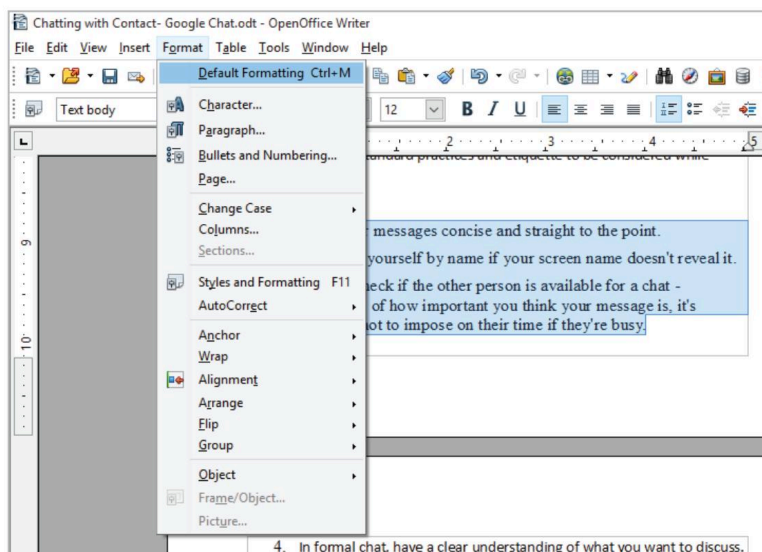

Fig. 6.3: Selecting Default Formatting Option

This step removes all the formatting that was applied to the selected text.

Common Text Formatting

OpenOffice provides a wide range of text formatting features that allow you to create professional-looking documents with ease. Some of the most common text formatting features include:

Font Type and Size You can choose from a variety of font types and sizes to change the appearance of your text.

Bold, Italics, and Underline You can use these formatting options to emphasise or highlight specific words or phrases in your text.

Alignment You can align your text left, right, centre, or justified to control the layout of your document.

Indentation You can use indentation to create a hierarchy of information in your text.

Line Spacing You can adjust line spacing to control the amount of space between lines of text.

Character Spacing You can adjust character spacing to control the distance between individual letters in your text.

Text Colour You can change the colour of your text to make it stand out or match your document's colour scheme.

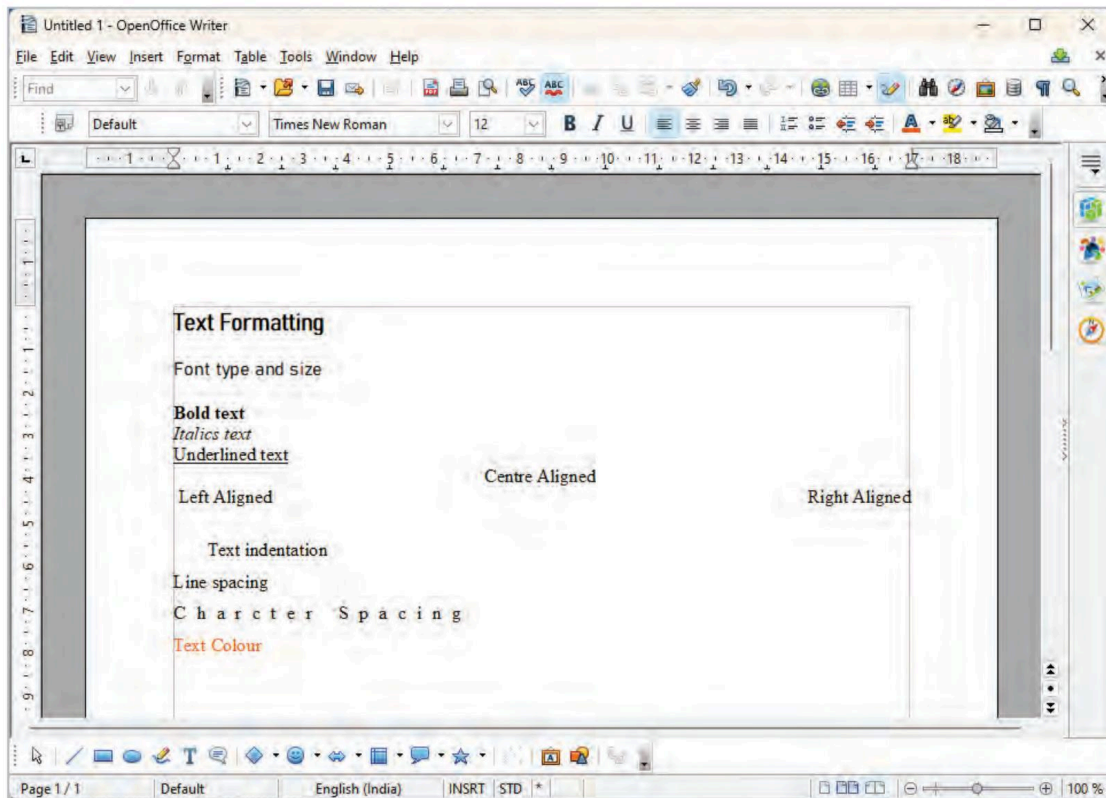

Fig. 6.4: Text Formatting Options

Changing Text Case

OpenOffice provides a convenient way to change the case of your text. With just a few clicks, you can easily change your text to capital, small, or title case. To change the text capitalisation:

1. Select the text for which you need to change the capitalisation, as shown in Fig. 6.5.

Did You Know?

Wingdings is a decorative font that was created in 1990 by Microsoft. This font is known for its symbols, which are often used in email and instant messaging.

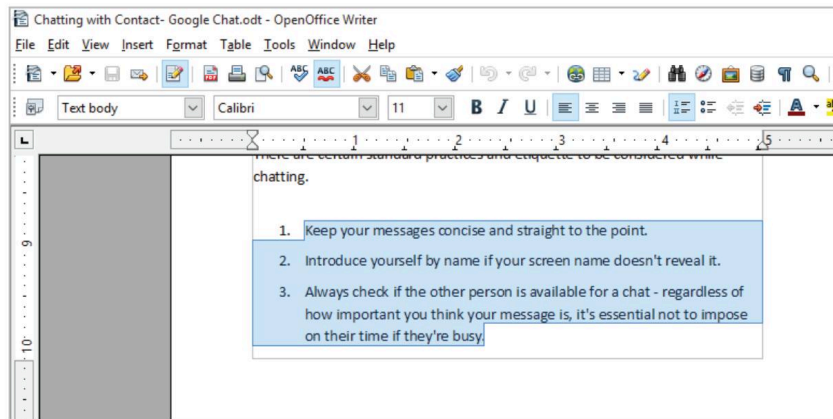

Fig. 6.5: Selecting Text

2. In the menu bar, select the **Format** menu and then select the **Change Case**, as shown in Fig. 6.6.

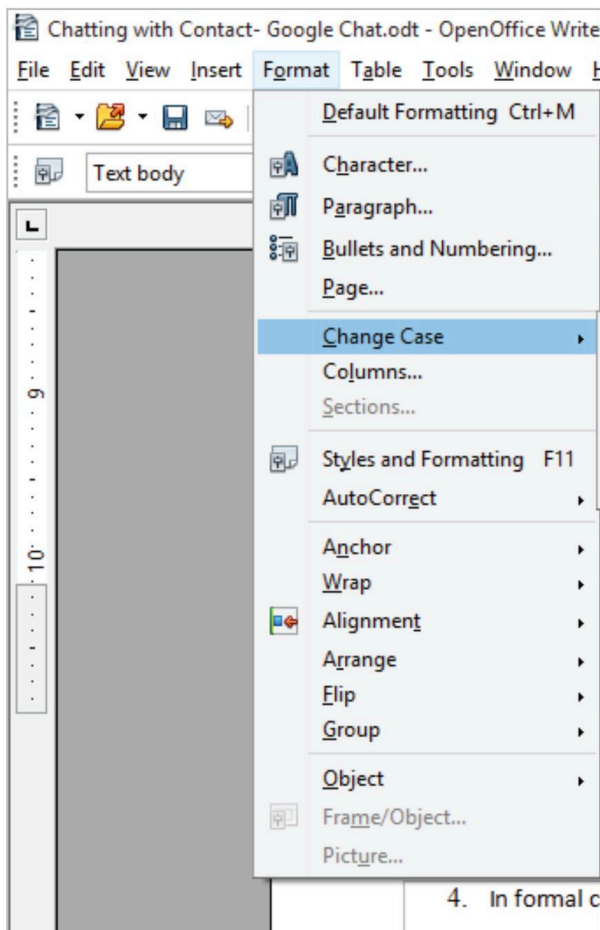

Fig. 6.6: Selecting Change Case Option

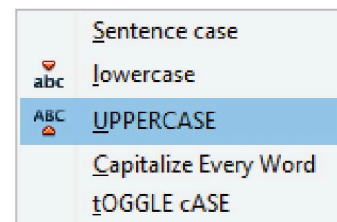

Fig. 6.7: Text Case Options

A submenu appears.

3. Select the required text case option from the submenu, as shown in Fig. 6.7.

The explanation for each option is as follows:

Sentence Case: This option capitalises the first letter of the sentence.

Lowercase: This option converts the selected text to small letters.

UPPERCASE: This option converts the selected text to capital letters.

Capitalise Every Word: This option capitalises the first letter of every word in the selected text.

TOGGLE cASE: This option changes the case of the selected text; that is, if the selected text is in small letters, then it will be converted to capital letters, and vice versa.

Superscript and Subscript

Superscript means to place the text slightly above the baseline of the text, and subscript means to place the text slightly lower than the baseline of the text. This text appears slightly smaller than the surrounding text. These options are commonly used for mathematical exponents, footnotes, chemical formulas, and mathematical subscripts.

To superscript or subscript the text:

1. Select the text and then select the **Format > Character** option from the menu bar. The **Character** dialog box opens.
3. Select the **Position** tab.
4. Select the **Superscript** or **Subscript** radio button.
5. Click **OK**.

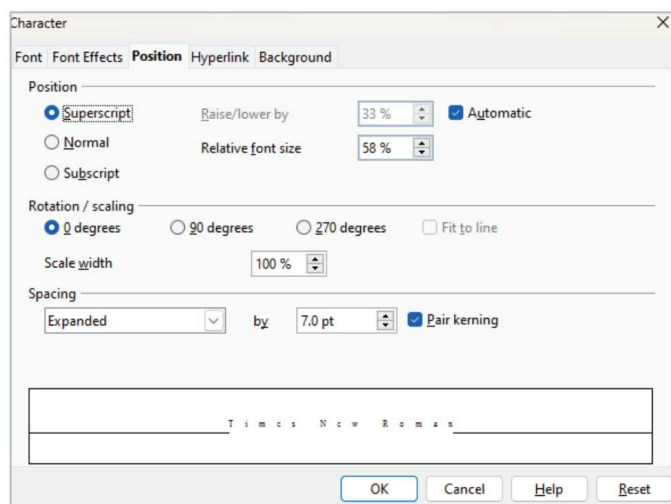

Fig. 6.8: Character Dialog Box

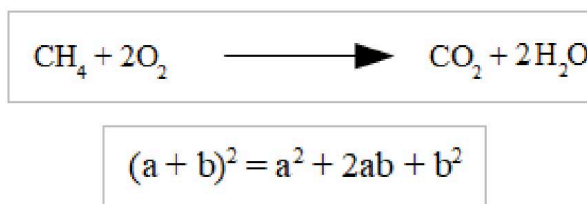

Fig. 6.9: Applying Superscript and Subscript

You can format your text as superscript by pressing the **Ctrl + Shift + P** keys. To format text as a subscript, press the **Ctrl + Shift + B** keys.

Paragraph Formatting

A paragraph is a group of words or characters. By default, a paragraph does not have any formatting. To enhance the appearance of a paragraph, you can adjust its right, left, top, and bottom margins, add borders to it, and specify the spacing between its lines of text.

Indenting Paragraphs

Indentation refers to the distance between the margin of the page and the text of the paragraph. By using indentation, you can move the complete paragraph or its first line to a specific number of places with respect to the left or right margin. Indentation helps the users understand the given document in a better way as it organises the text and gives structure to the paragraph.

There are three methods to indent the paragraph in OpenOffice Writer.

1. Using the Formatting Toolbar
2. Using the Paragraph Dialog Box
3. Using the Properties Pane

Using the Formatting Toolbar

You can indent a paragraph by clicking the **Increase Indent** icon in the **Formatting** toolbar. To indent a paragraph:

1. Select the paragraph you want to indent.
2. From the **Formatting** toolbar, click the **Increase Indent**  icon.

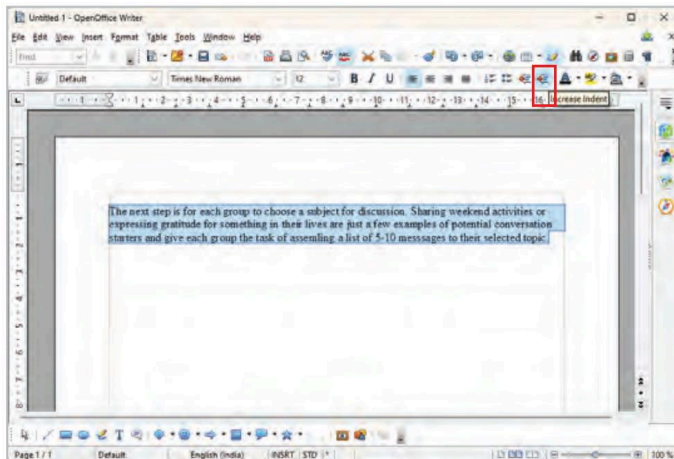

Fig. 6.10: Indenting a Paragraph

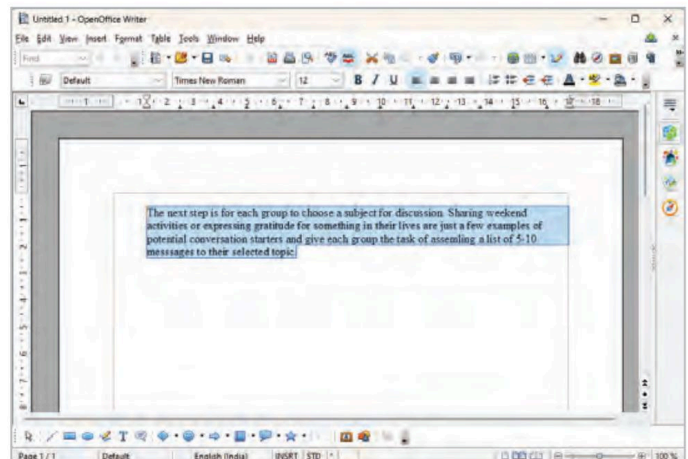

Fig. 6.11: Indented Paragraph

3. Similarly, you can use the **Decrease Indent** icon  to decrease the indent from the left-hand side.

Using the Paragraph Dialog Box

To set the indent of the paragraph:

1. Select the paragraph you want to indent.
2. Click on the **Format** menu and select the **Paragraph** option. The **Paragraph** dialog box will open.

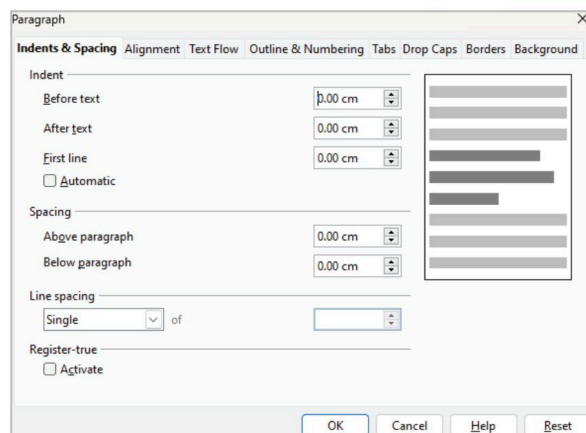

Fig. 6.12: Paragraph Dialog Box

Remember

Writer includes powerful style and template features that make it easy to apply consistent formatting throughout a document. This is especially useful for long reports or documents.

3. Notice that the **Indents & Spacing** tab is already selected.
4. Give the desired values in the **Before text**, **After text**, and **First line** spin boxes.
5. You can select the **Automatic** check box if you want the indentation to be set automatically.

Using the Properties Pane

To indent a paragraph:

1. Select the paragraph.
2. Open the **Properties** pane by clicking the **Properties** icon from the **Side bar**.
3. Under the **Paragraph** section, click the **Increase Indent** icon.
4. The text will be indented to the right.
5. To decrease the indent, click the **Decrease Indent** icon.

Aligning Paragraphs

To align paragraphs in Writer:

1. Select the paragraph you want to align.
2. Select the **Format** menu in the menu bar, and then select the **Alignment** option from the drop-down menu.
3. A submenu appears, as shown in Fig. 6.14.
4. Select the desired alignment option from the submenu.
5. The alignment is applied to the selected paragraph.

You can set the alignment of the paragraphs using the **Paragraph** dialog box also. To set the alignment:

1. Select the paragraph.
2. From the **Format** menu, select the **Paragraph** option.
3. The **Paragraph** dialog box opens.
4. Click on the **Alignment** tab.
5. From the **Options** section, select the required alignment option.
6. You can preview the effect of the selected alignment option in the Preview pane.
7. Click **OK**.
8. The selected alignment will be applied to the text.

