

15

Features of an Effective Presentation

Presentation is defined as “the way in which something is shown, explained, and offered to people.” Earlier, we used overhead projectors and transparent slides to present something to the audience. On those slides, information was printed or written. These slides, known as transparencies, were made of plastic.

Fig. 15.1: Overhead Projector

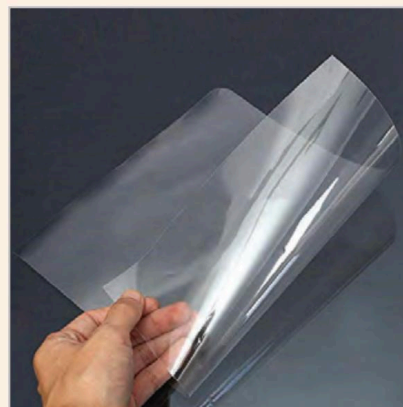

Fig. 15.2: Transparency

This method of presentation was very time-consuming and expensive. To overcome this problem, digital presentation comes into play.

Concept of Digital Presentation

A digital presentation is a method by which you can present your work to the audience without using paper or a pen. It refers to the use of digital tools and technologies to create, organise, and deliver visual content. A digital presentation contains slides in digital form, which are also known as electronic pages. When multiple slides are presented in a sequential manner, it is known as a slide show. For example, you can use text, images, diagrams, and videos to express information or ideas to an audience. It replaces physical presentations with dynamic and engaging multimedia contents. In almost every field, including entertainment, education, business, etc., there is a requirement for presentation experts.

Fig. 15.3: Digital Presentation

Digital Presentation Software

There are various digital presentation software available that can help you create and deliver attractive presentations. Some of these are as follows:

1. Microsoft PowerPoint
2. LibreOffice Impress
3. OpenOffice Impress
4. Adobe Connect
5. Google Slides

Did You Know?

VCN ExecuVision was the first digital presentation software developed in 1982.

Key Elements of a Digital Presentation

A presentation may include one or more of the following elements:

1. Regular text
2. List items
3. Background
4. Table
5. Graphics elements like diagrams, shapes, 3D objects, etc.
6. Audio and video
7. Animation
8. Header and footer
9. Slide number
10. Date and time

Applications of a Digital Presentation

There are various places where digital presentations can be used:

1. Business organisation
2. Teaching and learning
3. Training
4. To show the operations of a machine digitally

Characteristics of a Good Presentation

A presentation is considered good if it effectively conveys its message to the audience, engages them, and leaves a positive and lasting impression. A good presentation should also include:

Clear Objective

1. The presentation should have a clear and well-defined objective.
2. The presentation should be able to deliver its main message to the audience.

Audience-Centred

1. The presentation should be created by considering the needs and interests of the audience.
2. The content used in the presentation should be according to the understanding level of the audience.

Text

1. Try to reduce the text and make the points shorter. Each slide should have five text lines, with no more than five words per line.
2. Try to pick a classic font so that the audience can read the contents easily. For example, Verdana, Calibri, and Helvetica, etc.

3. While selecting the text for the presentation, take care of the room size and the distance between the screen and the audience.

Design

1. Always use dark text on a light background and light text on a dark background.
2. It is important to make the tables as simple as possible.
3. Delete unnecessary outlines, colours, and borders.

Visual Aids

1. Create visually attractive slides with consistent design elements.
2. Select good-quality and high-resolution images that support your message.

Animation and Videos

1. Use animations and transitions carefully.
2. You should try to include one video or animation in a slide because including more than one video will overlap the sound.

Correct Use of Grammar and Language

1. The grammar should be correct in your presentation content.
2. You must do a spell check on each slide of your presentation.
3. Highlight the most important points and modulate your tone.

Use of Quotations

1. You should be very cautious when using quotations.
2. Avoid long and many quotations.
3. When the quotations are used, they should be correct and complete.

Rely on the Presenter View

1. Presenter View can help you greatly when delivering your presentation to viewers.
2. With this feature, you do not have to memorise everything.