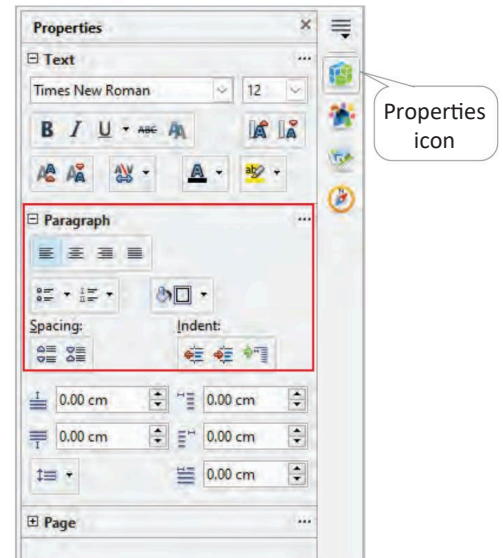

Fig. 6.13: Properties Pane

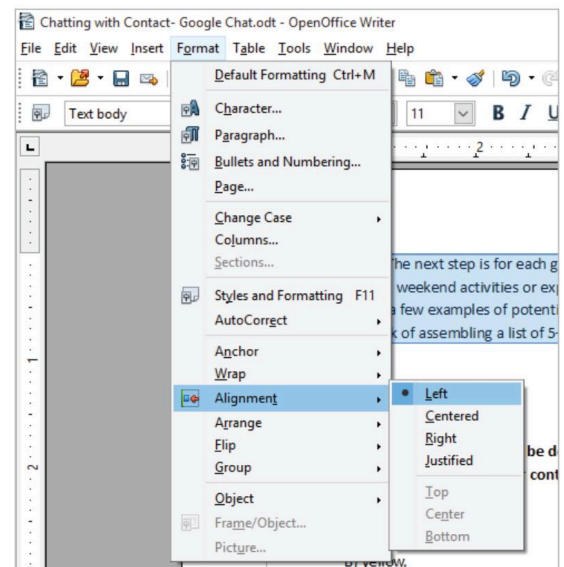

Fig. 6.14: Selecting the Left Alignment

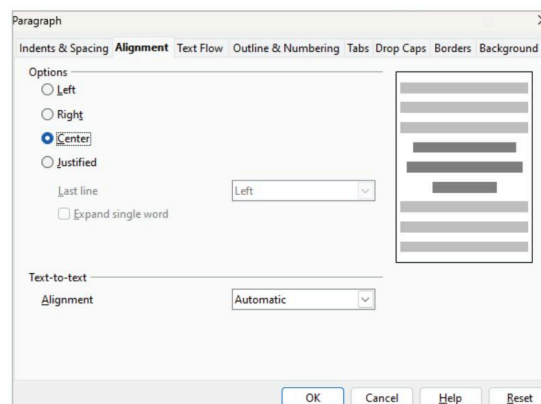

Fig. 6.15: Alignment Tab in Paragraph Dialog Box

Applying Font Colour, Highlighting, and Background Colour

You can change the font colour, highlight colour, and background colour of text in a Writer document. Let us learn how to do it.

Changing Font Colour

To change the font colour of text in a document:

1. Select the text you want to change font colour.
2. To change the font colour, click the **Font Color**  icon in the **Formatting** toolbar.
3. The **Font Color** dialog box appears.
4. Select a colour from the dialog box.
5. The selected colour will be applied to the text.

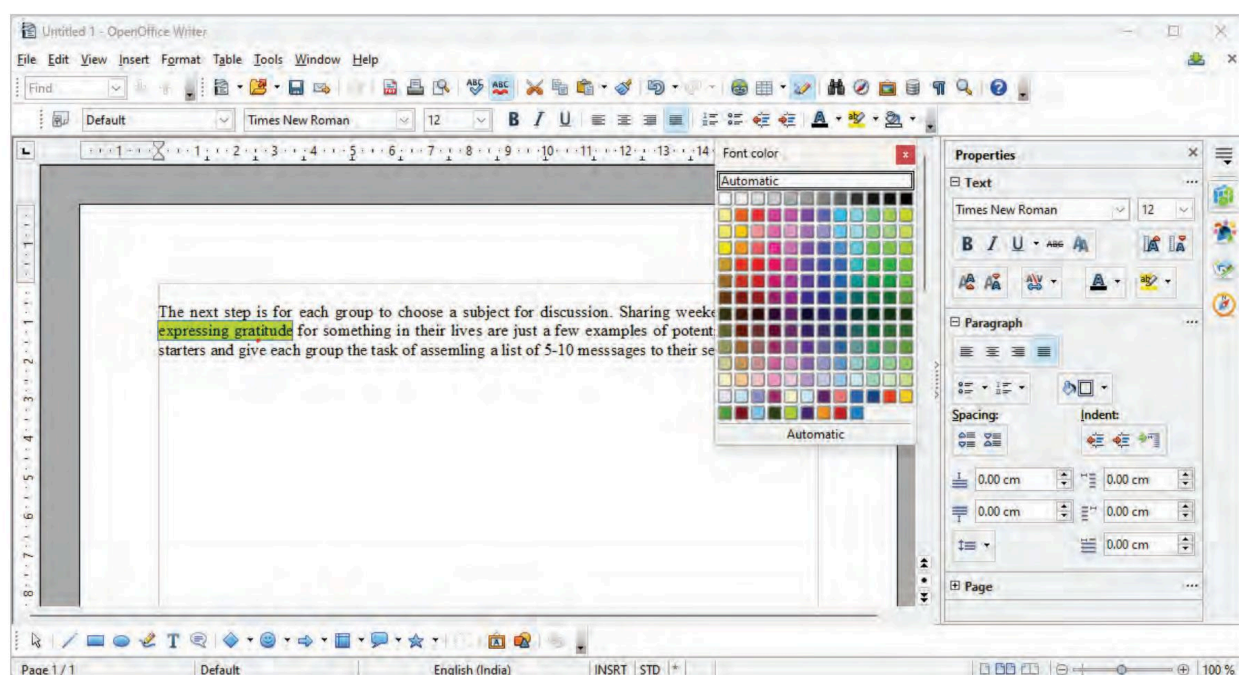

Fig. 6.16: Changing Font Colour

You can change the font colour from the **Properties** pane by clicking the **Font Color** icon under the **Text** section and selecting the desired colour from the **Font Color** dialog box.

Changing Highlight Colour

You can highlight a piece of text to draw the reader's attention to it. You can also change the highlight colour of the text by following the given steps:

1. Select the paragraph that you want to highlight.
2. Select the **Highlighting**  icon in the **Formatting** toolbar.
3. The **Highlighting** dialogue box appears, as shown in Fig. 6.17.
4. Select a colour from the dialog box.
5. The text will be highlighted with the selected colour.

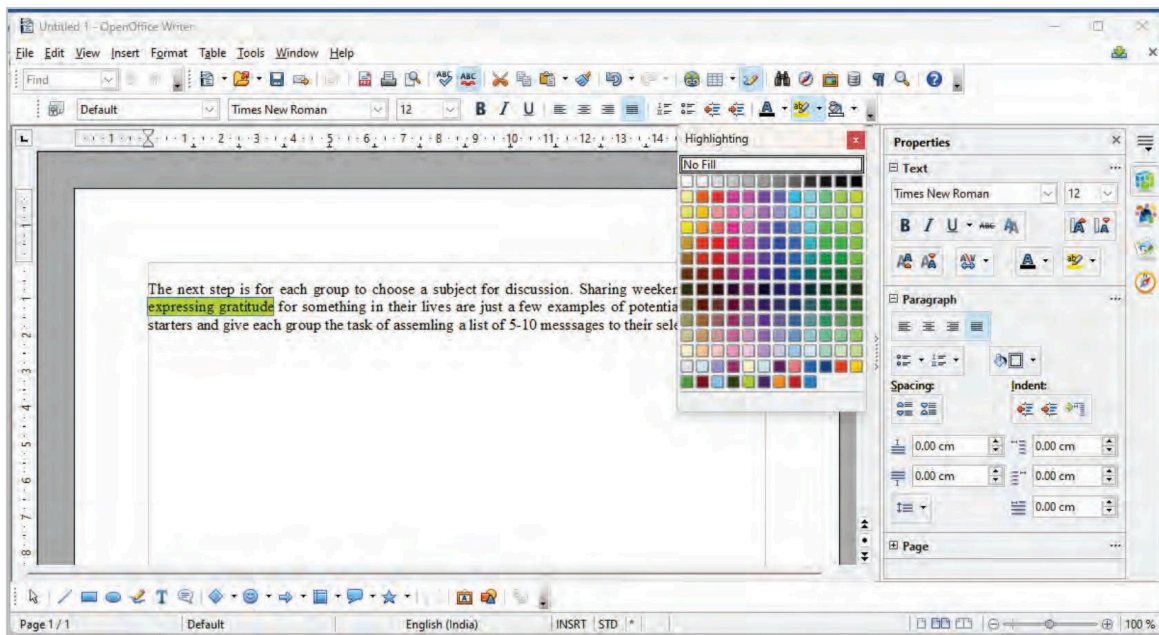

Fig. 6.17: Selecting Highlight Colour

Changing the Background Colour

To change the background colour of the entire paragraph:

1. Select the paragraph.
2. Click the **Background Color**  icon in the **Formatting** toolbar.
3. The **Background** dialog box appears, as shown in Fig. 6.18.
4. Select a colour from the dialog box.
5. The selected colour will be applied to the paragraph.

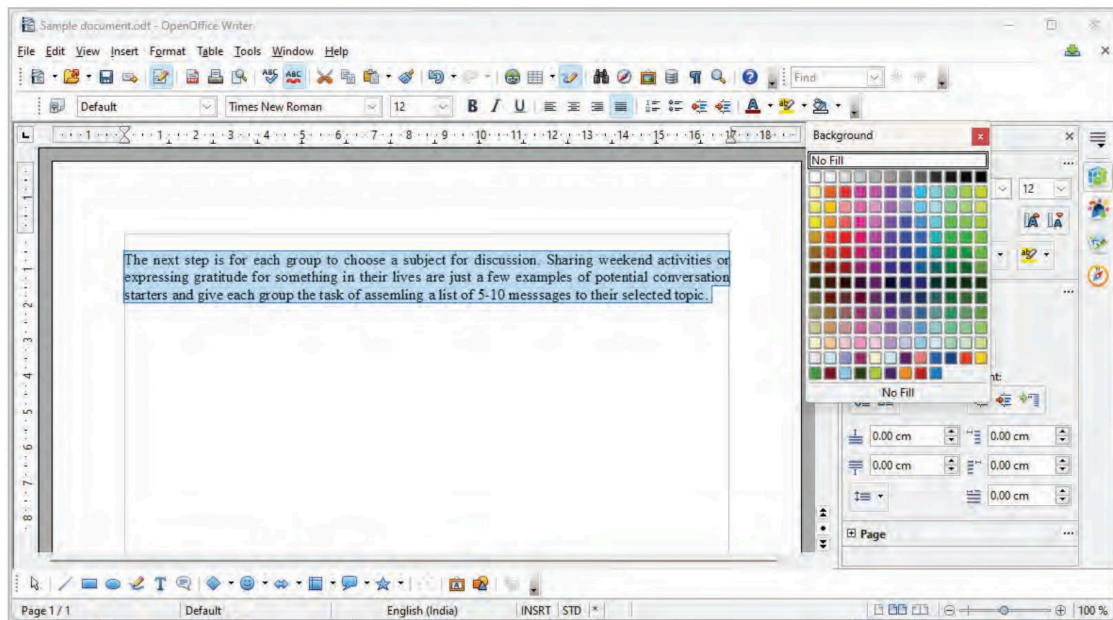

Fig. 6.18: Selecting Background Colour

Using the Bullets and Numbering

Bullets and numbering in OpenOffice Writer are used to organise information in the form of lists. Bullets are visual symbols, such as solid small circles, arrows, tick marks, and so on, that help organise and highlight textual content in a list form. Conversely, numbered lists use a variety of formats, including Roman numerals and letters of the alphabet, to organise items in a sequential order.

To create bulleted and numbered lists:

1. Place your cursor where you want to add the bullet or numbered list.
2. Select the **Format** menu in the menu bar, and then select the **Bullets and Numbering** option from the menu.
3. The **Bullets and Numbering** dialog box opens.
4. Select the desired bullet type in the **Bullets and Numbering** dialog box.
5. Click **OK**.
6. Now, in the document, type the list item and then press the **Enter** key after each item.
7. The selected bullet type or numbering will be applied to the list.

Error Alert!

Inconsistent paragraph formatting disturbs the look and appeal of your paragraph. Make sure that the paragraph styles are applied consistently.

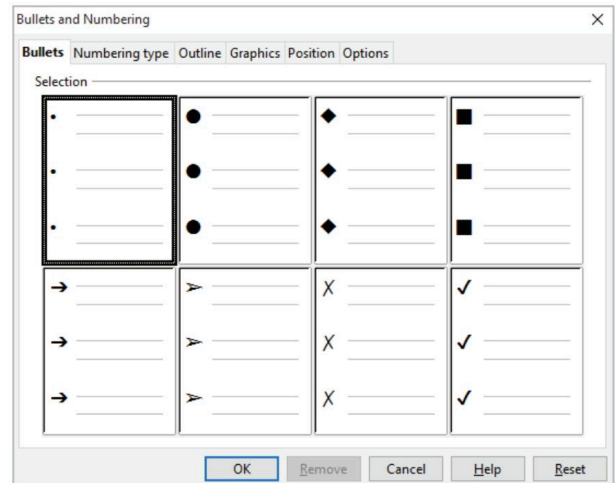

Fig. 6.19: Bullets List Type

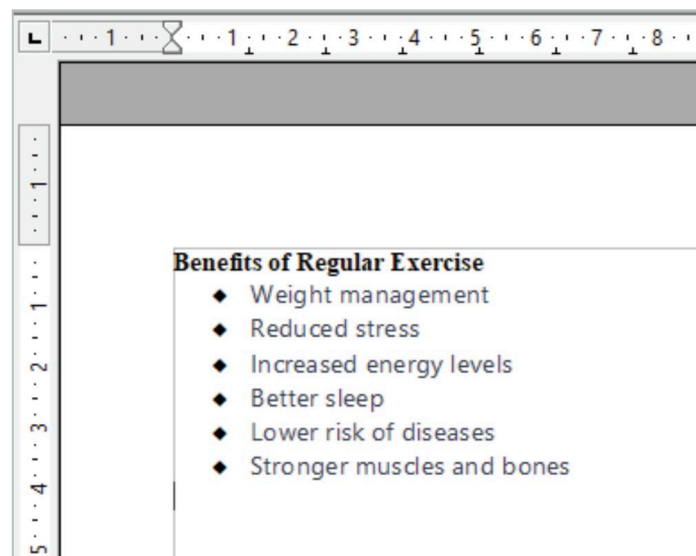

Fig. 6.20: Bulleted List

You can also create a bulleted and numbered list by clicking the **Bullets**  or **Numbering**  icons present either on the **Formatting** toolbar or in the **Properties** pane.

Creating a Nested Bulleted List

A nested bulleted list is a list within a list where you have a main or parent list with one or more subordinate or child lists. This format is useful when you need to present a hierarchical or structured set of information. Each level in the hierarchy can have its own set of bullet points.

To create a nested bulleted list:

1. Type the text, as given in Fig. 6.21.
2. Now, select the text "Time Management."
3. Select the **Format** menu in the menu bar, and then select the **Bullets and Numbering** option from the menu.
4. The **Bullets and Numbering** dialog box opens.
5. From the **Numbering type** tab, select the **Number 1. 2. 3.** option.

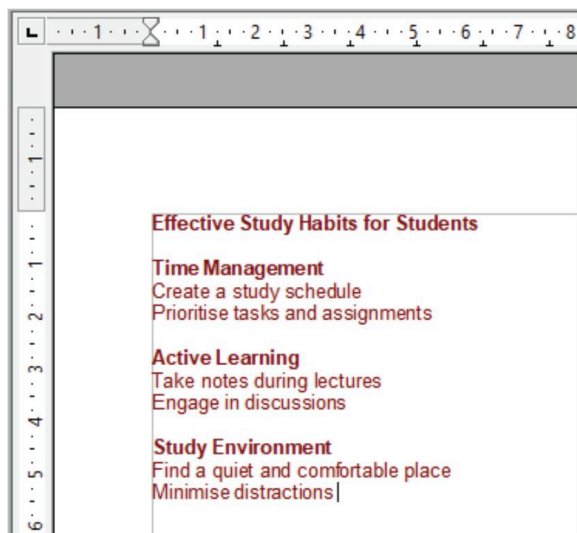

Fig. 6.21: Sample Text

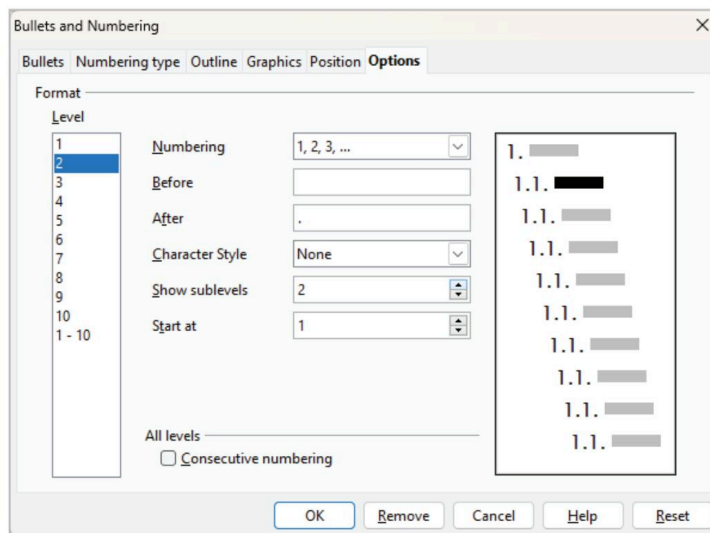

Fig. 6.22: Selecting Options Tab

6. The numbering style will be applied to the selected text.
7. Now, select the next two lines of the text.
8. Again, open the Bullets and Numbering dialog the box and select the **Options** tab.
9. In the **Show sublevels** spin box, increase the value to 2. It shows that in your list, there will be two levels of numbering.
10. Click **OK**.
11. You can observe the numbering level applied to the text.
12. Similarly, apply the same numbering style to the rest of the document.

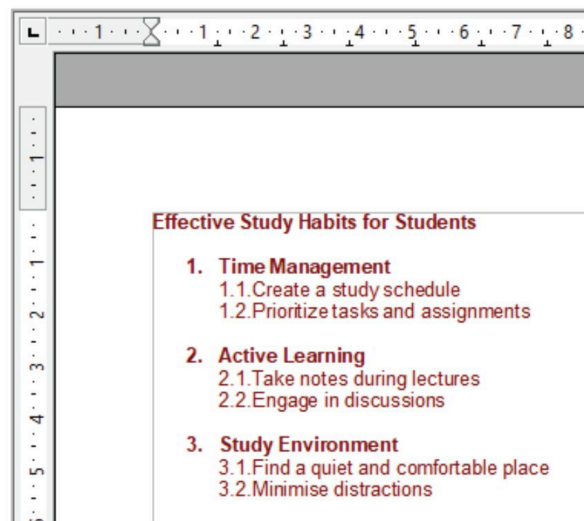

Fig. 6.23: Creating a Nested List

Changing Paragraph Style

Paragraph styles in OpenOffice are pre-defined formatting options that can be applied to paragraphs. These options allow you to define consistent formatting throughout your document and create your own custom styles. You can apply paragraph styles from the **Styles and Formatting** pane. This pane can be accessed either by selecting the **Format > Styles and Formatting** option from the menu bar or by clicking the **Style and Paragraph** button on the sidebar.

To change the paragraph style:

1. Select the paragraph or paragraphs whose style you want to change.

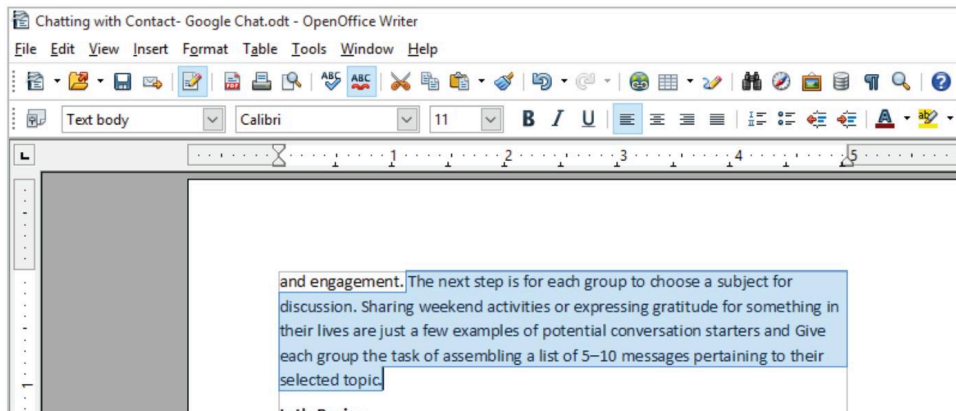

Fig. 6.24: Selecting Paragraph

2. Click the **Format** menu in the menu bar and then select the **Styles and Formatting** option.

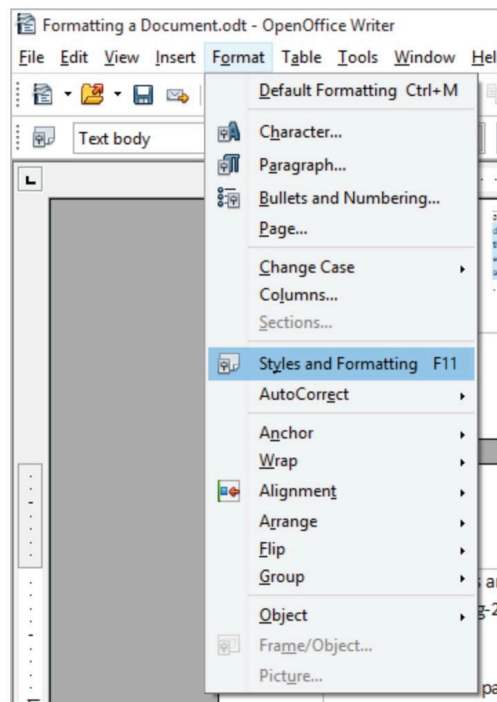

Fig. 6.25: Selecting the Styles and Formatting Option

4. The **Styles and Formatting** dialog box appears.
5. Choose the new paragraph style that you want to apply from the list of available styles. You can scroll through the list or use the search bar to find the style you want.
6. Click **New Style** to apply it to the selected text.

Did You Know?

Writer includes AutoCorrect and AutoFormat options, which can automatically correct typos and format content as you type, saving time and improving document quality.

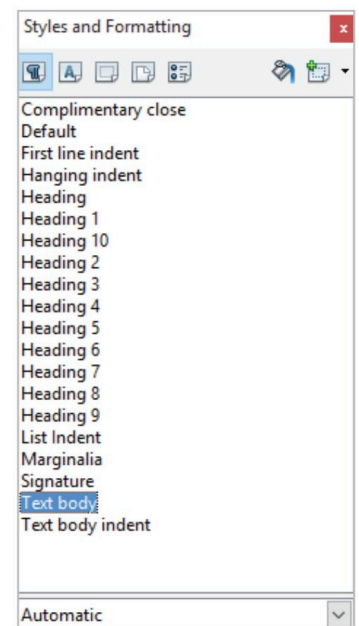

Fig. 6.26: Selecting Paragraph Style

In addition to the basic formatting options in OpenOffice, you can explore advanced features such as drop caps, borders, and shading, and hyphenation. These features can help you create more customised and professional-looking documents with improved readability.

Page Formatting

Page formatting refers to the changes made in the default settings of a page in a document. You can apply various formatting features to a page such as changing the page layout, paper size, orientation, margins, and so on. Let us learn about the various formatting options that can be applied to a page.

Setting Up a Basic Page Layout Using Styles

In OpenOffice, you can set up a basic page layout using styles to ensure consistency and professionalism throughout your document. You can format a page in OpenOffice Writer by using the **Page Style** dialog box, which you can access by selecting the **Format** menu in the menu bar and then select the **Page** option from the drop-down menu. This dialog box allows you to adjust all the page settings.

To format a page:

1. In the menu bar, click the **Format** menu and then select the **Page** option, as shown in Fig. 6.27.
2. You can find the various settings related to the page format under the Page tab in the **Page Style: Default** dialog box, such as format, height, width, orientation, margins, and page layout.
3. Give the values in different spin boxes according to your choice, and click **OK**.

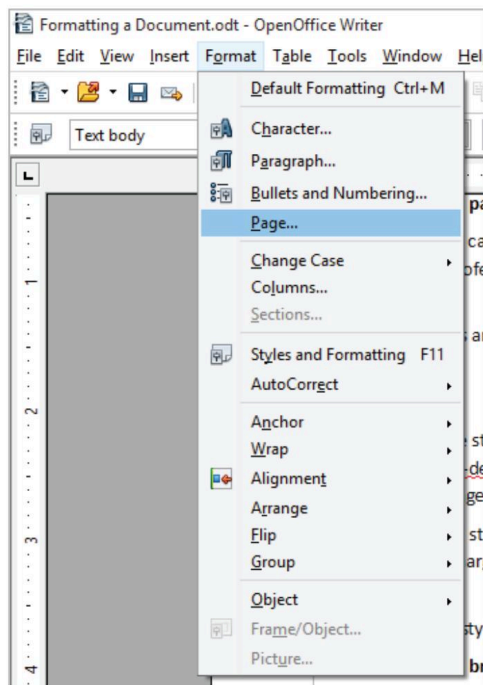

Fig. 6.27: Selecting the Page Option

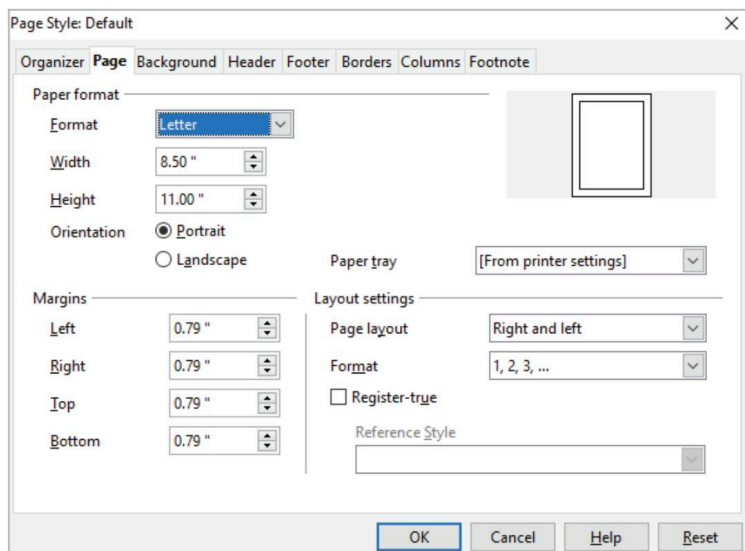

Fig. 6.28: Page Style Options

4. The page will be set according to the settings that you have selected.

Inserting a Page Break

In OpenOffice, you can easily insert a page break to start a new page within your document. A page break is useful to start the content on a new page. These are specifically used to split paragraphs across pages, control the layout of tables, and separate chapters in a document.

To insert a page break in a document:

1. Place your cursor where you want to insert the page break.
2. In the menu bar, select the **Insert** menu, and then select the **Manual Break** option, as shown in Fig. 6.29.
3. The **Insert Break** dialog box opens.
4. In the dialog box, select the **Page break** radio button to insert the page break and then click **OK**.

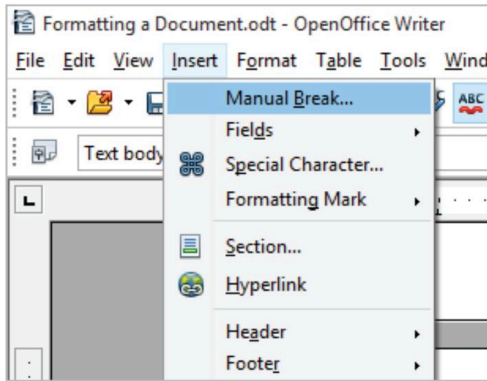

Fig. 6.29: Selecting the Manual Break Option

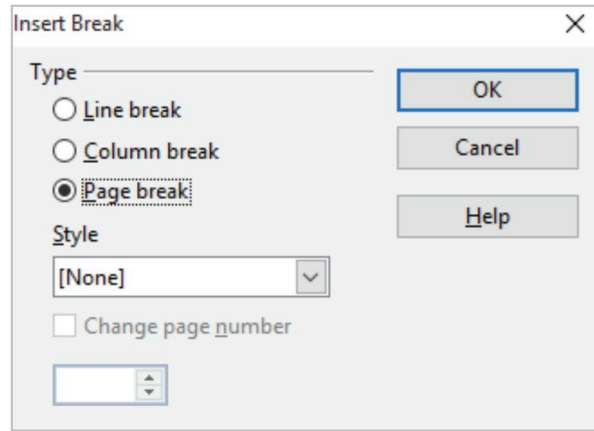

Fig. 6.30: Insert Break Dialog Box

Inserting Header or Footer

The header and the footer are the areas at the top and bottom of a page, respectively, where you can show the information that appears on every page of your document. You can use OpenOffice to insert content or information, such as page numbers, document titles, chapter titles, dates, or logos, in these areas.

To insert a header and footer in a document:

1. In the menu bar, select the **Insert** menu, and then select the **Header** or **Footer**, and then select the **Default** option to insert a header or footer into your document.
2. The cursor will start blinking inside a text box in the header or footer area.
3. Write the desired text for the header or the footer.
4. After completing it, click on the text in the document.
5. You can observe that the header and footer appear on all the pages of the document.

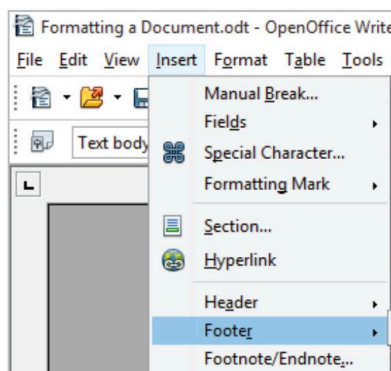

Fig. 6.31: Selecting Header or Footer

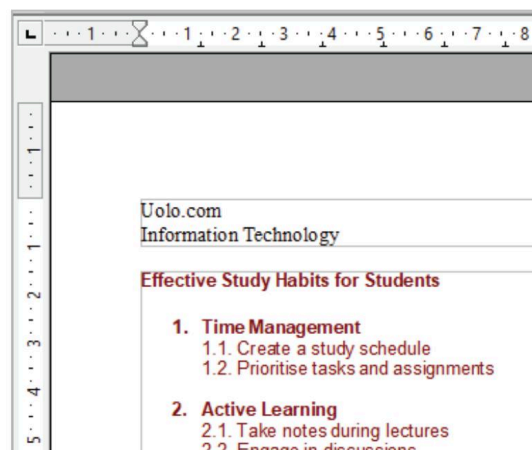

Fig. 6.32: Inserting Header

6. Type the text you want to appear in the header or footer.

The header or footer is inserted in the document.

Inserting Page Numbers

Usually, the page numbers are inserted in the footer of the page.

To insert a page number:

1. Select the **Insert** menu from the menu bar, and then select **Fields** > **Page Number** from the drop-down menu.
2. The page number is inserted on all the pages in the document.

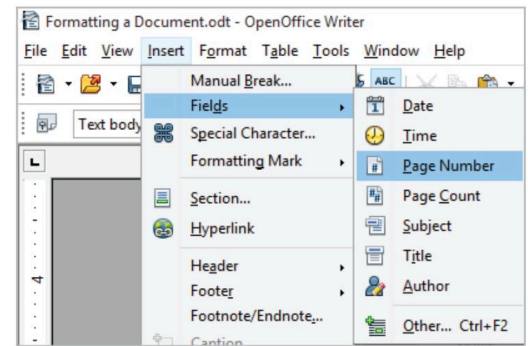

Fig. 6.33: Selecting Page Numbering

Inserting Page Borders

In OpenOffice, you can easily define borders and backgrounds to add visual effects and clarity to your text in the document. To insert page borders and backgrounds:

1. Select the **Format** menu from the menu bar, and then select the **Page** option. The **Page Style** dialog box appears.
2. Select the **Borders** tab.
3. From the **Line arrangement** section, select the required border style.
4. From the **Line** section, select the style of the border line.
5. You can also select the colour of the border line from the **Color** drop-down list.
6. From the **Spacing to contents** sections, select the margins of the border from the text with respect to all the sides.
7. You can select the shadow style, if required, from the **Shadow style** section.
8. Click **OK**.
9. The border with the specified settings is added to the page.

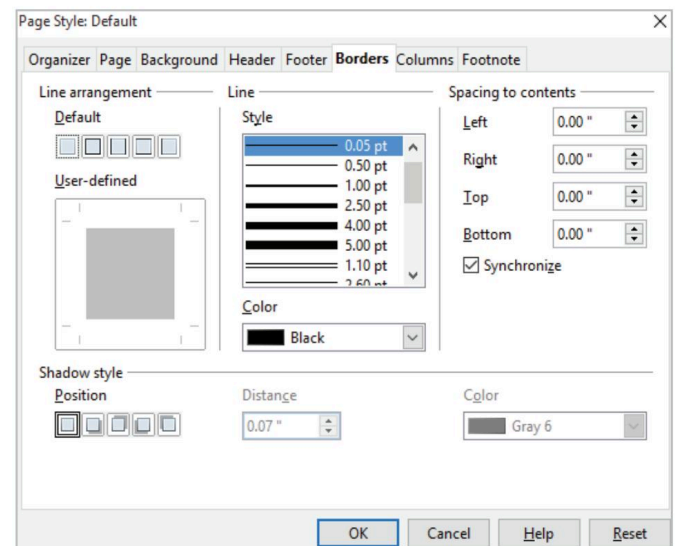

Fig. 6.34: Specifying Border Settings

Applying Background Colour

You can apply the background colour to the whole page, too.

To apply the background colour:

1. Select the **Format** menu from the menu bar, and then select the **Page** option. The **Page Style** dialog box appears.
2. Select the **Background** tab.
3. The colour palette in the **Background** tab will open.
4. Select the desired colour from the colour palette.
5. The background colour will be applied to the page.

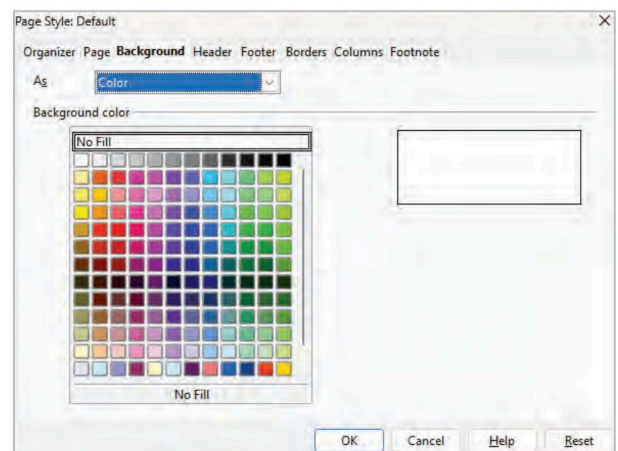

Fig. 6.35: Selecting Background Colour

Inserting Images

In OpenOffice, you can easily insert images, shapes, and special characters into a document. To insert images in a document:

1. Select the **Insert** menu from the menu bar, and then select **Picture > From File** option.
2. The **Insert picture** dialog box appears.
3. Navigate to the location where the picture file is saved.
4. Select the picture, and then click **Open** to insert the picture into the document.

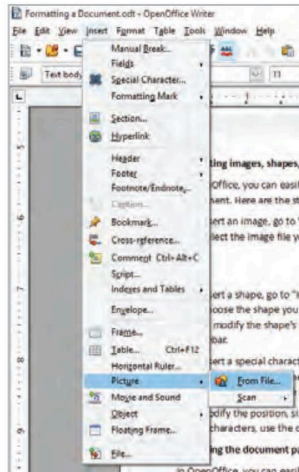

Fig. 6.36: Selecting the Picture Option

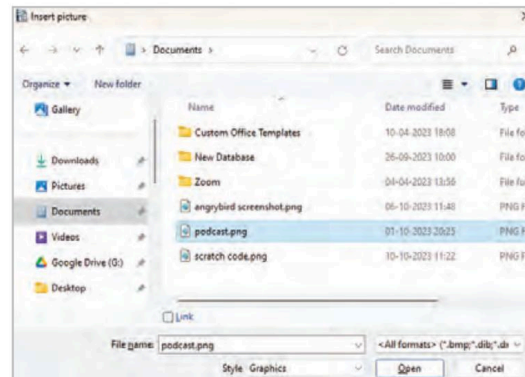

Fig. 6.37: Insert Picture Dialog Box

Inserting Shapes

To insert a shape in a document:

1. Select the **View** menu from the menu bar, and then select the **Toolbar > Drawing** options. The **Drawing** toolbar appears.
2. Select the desired shape from the **Drawing** toolbar.
3. Move the cursor to the document area.
4. Draw the shape by keeping the left button of the mouse pressed, as shown in Fig. 6.38.