Follow-Up

1. Provide a way for the audience to follow up with questions.
2. Request additional information if needed.

Remember

Too much text on a slide distracts the audience, so use less text and more graphics.

Did You Know?

Every single second, more than 350 digital presentations are launched around the world.

Activity Time

Activity 1: Storyboarding

(Individual Activity)

Prepare the storyboard for the presentation that you wish to create.

Activity 2: Creating a List of Multimedia Content

(Individual Activity)

List the possible multimedia content that is included while making an attractive presentation.

Chapter Checkup

A Select the correct option.

- 1 Which types of content can be included in a digital presentation?
 - a Text, images, diagrams, and videos
 - b Only text and images
 - c Only audio and video
 - d Only text and diagrams
- 2 What are slides in a digital presentation also known as?
 - a Transparencies
 - b Electronic pages
 - c Paper handouts
 - d Flipcharts
- 3 Which of the following is not a presentation software?
 - a Google Slides
 - b Microsoft PowerPoint
 - c LibreOffice Impress
 - d OpenOffice Calc

B Fill in the blanks with the most suitable words.

- 1 _____ in a digital presentation are known as electronic pages.
- 2 Earlier, slides were used for presentation which were also known as _____.
- 3 _____ view can help you greatly when delivering your presentation to viewers.
- 4 The presentation should be created by considering the needs and interests of the _____.

C State whether the following is *True* or *False*. Correct the statements that are false.

- 1 Header and footer can be inserted into the presentation.
- 2 A good presentation is one which has 4–5 lines on one slide.
- 3 We cannot insert audio/video in a presentation.
- 4 Font size used in presentation does not depend on the distance between the audience and the screen.

D Answer the following questions. (Solved)

Q1. Define digital presentation.

A1. A digital presentation is a method using which you can present your work to the audience without using paper or pen.

Q2. What are the key elements of digital presentation?

A2. A presentation may include one or more of the following elements:

- Regular text
- List items
- Background
- Table
- Graphics elements like diagrams, shapes, 3D objects, etc.
- Audio and video

- Animation
- Header and footer
- Slide number
- Date and time

Q3. Aman wants to create a presentation. He does not know the applications of the presentations. Tell him about any three applications of the presentations.

A3. The three applications of the presentation are:

- Business organisation
- Teaching and learning
- Training

Answer Key

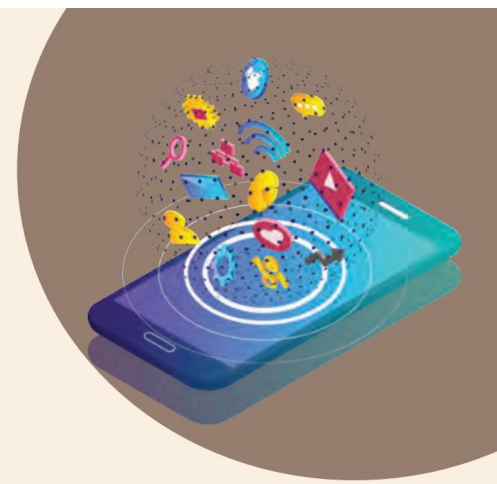

A 1. a 2. b 3. d

B 1. Slides 2. Transparencies 3. Presenter 4. Audience

C 1. True.
 2. True.
 3. False. We can insert audio/video in a presentation.
 4. False. While selecting the font for the presentation, you need to take care of the room size, distance between the screen and the audience.

16

Creating a Presentation

OpenOffice Impress is free and open-source presentation software. The main function of the Impress software is to simplify the creation and modification of presentations. It helps people create slideshows and design presentation slides, as well as add text, images, charts, and multimedia material.

Getting Started with OpenOffice Impress

There are several ways to start OpenOffice Impress on your computer.

1. Double-click on the OpenOffice Impress shortcut icon on the desktop if it is available.

OR

Click on the **Start** button or press the **Win** key. Click the **All Apps** button. A list of installed applications will open. Scroll down to the letter 'O'. Select OpenOffice, and then click on OpenOffice Impress.

OR

Type the word "Impress" in the search bar and click on the application name.