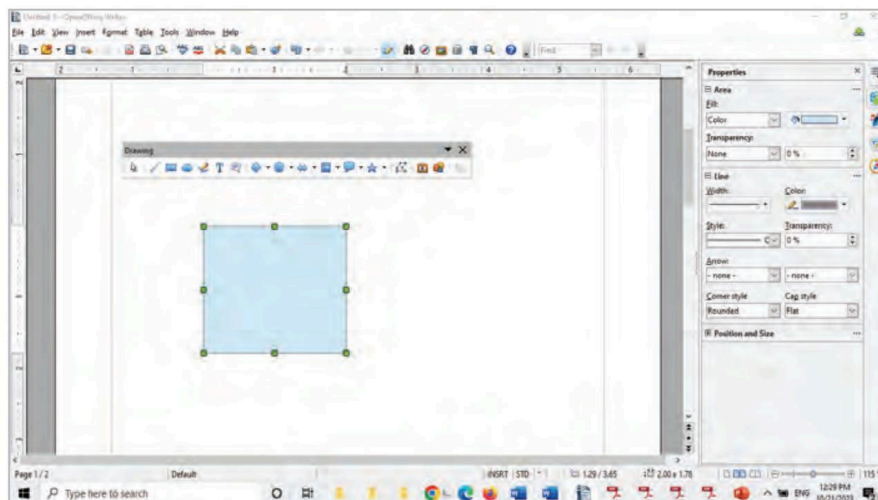

Fig. 6.38: Inserting Shape

Formatting a Shape or an Image

In OpenOffice, you can easily format shapes and images to enhance the overall look of your document. To format a shape or an image in the document:

1. Select the shape or image you want to format.
2. In the **Properties** pane, select the various options to adjust the size, position, and other properties of the shape or image, as shown in Fig. 6.39 and Fig. 6.40.

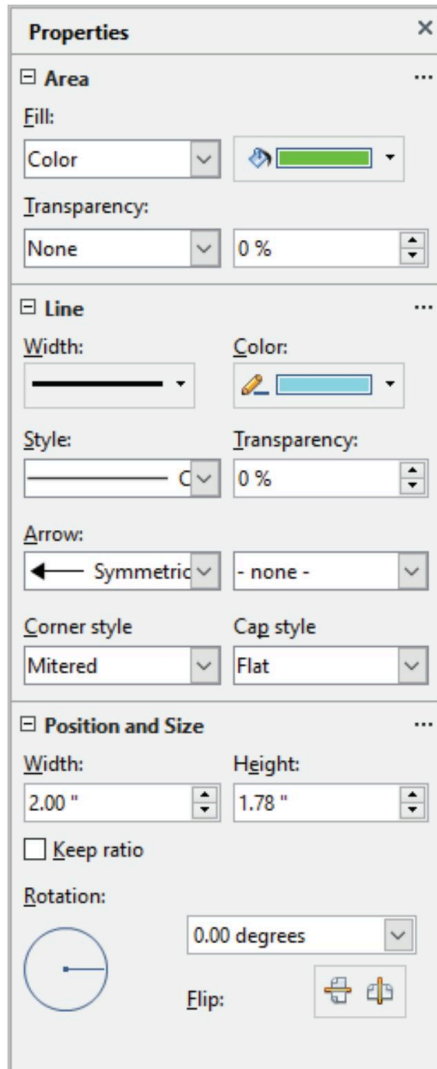

Fig. 6.39: Displaying Shape Setting Options

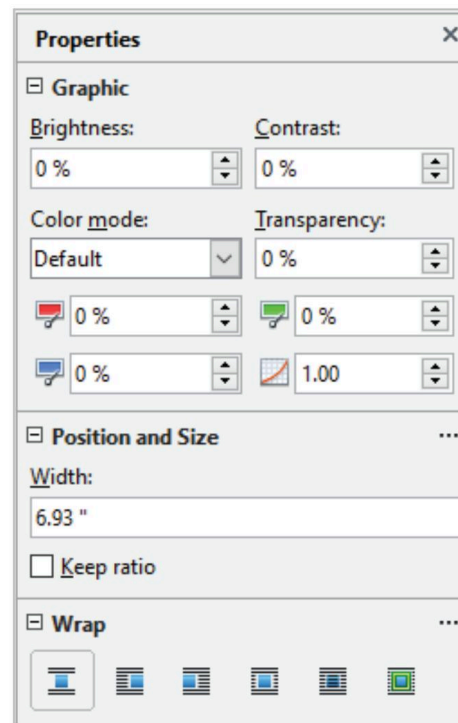

Fig. 6.40: Displaying Image Setting Options

Inserting Special Characters

To insert a special character in a document:

1. Click the **Insert** menu from the menu bar and then select the **Special Character** option, as shown in Fig. 6.39.
2. The **Special Characters** dialog box appears.
3. Select a special character in the **Special Characters** dialog box and then click **OK**.
4. The special character is inserted in the document.

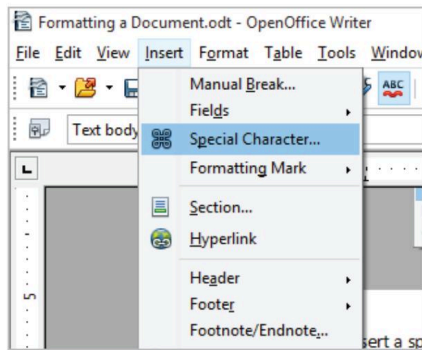

Fig. 6.41: Selecting Special Character Option

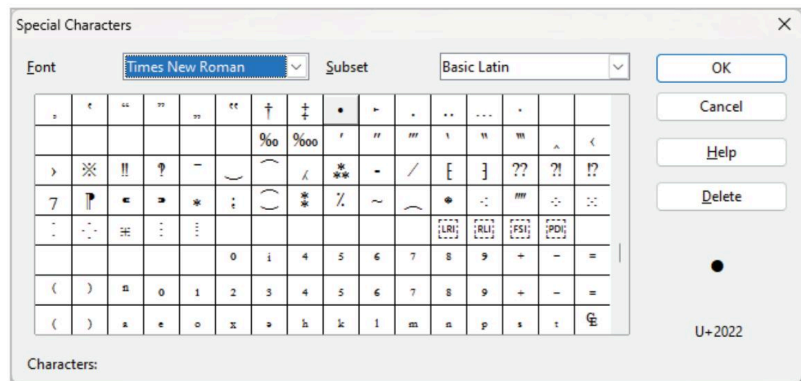

Fig. 6.42: Special Characters Dialog Box

Dividing the Document Page Into Columns

In OpenOffice, you can easily divide your document page into columns to create a more visually appealing layout. This layout is usually seen in newspapers, magazines, research papers, etc. To divide a page into columns:

1. Place your cursor where you want to insert the columns.
2. In the menu bar, click the **Format** menu and then select the **Columns** option, as shown in Fig. 6.43.

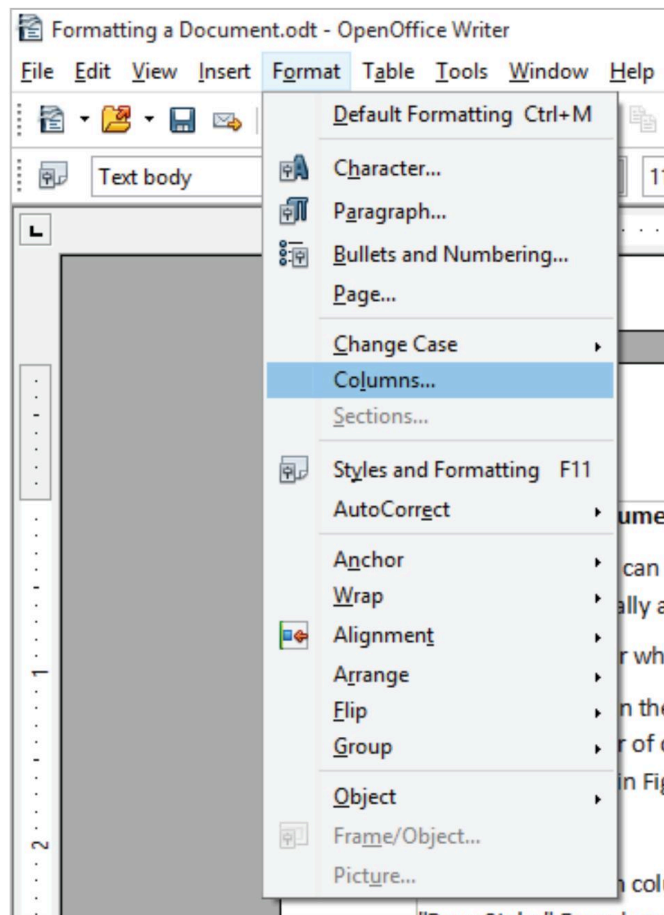

Fig. 6.43: Selecting Columns Option

3. The **Columns** dialog box opens.
4. Select the number of columns, the spacing between columns, and other options in the **Columns** dialog box, and then click **OK**, as shown in Fig. 6.44.

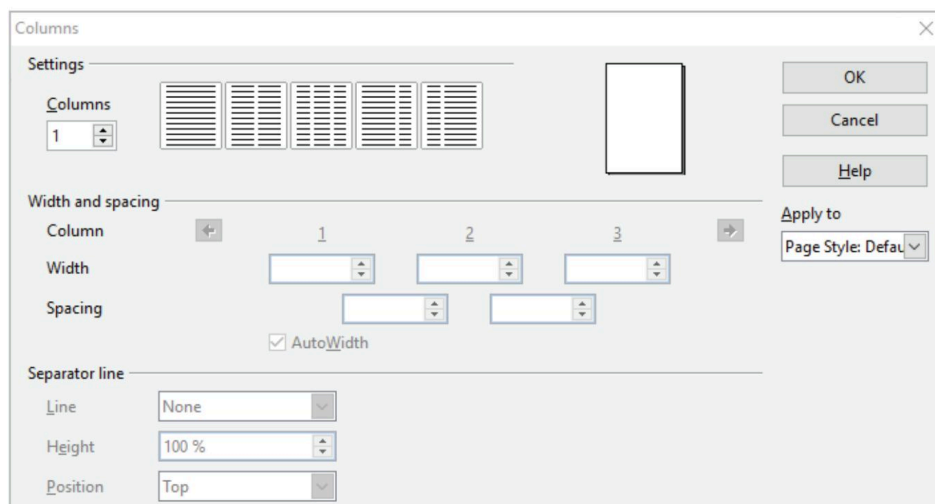

Fig. 6.44: Specifying Column Settings

Activity Time

Activity 1: Formatting Document

(Group Work)

Make a group of 2 to 3 students and do the following tasks:

- Create a new document and type a short paragraph. Apply text formatting options such as bold, italic, or underline, and various font styles.
- Change the text colour and then adjust the font size for specific words within the paragraph.

Activity 2: Creating List

(Individual Work)

Create a list of three items in your document and apply numbering or bullet points to format the list. Adjust the line spacing between paragraphs to define the document layout and apply the indentation settings.

Activity 3: Creating Document

(Individual Work)

Create a document on the topic 'Stress Management'. Apply the page formatting options, such as paper size, orientation, margins, background colour, border, and so on.

Chapter Checkup

A Select the correct option.

- 1 What is the purpose of the Page Style dialog box in OpenOffice Writer?
 - a To format text
 - b To insert headers and footers
 - c To control page layout and formatting
 - d To add page borders and shading
- 2 Which keyboard combination can be used to remove formatting from selected text in OpenOffice?
 - a Ctrl + B
 - b Ctrl + M
 - c Ctrl + U
 - d Ctrl + I
- 3 What is the purpose of the superscript and subscript formatting options in OpenOffice?
 - a To change the font colour
 - b To format paragraphs
 - c To raise or lower text and reduce its size compared to the normal text
 - d To the change text case

B Fill in the blanks with the most suitable words.

- 1 In the document, by default, the text is aligned to the _____.
- 2 You can insert a page break in OpenOffice by selecting the Insert menu and the _____ option.
- 3 Headers and footers in OpenOffice are used to insert content or information that you want to appear on the _____ page of your document.
- 4 To format text in OpenOffice, you can use the _____ toolbar.

C State whether the following is *True* or *False*. Correct the statements that are false.

- 1 The Superscript formatting option in OpenOffice is typically used for mathematical exponents.
- 2 To divide a document page into columns, you can use the Change Case feature in OpenOffice.
- 3 The top and bottom positions hold the text for headers and footers in documents.
- 4 OpenOffice provides pre-defined paragraph styles that allow you to define consistent formatting throughout your document.

D Answer the following questions. (*Solved*)

Q1. What do you mean by formatting? How does OpenOffice Writer help you format a document?

A1. Formatting a document is an essential part of creating professional-looking content. OpenOffice makes it easy to format your documents with its powerful formatting tools. Whether you are working on a report, a letter, or a presentation, OpenOffice provides a wide range of formatting options to help you make your document stand out.

Q2. Differentiate between subscript and superscript using one example of each.

A2. Superscript means to place the text slightly above the baseline of the text, and subscript means to place the text slightly lower than the baseline of the text. This text appears slightly smaller than the surrounding text.

Example of Subscript: $\text{CH}_4 + 2\text{O}_2 \longrightarrow \text{CO}_2 + 2\text{H}_2\text{O}$

Example of Superscript: $(a + b)^2 = a^2 + 2ab + b^2$

Q3. Sushmita wants to create a bulleted list in her document. How can she do it?

A3. To create a bulleted list in a document:

- Place your cursor where you want to add the bulleted list.
- Select the **Format** menu from the menu bar, and then select the **Bullets and Numbering** option.
- The **Bullets and Numbering** dialog box appears.
- Select the desired bullet type, and then click **OK**.

Answer Key

A 1. c 2. b 3. c

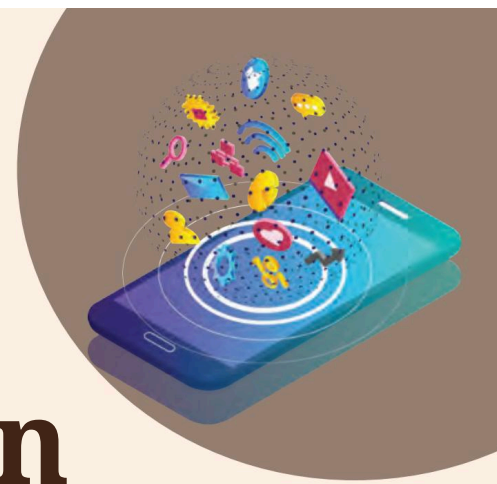

B 1. Left 2. Manual Break 3. Every 4. Formatting

C 1. True.

2. False. Corrected Statement: To divide a document page into columns, you can use the **Format > Columns** feature in OpenOffice.

3. True.

4. True.

7

Creating Tables in a Document

Creating tables in a document is a fundamental skill that every student should know. It is particularly useful when you need to organise and present data in a structured format.

A **table** is a combination of rows and columns. The intersection of a row and a column is called a **cell**. Tables can be used for various purposes, such as creating schedules and organising information in a clear and easy-to-read manner.

In this chapter, we will explore how to work with tables in OpenOffice Writer. By the end of this chapter, you will understand how to create tables and customise them according to your needs. So, let us get started.

Creating a Table

There are many methods in Writer to create a table:

1. Using the **Table** icon from the **Standard** toolbar
2. Using the **Table** menu from the menu bar
3. Using the **Insert** menu from the menu bar
4. Using the **Ctrl+F12** shortcut key

Let us learn about these methods one by one.

Using the Table Icon From the Standard Toolbar

To create a table by using the **Table** icon from the **Standard** toolbar:

1. Open a new or existing document in Writer and place the cursor where you want to insert the table.
2. Click the drop-down arrow of the **Table**  icon on the **Standard** toolbar. A grid will open, as shown in Fig. 7.1.

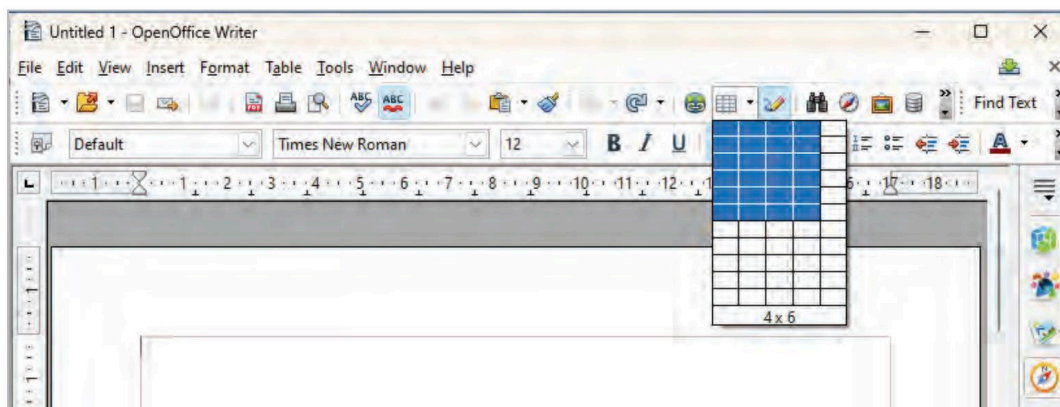

Fig. 7.1: Using the Table Icon From the Standard Toolbar

3. Select the number of rows and columns as required by hovering the mouse pointer on the grid.
4. Click the last cell of the grid, and the table will appear in the document.

Using the Table Menu From the Menu Bar

To create a table by using the Table menu:

1. Open a new or existing document in Writer and place the cursor where you want to insert the table.
2. Select the **Table** menu in the menu bar.
3. Select the **Insert > Table** option from the menu, as shown in Fig. 7.2.
4. The **Insert Table** dialog box appears.
5. Select the number of rows and columns you want in your table, as shown in Fig. 7.3, and then click **OK** to insert the table into your document.

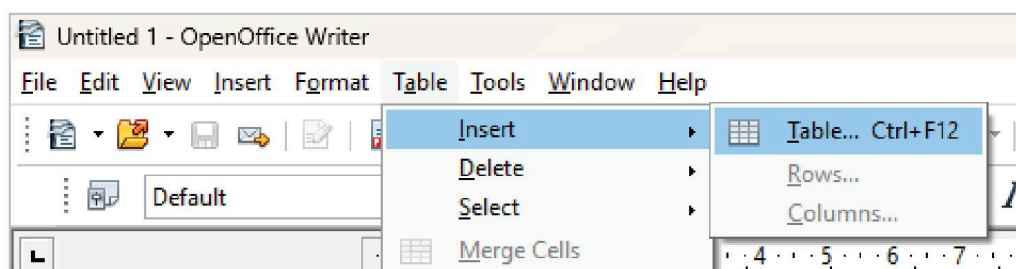

Fig. 7.2: Using Table Menu from the Menu Bar

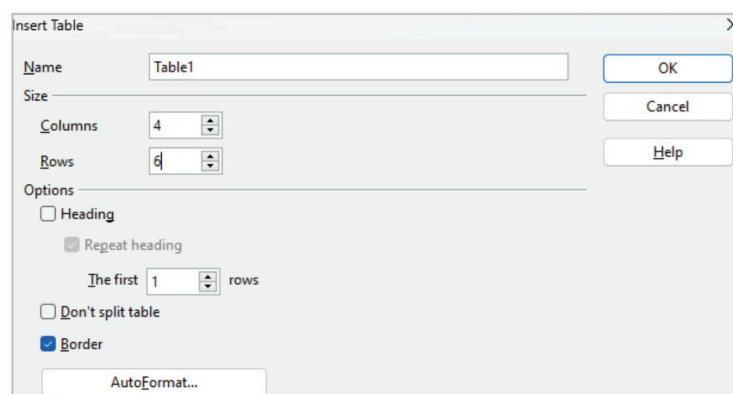

Fig. 7.3: Insert Table Dialog Box

Using the Insert Menu From the Menu Bar

To create a table using the Insert menu:

1. Open a new or existing document in Writer and place the cursor where you want to insert the table.
2. Select the **Insert** menu in the menu bar.
3. Select the **Table** option from the menu, as shown in Fig. 7.4.

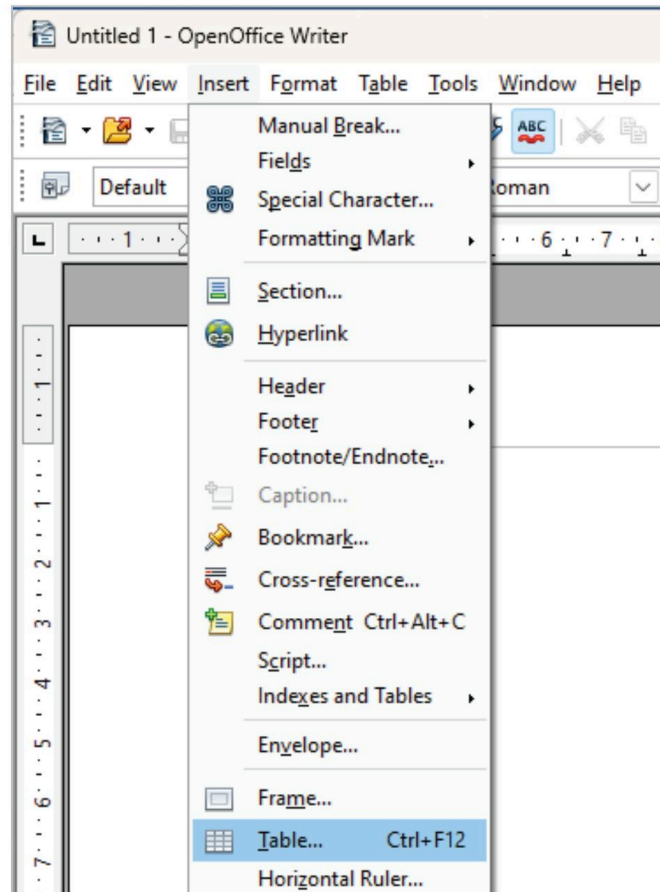

Fig. 7.4: Using Insert Menu From the Menu Bar

4. The **Insert Table** dialog box appears.
5. Select the number of rows and columns you want in your table, and then click **OK**.
6. The table will appear in the document.

Using the Ctrl + F12 Shortcut Key

To create a table using the Ctrl + F12 Shortcut Key:

1. Open a new or existing document in Writer and place the cursor where you want to insert the table.
2. Press the **Ctrl+F12** key combination.
3. The **Insert Table** dialog box appears.
4. Select the number of rows and columns you want in your table, and then click **OK**.
5. The table will appear in the document as shown in Fig. 7.5.

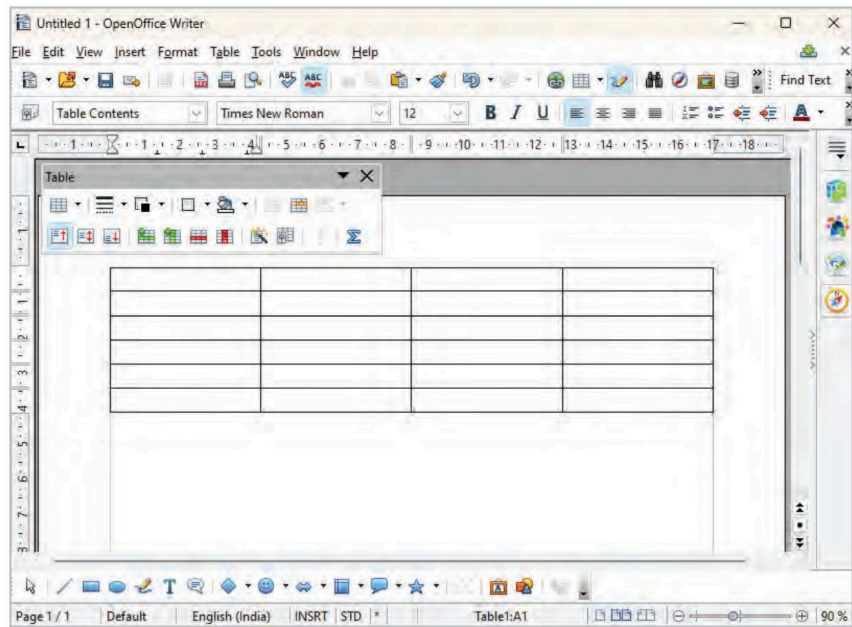

Fig. 7.5: Inserted Table

6. Observe that after the table is inserted, the floating **Table** toolbar appears in the document area. It contains several table formatting tools.

Entering Data in a Table

To enter data in a table, click inside the cell and start typing. You can move around a table in the following ways:

1. You can use the arrow keys to move to the adjacent cells.
2. You can also use the **Tab** key to move to the next cell in a row.
3. To move to the previous cell in a row, you can use the **Shift+Tab** key.

The table after entering data is as shown in Fig. 7.6.

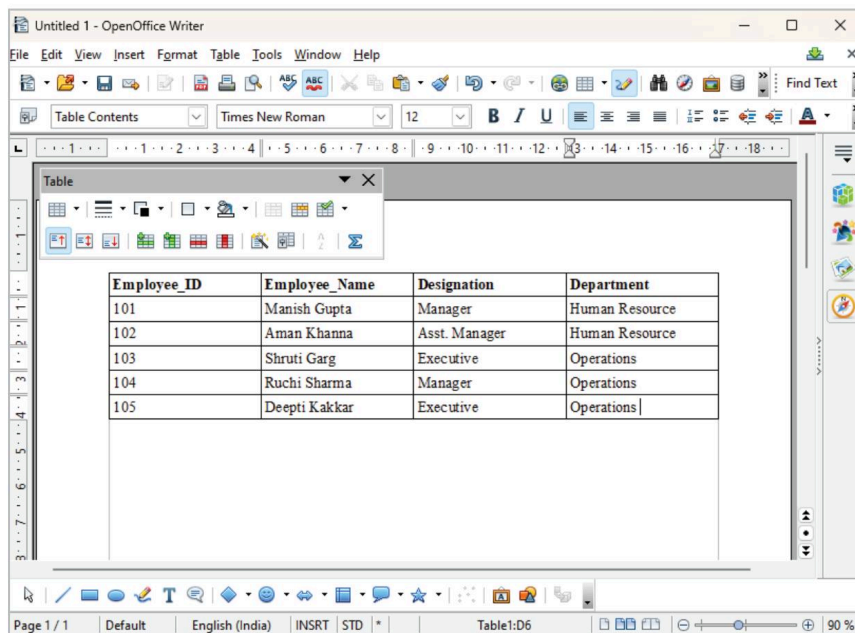

Fig. 7.6: Inserted Data in a Table

Inserting Rows and Columns

Once you have created a table in Writer, you may need to insert additional rows or columns to accommodate new data. Let us know about the steps to insert rows and columns.

Inserting Rows

To insert rows in a table:

1. Place the cursor in the row where you want to insert a new one.
2. Select the **Table** menu from the menu bar, then select the **Insert** option.
3. From the extended menu, select the **Rows** option.
4. The **Insert Rows** dialog box appears.
5. Type the number of rows you want to insert.
6. Select the **Position** radio button for the **Before** or **After** option.
7. Click **OK**. The entered number of rows will be added.

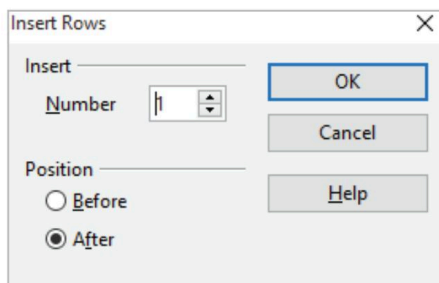

Fig. 7.7: The Insert Rows Dialog Box

Employee_ID	Employee_Name	Designation	Department
101	Manish Gupta	Manager	Human Resource
102	Aman Khanna	Asst. Manager	Human Resource
103	Shruti Garg	Executive	Operations
104	Ruchi Sharma	Manager	Operations
105	Deepti Kakkar	Executive	Operations

Fig 7.8: Inserted a New Row

Inserting Columns

To insert columns in a table:

1. Place the cursor in the column where you want to insert a new one.
2. Select the **Table** menu from the menu bar, then select the **Insert** option.
3. From the extended menu, select the **Columns** option.
4. The **Insert Columns** dialog box appears.
5. Type the number of columns you want to insert.
6. Select the **Position** radio button for the **Before** or **After** option.
7. Click **OK**. The entered number of columns will be added.

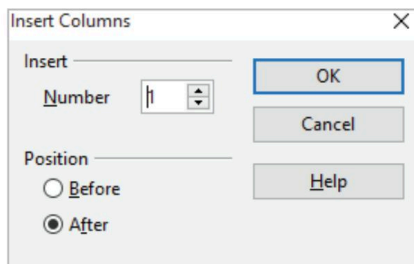

Fig. 7.9: The Insert Column Dialog Box

Employee_ID	Employee_Name	Designation		Department
101	Manish Gupta	Manager		Human Resource
102	Aman Khanna	Asst. Manager		Human Resource
103	Shruti Garg	Executive		Operations
104	Ruchi Sharma	Manager		Operations
105	Deepti Kakkar	Executive		Operations

Fig. 7.10: Inserting a New Column

Deleting Rows and Columns

You can delete the rows and columns from a given table. Let us look at the steps for deleting a row or a column.

Deleting Rows

To delete a row:

1. Place the cursor in the row you want to delete.
2. Select the **Table** menu from the menu bar.
3. Select the **Delete > Rows** option.
4. The row will be deleted.

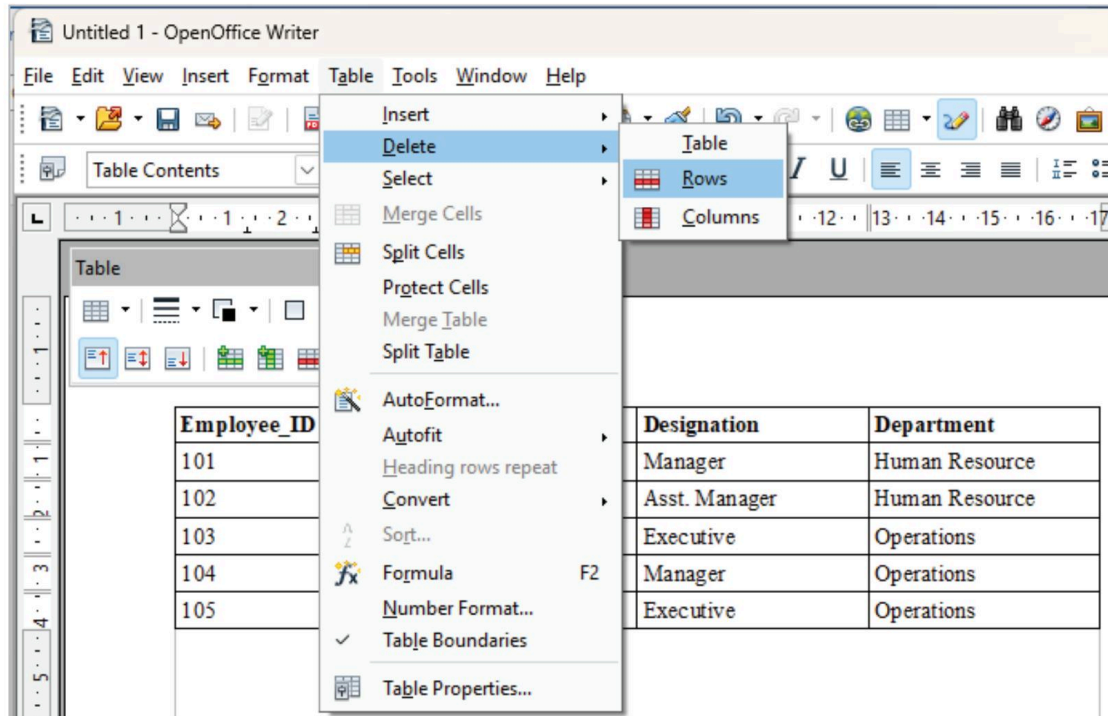

Fig. 7.11: Selecting Delete > Rows Option

Employee_ID	Employee_Name	Designation	Department
101	Manish Gupta	Manager	Human Resource
102	Aman Khanna	Asst. Manager	Human Resource
104	Ruchi Sharma	Manager	Operations
105	Deepti Kakkar	Executive	Operations

Fig. 7.12: Deleted Row

Deleting Columns

To delete a column:

1. Place the cursor in the column you want to delete.
2. Select the **Table** menu from the menu bar.
3. Select **Delete > Columns**.

4. The column will be deleted.

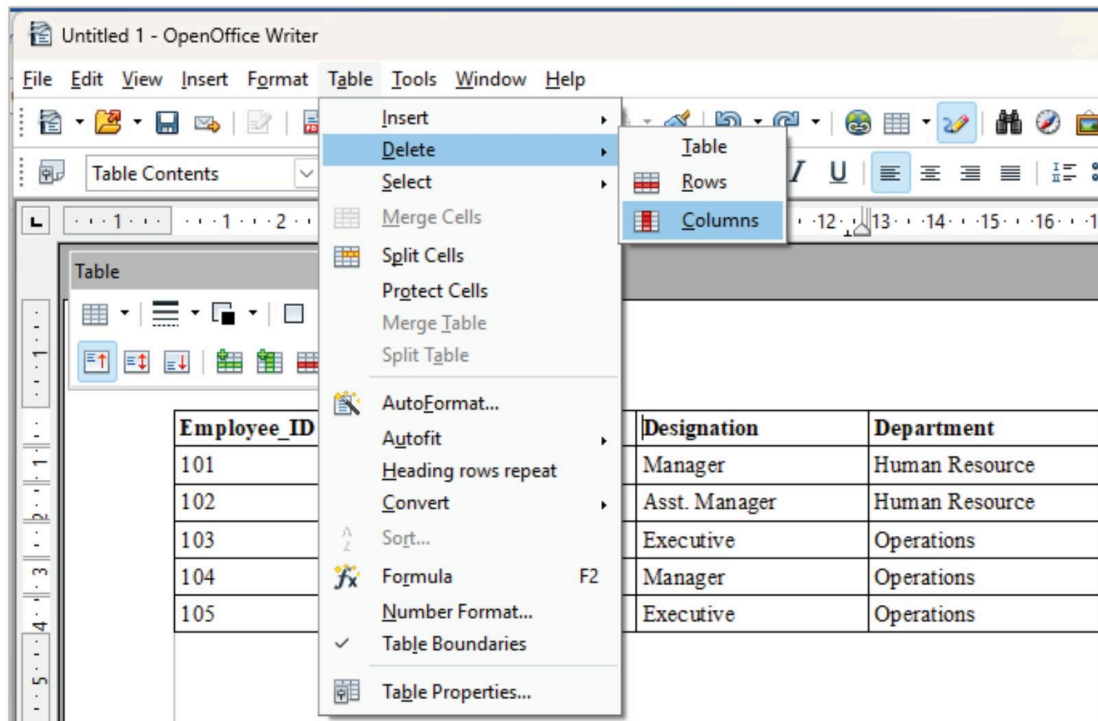

Fig. 7.13: Selecting Delete > Columns

Employee_ID	Employee_Name	Department
101	Manish Gupta	Human Resource
102	Aman Khanna	Human Resource
103	Shruti Garg	Operations
104	Ruchi Sharma	Operations
105	Deepti Kakkar	Operations

Fig. 7.14: Deleted Column

Splitting and Merging Tables

Splitting a table means to divide it into two parts, and merging means to combine two tables to form a new table. Let us see how to split or merge tables.

Splitting Tables

To split a table into two parts, you need to select the row from which you want to start the new table. For this:

1. Select the cell from which you want to split the table.
2. Select **Table > Split**.

OR

Right-click the cell and select the **Split Table** option from the context menu.