2. When you start OpenOffice Impress, you will find a window called Presentation Wizard, which is shown in Fig. 16.1.

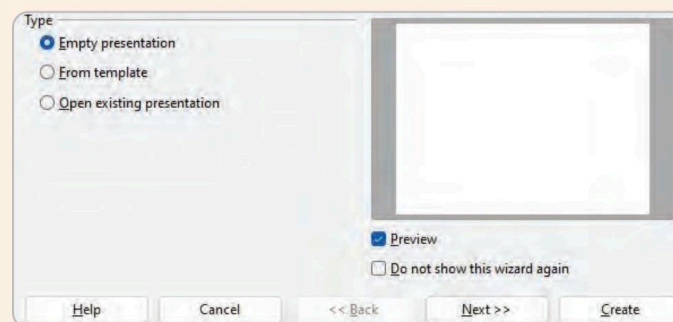

Fig. 16.1: Presentation Wizard

3. The Presentation Wizard provides three ways to create a presentation, which are as follows:
 - **Empty Presentation:** It is used to create a new or blank presentation.

- **From Template:** It shows a list of templates. You can choose as per your choice.
 - **Open Existing Presentation:** It is used to open an existing presentation.
4. Select the desired option and click on the **Create** button. A blank presentation named **Untitled 1** appears.

Components of OpenOffice Impress Window

The components of the Impress main window are shown in Fig. 16.2.

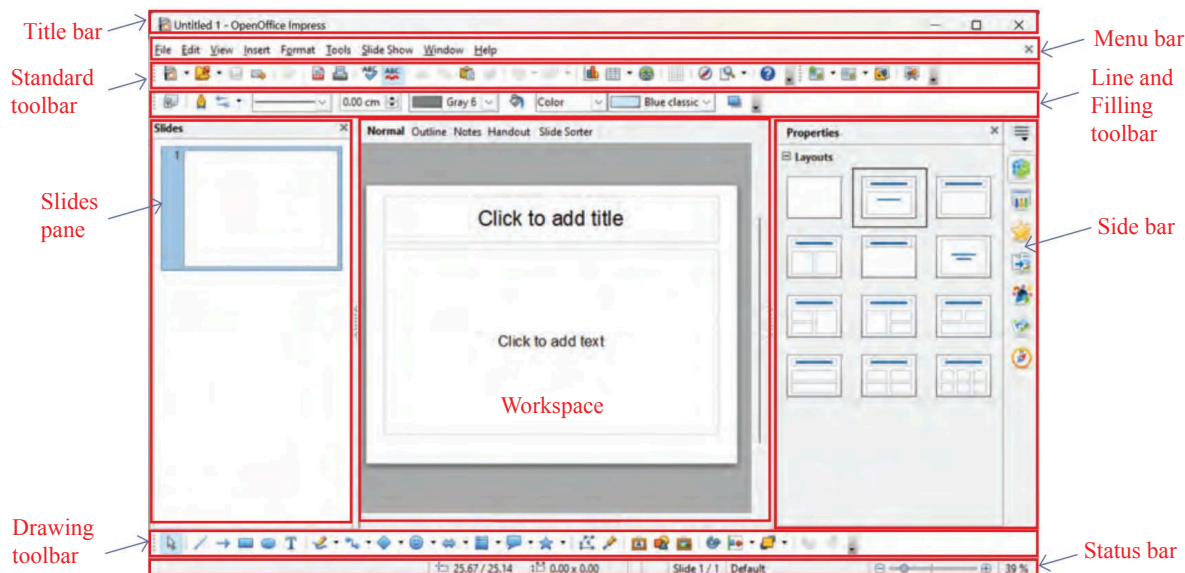

Fig. 16.2: Components of Impress Window

Title Bar: It consists of the presentation file name and the program used to present the application (OpenOffice Impress). It is at the top of the OpenOffice Impress window. Minimise, Maximise, and Close buttons are found in the top right-hand corner of this bar. These are known as window manipulation buttons.

Menu Bar: It contains different menus required to create the presentation, like File, Edit, View, Insert, Format, Tools, Slide Show, Window, and Help. Each menu further contains several options.