3. The **Split Table** dialog box appears.

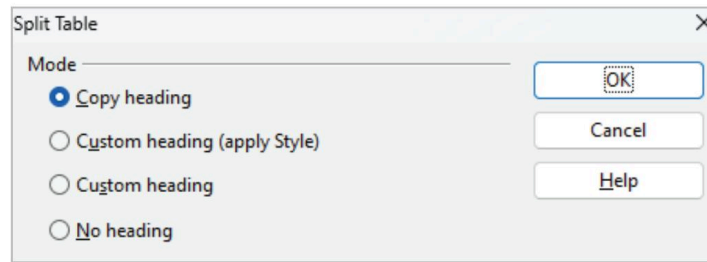

Fig. 7.15: Split Table Dialog Box

4. Select the **Copy heading** option from the **Mode** section if you want to keep the same heading in the split table.
5. You can also select the **Custom heading** or **No heading** options to either modify the heading or not give any heading to the split table.
6. Click **OK**.
7. The table will be split into two parts, as shown in Fig. 7.16.

Employee_ID	Employee_Name	Department
101	Manish Gupta	Human Resource
102	Aman Khanna	Human Resource
103	Shruti Garg	Operations
Employee_ID	Employee_Name	Department
104	Ruchi Sharma	Operations
105	Deepti Kakkar	Operations

Fig. 7.16: Splitting Table Into Two Parts

Merging Tables

To merge the tables into a single table, you need to delete the space between the two tables. You can either press the **Delete** key or the **Backspace** key to delete space between the two tables. Let us see how to merge two tables:

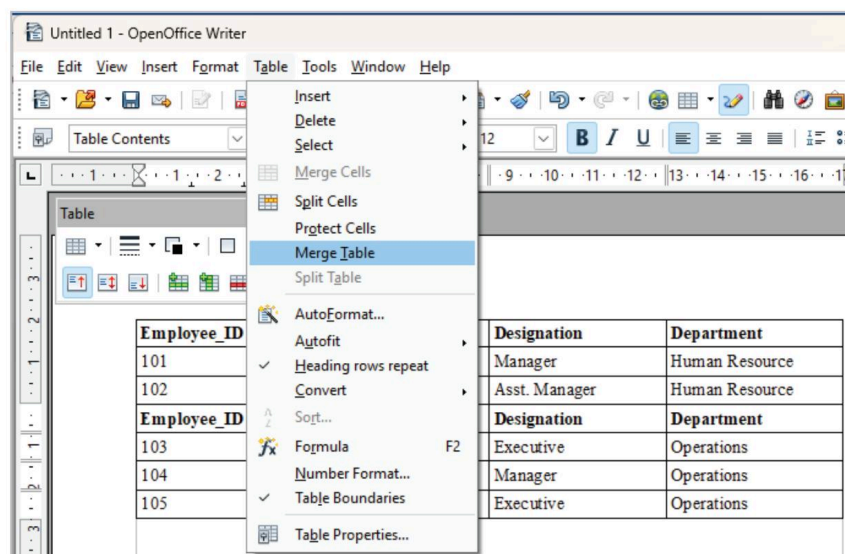

Fig. 7.17: Selecting Merge Table Option

1. Select a cell in the second table.

- From the menu bar, select **Table > Merge Table**.

OR

Right-click and select the **Merge Tables** option from the context menu.

- The two tables will be merged into one.

Deleting a Table

If you have a table in your document that you no longer need, you can easily delete it by following these steps:

- Click anywhere inside the table to select it.
- Click on the **Table** menu in the menu bar. Select **Delete > Table** from the extended menu.
- The table will be deleted from your document.

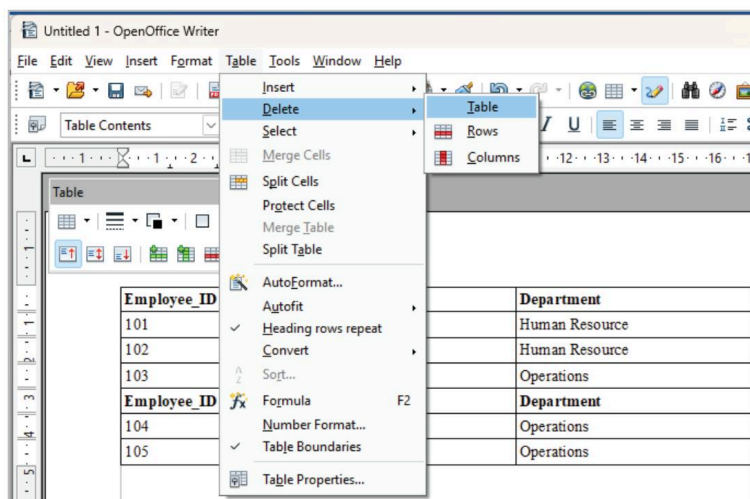

Fig. 7.18: Delete Table Option

Copying a Table

Copying a table means creating a duplicate copy of it and placing it at some other location in the same document or some other document. In Writer, copying a table is a quick and easy process.

Follow the given steps:

- First, select the table by clicking inside the first cell of the table and dragging the mouse through all the cells.

OR

Click the right diagonal corner of the table. The table will be selected.

- Now, Go to the **Edit** menu in the menu bar and then select the **Copy** option. The table will be copied to the clipboard.
- Click at some other location in the same or another document.

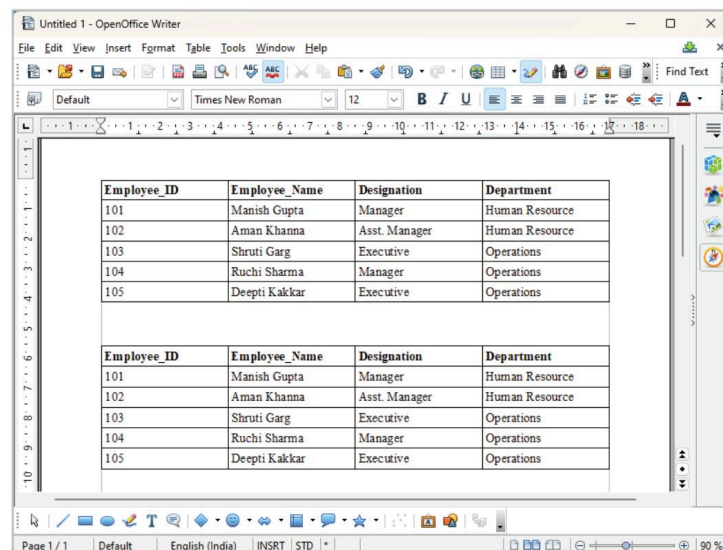

Fig. 7.19: Copying a Table

4. Go to the **Edit** menu and select the **Paste** option.
5. The table will be pasted at the new location.

Moving a Table

Moving a table means changing the location of the table within the same document or another document.

To move a table:

1. Select the table by clicking inside the first cell of the table and dragging the mouse through all the cells.
OR
Click the right diagonal corner of the table. The table will be selected.
2. Go to the **Edit** menu in the menu bar and select the **Cut** option. The table will be cut from its original location.
3. Click at some other location in the same or another document.
4. Go to the **Edit** menu and select the **Paste** option.
5. The table will appear at the new location.

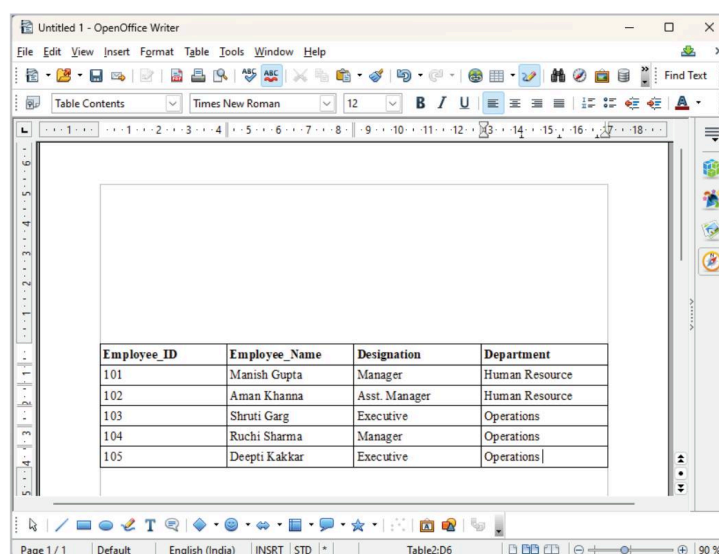

Fig. 7.20: Moving a Table

Activity Time

Activity 1: Recording Local Dishes

(Group Work)

Create a group of 4–5 students among yourselves and create a table to record the local dishes in your region's cuisine. Insert more rows and columns to record more data.

Activity 2: Green Diwali

(Individual Work)

Create a table with 6 rows and 4 columns. Collect data from your neighbourhood regarding their approach to 'Green Diwali'. such as house number, owner's name, purchase of crackers (Yes/No), use of eco-friendly diyas, and so on. Copy and paste the table in your report on 'Diwali Celebration'.

Activity 3: Half-Yearly Performance

(Individual Work)

Create a table to record your half-yearly performance. Create a column for each subject, and then record the marks for each subject in the rows.

Chapter Checkup

A Select the correct option.

- 1 How can you create a table in OpenOffice Writer using a shortcut key?
 - a Alt + T
 - b Ctrl + T
 - c Ctrl + F12
 - d Ctrl + M
- 2 What is the purpose of splitting a table in Writer?
 - a To create a copy of the table
 - b To divide a table into two parts
 - c To merge two tables together
 - d To delete the table
- 3 What is the intersection of a row and a column in a table called?
 - a Cell
 - b Grid
 - c Block
 - d Sector

B Fill in the blanks with the most suitable words.

- 1 To create a table using the Table icon, open a new or existing document in Writer and click the _____ arrow of the Table icon on the Standard toolbar.
- 2 To move to the next cell in a row, you can use the _____ key.
- 3 To insert rows in a table, place the cursor in the row where you want to insert a new one, select the Table menu, then select the _____ option.
- 4 To merge two tables, select a cell in the second table and choose the _____ option from the menu bar.

C State whether the following is *True* or *False*. Correct the statements that are false.

- 1 You can create a table in Writer using the Alt + T shortcut key.
- 2 You cannot change the location of a table within the same document or another document.
- 3 Merging a table means combining two tables into one.
- 4 You can delete a table in Writer by selecting the table and selecting **Table > Delete > Table**.

D Answer the following questions. (Solved)

Q1. How can you insert additional rows or columns into an existing table in OpenOffice Writer?

A1. To insert additional rows or columns, select the row or column where you want to insert new ones, and use the Table menu to choose the Insert > Rows or Columns option. Specify the number of rows or columns and their position (before or after) to insert them.

Q2. Explain the steps for copying a table in Writer and placing it in a different location. What is the purpose of copying a table, and how is it achieved?

A2. To copy a table in Writer and place it in a different location:

- Select the table by clicking inside the first cell or by clicking on the right diagonal corner of the table.
- Go to the Edit menu and choose the Copy option to copy the table to the clipboard.
- Click the new location in the same or another document.
- Again, go to the Edit menu and select the Paste option to paste the table at the new location.

The purpose of copying a table is to create a duplicate copy of it and place it in a different location within the same document or another document. This is helpful when you want to reuse a table without recreating it from scratch.

Q3. Imagine you are working on a document that requires a table, and you need to insert additional rows to accommodate more data. Explain the steps you would take to insert rows in the table.

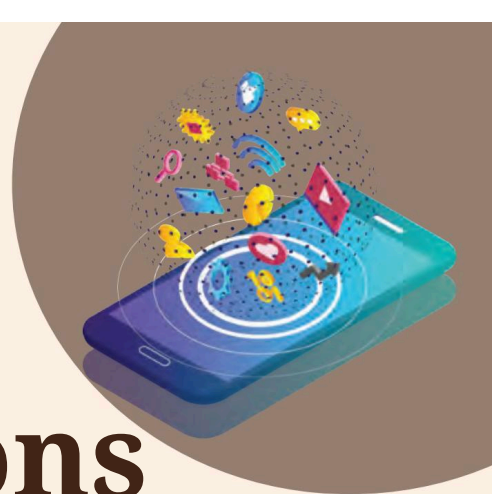

A3. To insert rows in a table:

- Place the cursor in the row where you want to insert a new one.
- Select the **Table** menu from the menu bar.
- Choose the **Insert** option.
- From the extended menu, select the **Rows** option.
- In the **Insert Rows** dialog box, type the number of rows you want to insert.
- Select the Position radio button for either 'Before' or 'After' based on where you want the new rows.
- Finally, click **OK**, and the entered number of rows will be added to the table to accommodate more data.

Answer Key

- A** 1. c 2. b 3. a
- B** 1. Drop-down 2. Tab 3. Insert > Rows 4. Table > Merge Table
- C** 1. False. Correct Statement: You can create a table using the Ctrl + F12 shortcut key.
2. False. Correct Statement: You can move a table within the same document or another document.
3. True.
4. True.

8

Using Print Options

Printing means producing a copy of a document on paper. As it is a copy which can be touched, it is also known as hard copy. Printed documents are cost effective, as no special device is required to read them. Also, they are portable and easy to use.

Print Preview

In word processors, the Print Preview feature offers a way to visualise how your document will look after getting printed. Before printing, double-checking the document's content, layout, and formatting guarantees a successful result.

You can check the print preview by clicking on the **Page Preview** option from the **File** menu.

Printing Options in Writer

Like other word processing software, the Writer also provides various options for printing.

Steps to print a document in word processor:

1. Open the document you want to print.
2. Type some text into the document.
3. Select the **Print** option from the **File** menu. The **Print** dialog box appears.
4. Printing allows for choosing several options for printing. These options will be discussed further.
5. Click on the **Print** button. With this, you can effortlessly print your document.

Now, let us discuss the various printing options that can be selected from the **Print** dialog box to print a document:

1. **Printer:** Select the name of the printer to print page(s) of your document.

Did You Know?

In 1993, the world's first digital colour printing press, Indigo, was launched.

Did You Know?

WYSIWYG, an acronym for What You See Is What You Get, allows user to view something very similar to the result. Print Preview is WYSIWYG only.

Did You Know?

The introduction of print preview was accomplished by John Day, a printer from England in the 16th century.

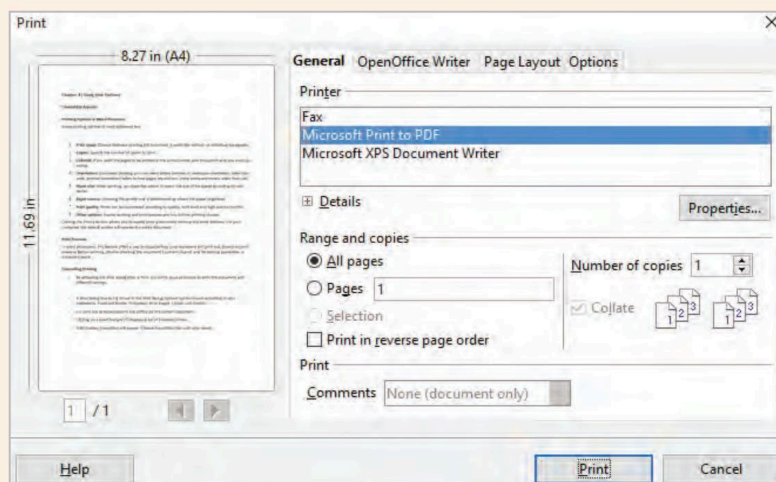

Fig. 8.1: Print Dialog Box

2. **Range and copies:** You can select any of the following options in this section:

- **All pages:** This option allows you to print the complete document
- **Pages:** This option allows you to print a specific page or a range of pages. You need to enter page numbers, separated by comma or a series of consecutive pages. For example, if you want to print pages 3 to 8, then you can specify the range 3–8.
- **Selection:** This option allows you to print the selected text.

It allows you to print a complete document, a particular page or range of pages, or just the selected text.

3. **Number of copies:** It allows you to specify the number of copies to print.

4. **Collate:** It allows you to print in a specific order when printing multiple copies of a document.

When you click on the **Properties** button, you will find the following options under the two tabs—**Layout** and **Paper/Quality**.

5. **Orientation:** Page orientation is used to set the printing direction of the text on a paper. There are two types of page orientation—**Landscape** and **Portrait**. Taller than wide, portrait orientation refers to how pages are laid out, while landscape means wider than tall. Portrait is the default orientation.
6. **Paper Source:** It allows you to set the location where printer tray is determined from where the paper originates. **Automatically Select** and **Main Tray** are the two options available for paper source.
7. **Quality Settings:** It allows you to specify the quality of printing. You can choose any of the quality options—**Best**, **Better**, or **Draft**.
8. **Color:** You can choose for coloured print or black and white print as per your requirement.
When you click on the **Advanced** button, you can select the given option.
9. **Paper Size:** It allows you to choose the size of the paper on which you want to print. Some examples are Letter, A4, A5, A6, etc.

Click on the **OK** button to save your printer settings.

Clicking the **Print** button from the standard toolbar allows you to rapidly print a document. You can also use the shortcut key **Ctrl + P** to print your document. Also, the default printer installed on your computer receives the document that you wish to print.

Activity Time

Activity 1: Print Your Poem or Story

(Individual Activity)

Write a poem or a story in a document and print all even pages of the story.

Activity 2: Preview and Print Your Motivational Story

(Individual Activity)

Write a motivational story and print it with various options. Check the preview of pages before printing.

Activity 3: Explore Printing Options

(Individual Activity)

Write any five ways in which you can save water. Apply landscape orientation, set paper size to A4, print quality to draft, and take print of coloured and black and white.

Chapter Checkup

A Select the correct option.

- Which of the following is not a printing option in Writer?
a Pages **b** Number of copies **c** Orientation **d** Font size
- Print option is available under which of the following menus?
a File **b** Edit **c** View **d** Insert
- Which option allows you to preview your document before printing?
a Page Preview **b** Print range **c** Copies **d** Paper size

B Fill in the blanks with the most suitable words.

- In the Print dialog box, select the _____ option to print out all the pages of your document.
- To print only a selected page range, _____ option must be selected and the page numbers must be entered in the given text box.
- To print the selected text, _____ option must be selected.
- In _____ orientation the page is wider than it is tall.

C State whether the following is *True* or *False*. Correct the statements that are false.

- You can use the shortcut key Ctrl + P to print a document.
- Writer offers a feature to preview your document before getting it printed.
- To print a document in a specific size, select the desired paper size in the Print dialog box's Paper Size option.
- We cannot customise the quality of prints.

D Answer the following questions. (Solved)

Q1. What do you mean by printing?

A1. Printing means producing a copy of a document on paper.

Q2. What do you mean by orientation? What are the two types of orientation?

A2. Page orientation is used to set the direction of the text on a paper. There are two types of page orientation—Landscape and Portrait.

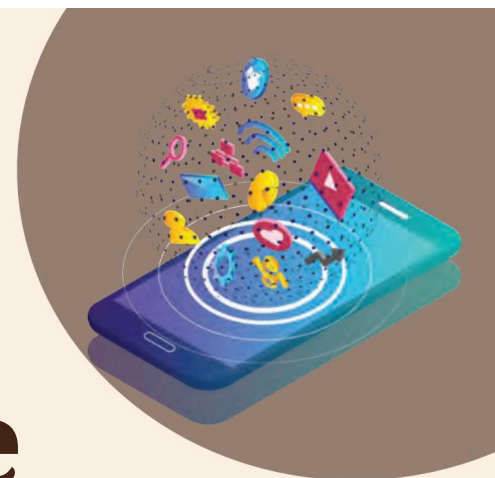

Q3. Chirag wants to print a document. What options can he choose from depending on the number of pages or text he wants to print?

A3. The Print range option allows him to specify the number of pages for printing. It provides following three options:

- **All Pages:** It enables you to print all the pages in the document.
- **Pages:** It enables you to print the specified pages. You need to enter page numbers, separated by comma or a series of consecutive pages. For example, if you want to print pages 3 to 8, then you can specify the range 3–8.
- **Selection:** It enables you to print only the selected text.

Answer Key

- A** 1. d 2. a 3. a
- B** 1. All pages 2. Pages 3. Selection 4. Landscape
- C** 1. True.
2. True.
3. True.
4. False. You can choose any of the quality options—**Best**, **Better**, or **Draft**.

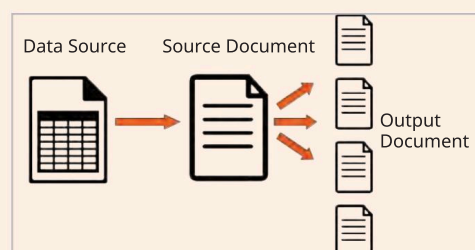

9

Using Mail Merge

Mail Merge is a feature commonly used in word processing software like OpenOffice Writer, to streamline the process of creating personalised documents, such as emails, letters, labels, and envelopes, for many recipients.

For example, Divya is a manager in a company. She wants to send a notice to 1,000 employees of her company. The main matter of the notice will remain the same for all; only the names and addresses of employees will be changed. It is difficult for her to create 1,000 documents by manually changing the names and addresses. In such a situation, the Mail Merge feature of a word processor comes in handy.

Benefits of Mail Merge:

1. It saves time and effort.
2. It can help make changes in letters.
3. It can produce mass emails with complete labels or envelopes.

In Mail Merge, two documents need to be created:

1. **Main Document:** This document contains the basic text that will be the same in all the documents.
2. **Data Source:** It is the file that contains names, addresses, or any other information that varies with each document. For example, following is the sample of a data source:

Name	Address	City	Pin code	Contact no.
Shruti	Sector-134	Noida	201309	2345645244
Mohit	Lajpat Nagar	Delhi	110003	5634566540
Nandani	Kavi Nagar	Ghaziabad	110456	8675644678
Deepak	Sector-45	Greater Noida	203496	6756344090

← Field Name

← Field Values

Using Mail Merge in Writer

The Mail Merge feature combines the main document with the data source and creates a new document. For better understanding, we have divided the entire process of Mail Merge into the following steps:

1. Creating the main document

2. Creating a data source
3. Editing address block
4. Creating salutation
5. Editing the individual document
6. Printing and saving the merged letter

Creating the Main Document

To create a document that works as a base for Mail Merge:

1. Open Writer and type the text of the letter you want to send.

Hi

We hope that you are doing great! We would like to cordially invite you to celebrate the annual day of the company on Wednesday, 15 November 2023, at the Hotel Grand. The details of the programme are given below:

Snacks	:	8:00 PM
Dance	:	9:00 PM
Dinner	:	10:00 PM
Appreciation Ceremony	:	11:30 PM

Venue: Hotel Grand, Delhi

Thanks and Regards,

ABC Pvt. Ltd.

Fig. 9.1: Main Document for Mail Merge

2. On the menu bar, click the **Tools** menu.
3. Select the **Mail Merge Wizard** option.

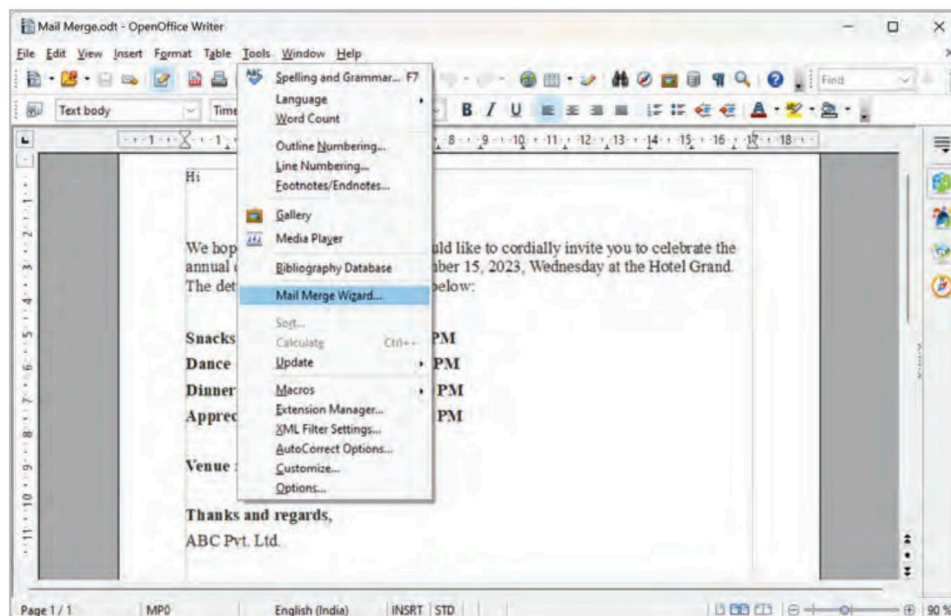

Fig. 9.2: Starting Mail Merge

The **Mail Merge Wizard** opens with the **Select starting document** step, as shown in Fig. 9.3.

4. Select the **Use the current document** radio button, as we are using the current document as the main document. You can also create the main document here by selecting the **Create a new document** radio button.
5. Click **Next**.

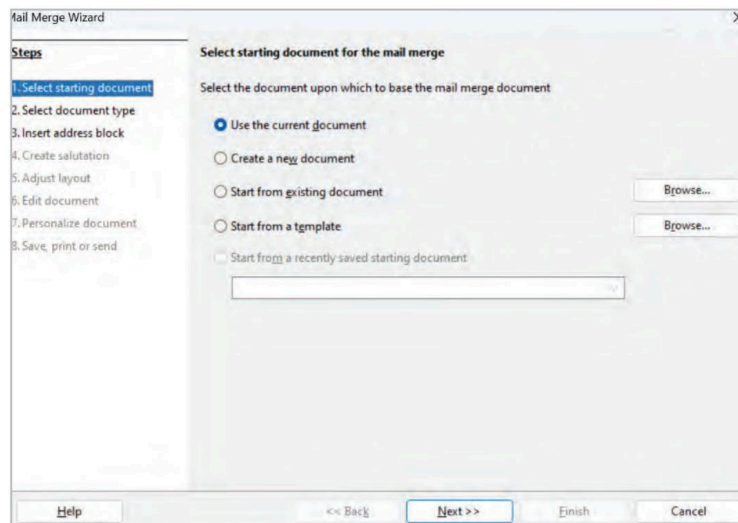

Fig. 9.3: Mail Merge Wizard with Step 1

6. The **Select document type** step of the **Mail Merge Wizard** opens. In this step, specify the document type you want to create, it can be a **Letter** or an **E-mail message**, as shown in Fig. 9.4.

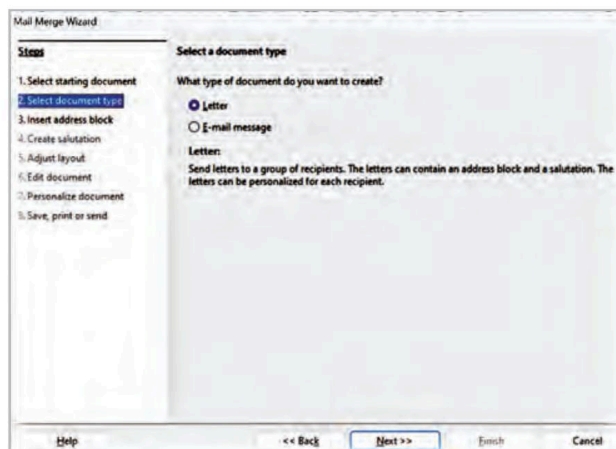

Fig. 9.4: Creating a Letter

7. Select the **Letter** radio button.
8. Click **Next**.

The **Insert address block** step of the **Mail Merge Wizard** opens. In this step, you can create the recipient list.

Creating the Data Source

Follow the steps given below to create a data source:

1. Click the **Select Address List** button. The **Select Address List** dialog box appears.

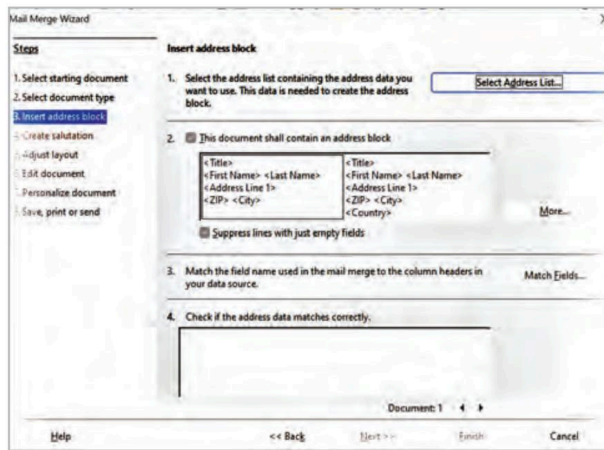

Fig. 9.5: To Insert an Address List

2. Click the **Create** button. A **New Address List** dialog box appears.

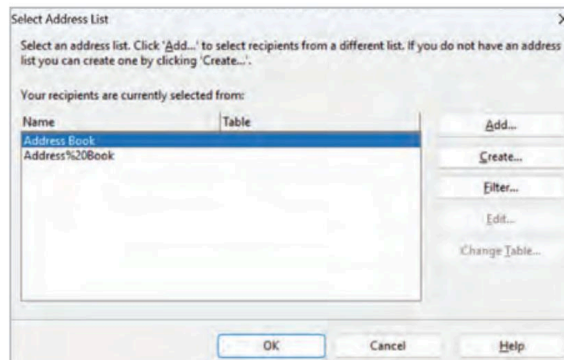

Fig. 9.6: To Select an Address List

3. Enter the details of the first employee. You can customise the fields by clicking the **Customize** button.
4. After entering the details, click the **New** button to enter the details of the next employee.
5. Press the **Tab** key to move between the fields while typing the information.
6. After entering the details of all employees, click the **OK** button.

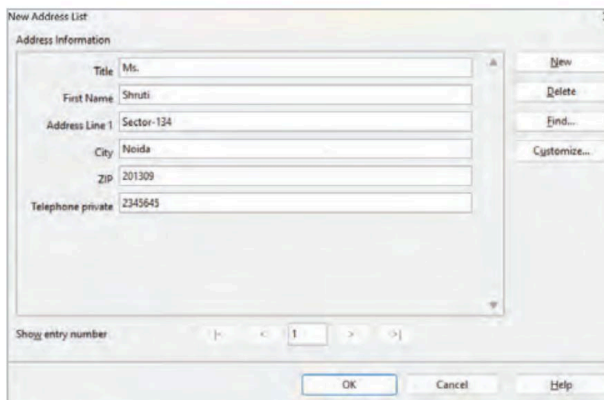

Fig. 9.7: New Address List Dialog Box

The **Save As** dialog box appears.

7. Type the data source file name in the **File name** box.
8. Click the **Save** button.

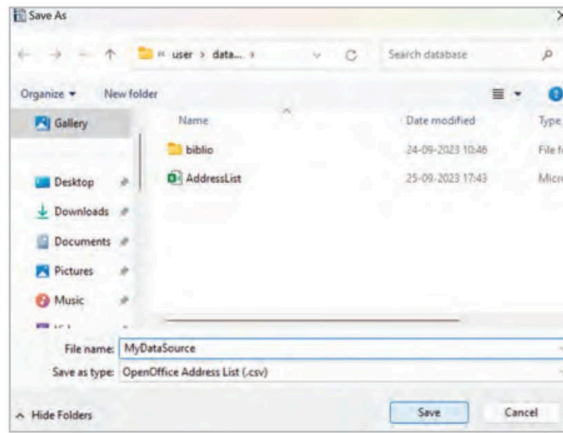

Fig. 9.8: Saving a Data Source

The **Select Address List** dialog box reappears with a newly created data source.

9. Click the data source.
10. Click **OK** button.

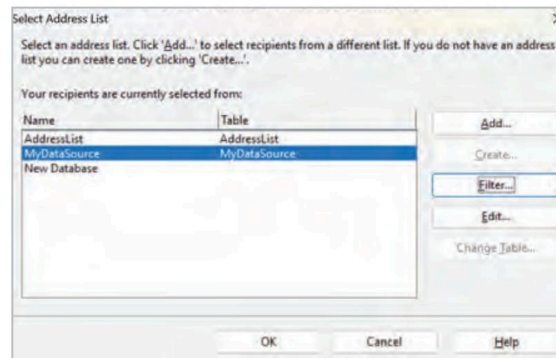

Fig. 9.9: Selecting a Data Source

The **Insert address block** step of the **Mail Merge Wizard** appears again. Here, click the **More** button to customise the address block, according to your data source.

Editing Address Block

1. Click the **More** button. The **Select Address Block** dialog box appears.

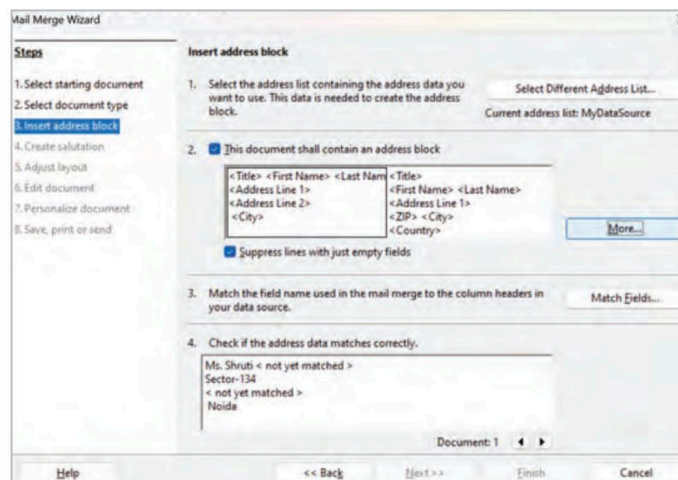

Fig. 9.10: To Customise the Address List

2. Click the **Edit** button.

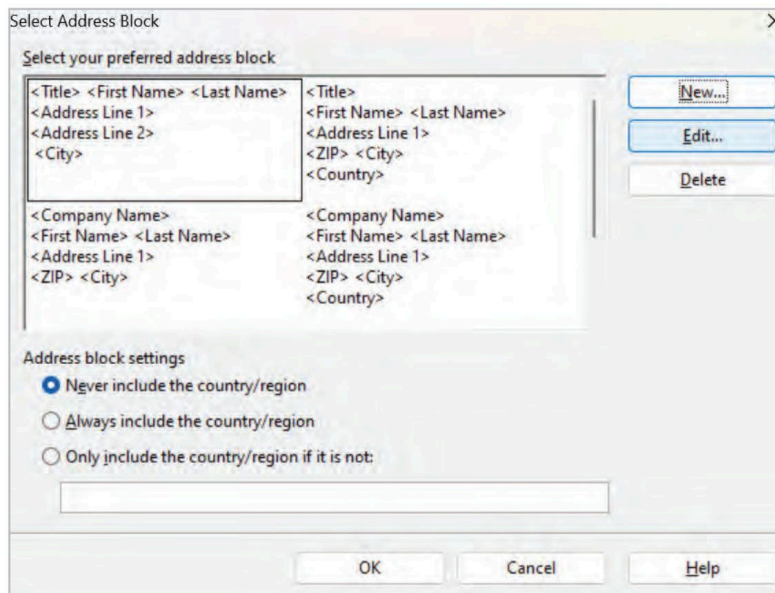

Fig. 9.11: Modifying Address Block

The **Edit Address Block** dialog box opens. Here, you can add, delete, or rename any field name, as shown in Fig. 9.12.

3. Click **OK**.
4. Click the **OK** button in the **Select Address Block** dialog box. The **Mail Merge Wizard** appears.
5. Click **Next**.

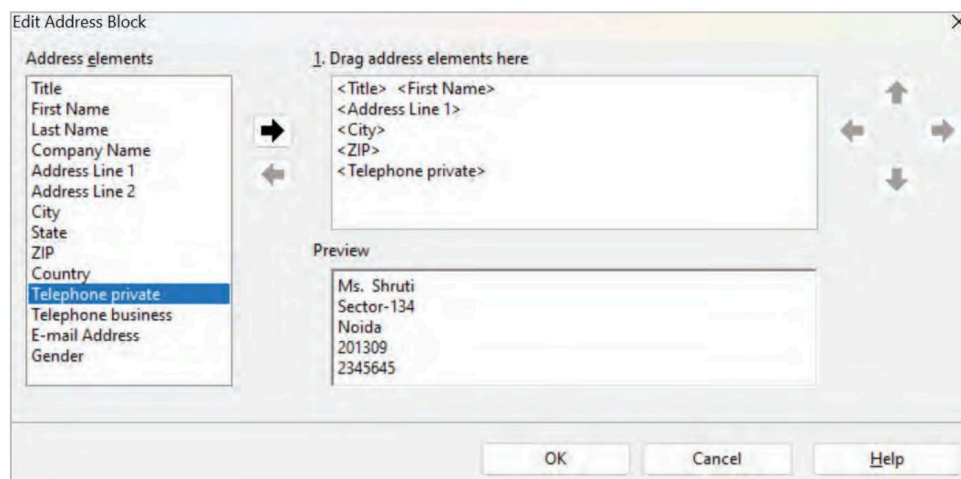

Fig. 9.12: Edit Address Block Dialog Box

The **Create a salutation** step of **Mail Merge Wizard** appears.

Creating Salutation

1. Change the salutation format of female and male employees by clicking the **New** button.
2. Click the **Match fields** button.

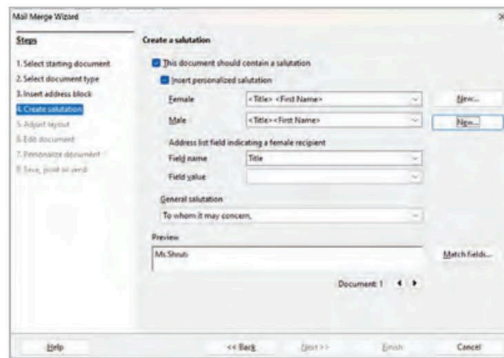

Fig. 9.13: Creating a Salutation

The **Match Fields** dialog box appears.

3. Match the fields with your data source fields.
4. Click **OK**.

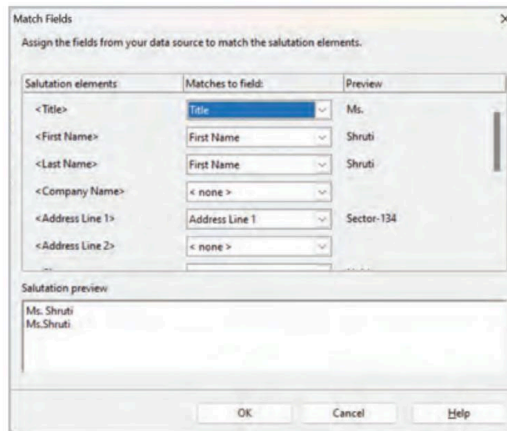

Fig. 9.14: Match Fields Dialog Box

5. Click the **Next** button in **Mail Merge Wizard**.

The **Adjust layout** step of the **Mail Merge Wizard** opens.

6. To set the layout of the recipient address and salutation on the page, you can set the top and left margins, as shown in Fig. 9.15.
7. Click **Next**.

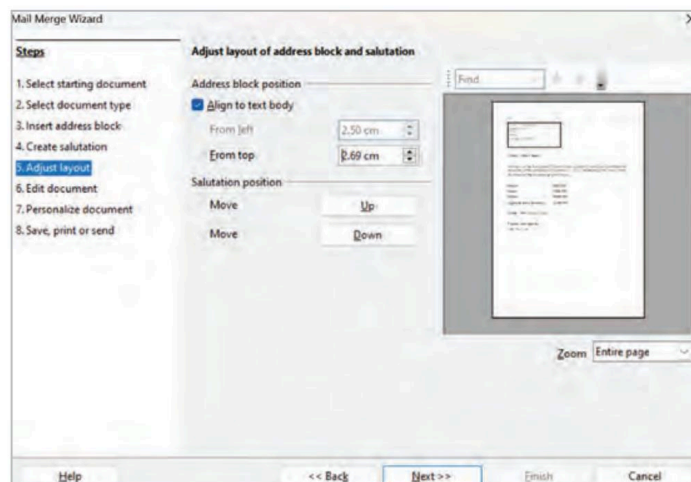

Fig. 9.15: To Adjust the Layout

The **Edit document** step of the **Mail Merge Wizard** opens.

8. Click the **Edit Document** button, if you want to make any change in the document before merging.
9. Click **Next**.

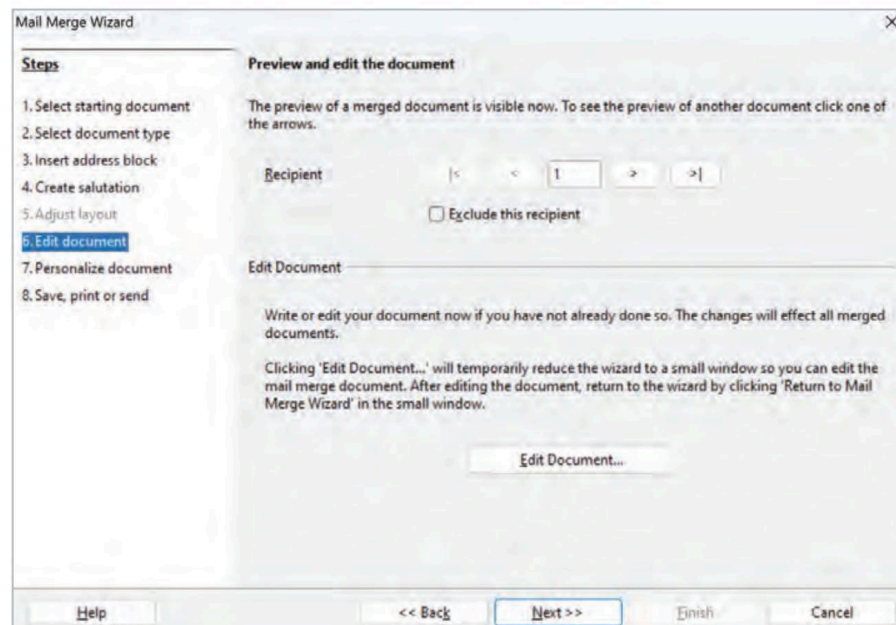

Fig. 9.16: Editing Document

The **Personalize document** step of the **Mail Merge Wizard** opens.

Editing an Individual Document

1. Click the **Edit individual document** button, to edit the individual document.

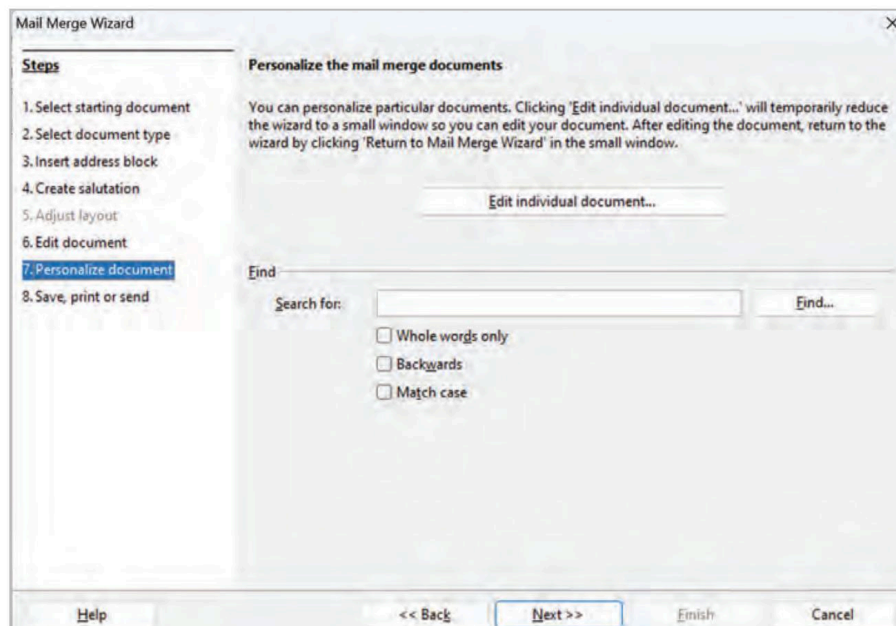

Fig. 9.17: Personalising the Document

The **Save, print or send** step of **Mail Merge Wizard** appears.

Printing and Saving the Merged Letter

1. To save the merged document, click the **Save merged document** option in the wizard, as shown in Fig. 9.18.
2. To print the merged document, click the **Print merged document** option.

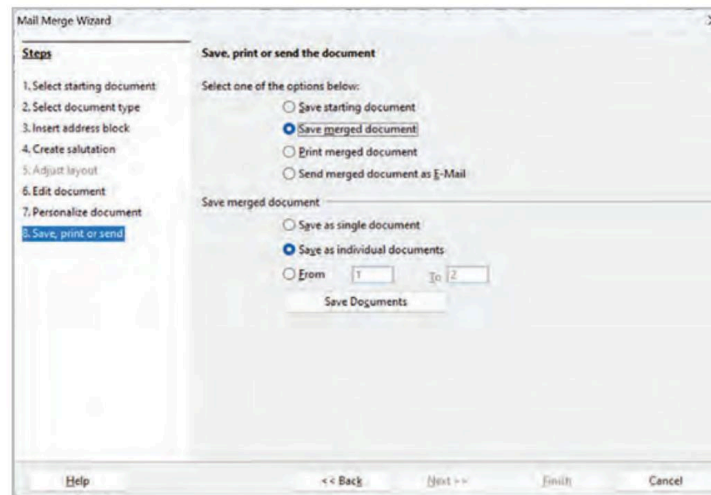

Fig. 9.18: To Save the Merged Document

3. Select the printer name from the **Printer** drop-down.
4. Click on the **Print all documents** radio button, if you want to print all documents.
5. Click the **Print Documents** button.
6. To send the letters by email, click the **Send merged document as E-mail** button, as shown in Fig. 9.19.
7. Click the **Finish** button in the wizard.

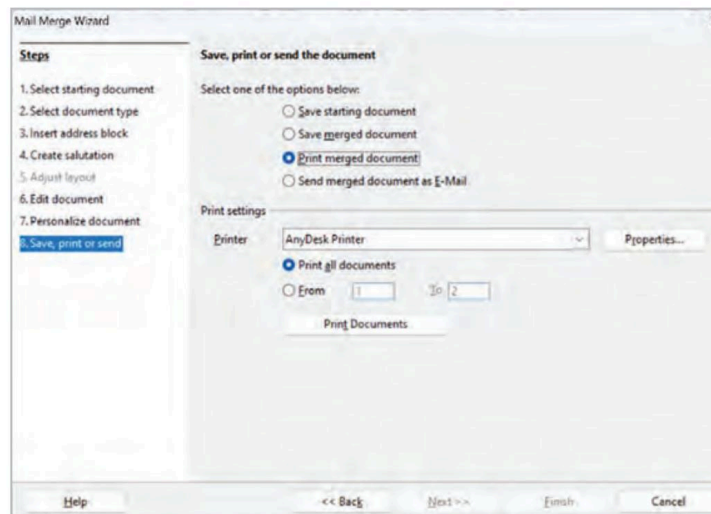

Fig. 9.19: To Print the Merged Document

A new document is created containing all the recipients' letters.

Error Alert!

Students often make several common mistakes while using the Mail Merge feature, i.e., incorrect Data Source, mismatching Field Names, not saving the Data Source, not saving the merged documents, etc.

Activity Time

Activity 1: Invite Your Friends

(Individual Activity)

Prepare a list (data source) of your friends. Using the Mail Merge feature, create an invitation letter and invite your friends to your sister's wedding.

Activity 2: Invitation for Inter-School Science Competition

(Individual Activity)

Your school is organising an inter-school Science competition. You are the coordinator of your school's Science Club. Your teacher has asked you to create an invitation letter to seek the participation of various schools in the contest. Use Mail Merge Wizard to create the letter and merge it with the recipients' list.

Activity 3: Invite for School's Annual Talent Show

(Individual Activity)

Imagine that you are a student preparing to send out invitations for your school's annual talent show to all the students in your grade. You have a list of all the students' names and their respective classes. Create a step-by-step plan using Mail Merge in Writer to generate personalised invitation letters for each student. Mention the key steps and settings you would use in Mail Merge to accomplish this task.

Chapter Checkup

A Select the correct option.

- 1 What is the purpose of Mail Merge?
 - a To play games
 - b To create personalised documents for multiple recipients
 - c To edit images
 - d To browse the internet
- 2 What is the main document in a Mail Merge process?
 - a The document containing data from the data source
 - b The final merged document
 - c The spreadsheet used for data input
 - d The document containing the common information for all letters
- 3 Which step is essential in the Mail Merge process?
 - a Adding Clip Art to the document
 - b Inserting a table in the document
 - c Selecting the data source
 - d Changing the font style

B Fill in the blanks with the most suitable words.

- 1 The _____ is the letter that you wish to send to multiple recipients.
- 2 A merged document is created by merging the main document with the _____.
- 3 You can use the Mail Merge feature of the Writer by clicking on the _____ menu.
- 4 We can send the letters via e-mail by clicking the _____ button in Mail Merge Wizard.

C State whether the following is *True* or *False*. Correct the statements that are false.

- 1 The Mail Merge Wizard involves two steps to carry out the mail merge process.
- 2 The Mail Merge feature saves time and effort.
- 3 You can find the Mail Merge Wizard option in the Insert menu.
- 4 The document containing a list of recipients is called the data source.

D Answer the following questions. (Solved)

Q1. What are the benefits of Mail Merge?

A1. Benefits of Mail Merge are as follows:

- It saves time and effort.
- It simplifies making changes in letters.
- It can produce mass emails with complete labels or envelopes.

Q2. How is Mail Merge helpful in everyday life?

A2. Mail Merge is a feature commonly used in word processing software like OpenOffice Writer, to streamline the process of creating personalised documents, such as emails, letters, labels, and envelopes, for many recipients.

Q3. Hiral has a list of teachers with their address. She wants to send an invitation letter to all teachers. For this purpose, where can she store the details of the teachers and what is it called?

A3. She can store the details of the teachers in a data source.

Answer Key

A 1. b 2. d 3. c

B 1. Main document 2. Data Source 3. Tools 4. Send merged document as E-mail

C 1. False. The Mail Merge Wizard involves eight steps to carry out the mail merge process.
2. True.
3. False. You can find the Mail Merge Wizard option in the Tools menu.
4. True.

Unit Reflection

Key Terms

Document: It is a piece of information that has been written, printed, or digitally developed.

Word Processor: It is a computer software application designed with the single goal of allowing users to write, edit, format, and print documents.

Template: It is a predesigned layout that enables users to create various documents, such as reports, resumes, or invitations, in an easy way.

Cursor: It is a vertical blinking line in a document window.

Mouse Pointer: It is an indicator of the position of a mouse through a little arrow on a computer screen.

Text Editing: It is the process of making changes to written text in order to improve its quality, correctness, and consistency.

Thesaurus: It serves as an integrated dictionary that allows you to search for equivalents, opposites, word replacements, and various phrasings.

Superscript: It means to place the text slightly above the baseline of the text.

Subscript: It means to place the text slightly lower than the baseline of the text.

Indentation: It refers to the distance between the margin of the page and the text of the paragraph.

Page Formatting: It refers to the changes made in the default settings of a page in a document.

Table: It is a combination of a row and a column.

Cell: It is an intersection of a row and a column.

Printing: It means producing a copy of a document on paper.

Mail Merge: It is a feature commonly used to streamline the process of creating personalised documents, such as emails, letters, labels, and envelopes, for many recipients.

Things to Remember

- Documentation is the process of making documents.
- Basic word processors such as Notepad and WordPad are also referred to as text editors.
- Templates save time and effort by eliminating the need to start from scratch and ensuring consistency in document formatting.
- The Navigator tool makes locating and navigating between the objects easier.
- The Undo command allows you to reverse your latest actions performed in a document.
- The Redo command allows you to reverse your actions performed in a document through the Undo command.

- To perform any action on a text, sentence, or paragraph, you need to select the desired block of text.
- A basic computer function called copying and pasting enables you to duplicate text, photos, files, or data.
- Moving the text feature enables you to move the position of your text from one place to another.
- The Find and Replace feature enables you to search for a particular word and replace it with some other word.
- Non-printing characters, also called formatting marks, are characters that don't appear in printed documents.
- The Spelling and Grammar feature of Writer checks spelling and grammatical mistakes in a document.
- The AutoCorrect function lets you automatically correct common misspelt words or typing errors as you type.
- Formatting a document is an essential part of creating professional-looking content.
- The **Page Style** dialogue box in OpenOffice Writer helps manage the page layout and formatting.
- The Formatting toolbar provides quick access to common formatting options, such as font type, font size, bold, italics, and underline.
- To remove formatting in OpenOffice, you can use the **Default Formatting** option in the **Format** menu.
- To enhance the appearance of a paragraph, you can adjust its right, left, top, and bottom margins, add borders to it, and specify the spacing between its lines of text.
- By using indentation, you can move a complete paragraph or its first line to a specific number of places with respect to the left or right margin.
- You can change the font colour from the **Properties** pane by clicking the **Font color** icon under the **Text** section and selecting the desired colour from the **Font color** dialogue box.
- Bullets and numbering in OpenOffice Writer are used to organise information in the form of lists.
- A nested bulleted list is a list within a list where you have a main or parent list with one or more subordinate or child lists.
- Paragraph styles in OpenOffice are the predefined formatting options that can be applied to paragraphs.
- You can apply various formatting features to a page, such as changing the page layout, paper size, orientation, and margins.
- A page break is useful to start content on a new page.
- The header and the footer are the areas at the top and bottom of a page, respectively, where you can show the information that appears on every page of your document.
- In OpenOffice, you can easily define borders and backgrounds to add visual effects and clarity to your text in the document.
- To divide a page into columns, select the **Format** menu and then select the **Columns** option.
- Tables can be used for various purposes, such as creating schedules and organising information in a clear and easy-to-read manner.
- There are many methods in Writer to create a table:
 - Using the **Table** icon from the **Standard** toolbar
 - Using the **Table** menu from the menu bar
 - Using the **Insert** menu from the menu bar
 - Using the **Ctrl+F12** shortcut key
- To enter data in a table, click inside a cell in the table and start typing.

- To insert rows or columns in a table, place the cursor in the required cell and then select **Table > Insert > Rows** or **Columns**.
- To delete rows or columns from a table, select the row or column and then select **Table > Delete > Rows** or **Columns**.
- Copying a table means creating a duplicate copy of it and placing it at some other location in the same document or some other document.
- Moving a table means changing the location of the table within the same document or another document.
- Printed documents are also known as hard copies.
- You can check the print preview by clicking the Print Preview option from the File menu or by pressing Ctrl + Shift + O.
- The main document contains the basic text that will be the same in all the documents.
- The data source is the file that contains names, addresses, or any other information that varies with each document.
- The Mail Merge feature combines the main document with the data source and creates a new document.