Standard Toolbar: It is placed just below the menu bar. It contains shortcut icons for easy operations, like:

1. **New:** It allows you to create a new presentation.
2. **Open:** It is used to open an existing presentation.
3. **Save:** It is used to save the current presentation.
4. **Save As:** It is used to save the current presentation to a different location.
5. **Export Directly as a PDF:** You can save files in PDF format.
6. **Print:** It is used to print the current presentation.
7. **Cut, Copy, and Paste:** These are standard editing tools for manipulating content within your presentation.
8. **Chart:** This allows you to insert charts into your slides.
9. **Table:** This allows you to insert a table on your slide.

Line and Filling Toolbar/Text Formatting Toolbar: By default, the Line and Filling toolbar is visible. The Line and Filling toolbar shows options, like Line Style, Line Width, Arrow Style, Line Colour, Fill, Shadow, etc., to apply styles to different objects like lines and shapes.

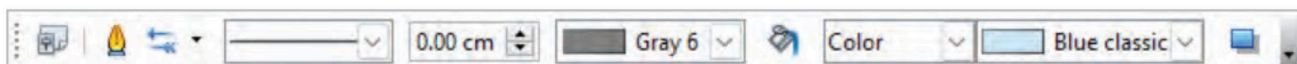

Fig. 16.3: Line and Filling Toolbar

When you click on the slide, the **Text Formatting Toolbar** appears. The Text Formatting toolbar is used to change the font style, size, and other formatting options for text. It is also used for aligning and positioning objects on your slides.

Fig. 16.4: Text and Formatting Toolbar

Slides Pane: It consists of thumbnail images of the presentation's slides arranged in the order they will be displayed. When you click on a particular slide, it will be shown in the workspace.

Workspace: Workspace is the middle part of the window where the slides are created. Normal, Outline, Notes, Handout, and Slide Sorter are its five tabs. These tabs are known as the **View** buttons. Workspace contains placeholders on a slide. A placeholder is an area in the slide that contains different types of content, including text and images.

Side Bar: It is located on the right side of the OpenOffice Impress window. It can be customised according to your needs. It contains seven buttons: Properties, Master Pages, Custom Animation, Slide Transition, Styles and Formatting, Gallery, and Navigator.

Drawing Toolbar: The **Drawing Toolbar** contains many tools that are used to draw and colour shapes, create text boxes, add graphics, etc. Some of the tools are as follows:

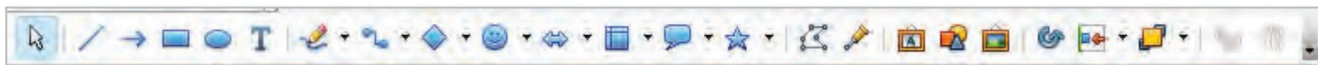

Fig. 16.5: Drawing Toolbar

1. **Text:** It allows you to place a text box on the slide where you can enter and format text.
2. **Basic Shapes:** It allows you to insert some basic shapes like rectangles, ellipses, curves, circles, etc.
3. **Curve:** It allows you to add curved lines to your slides.
4. **Connectors:** It allows you to add connectors to your slides.
5. **Symbol Shapes:** It allows you to add various symbols, like a moon, a smiley face, brackets, etc.
6. **Gallery:** It allows you to add built-in images of OpenOffice Impress to your slides.
7. **From File:** It allows you to add images from your computer.
8. **Fontwork Gallery:** It provides various stylish text fonts to write text in different styles.
9. **Flowcharts:** It allows you to draw the flowcharts into your presentation.
10. **Callouts:** It allows you to draw different types of callouts in your presentation.
11. **Stars:** It allows you to draw different types of stars and banner shapes in your presentation.

Status Bar: It is located at the bottom of the Impress window. It displays details about the zoom slider, the active presentation, and the cursor's current location. A zoom slider is used to zoom in or zoom out of the slide.

Closing OpenOffice Impress

We can close OpenOffice Impress in three ways:

Click the **Close** (x) button from the title bar to directly close the Impress application.

OR

Select the **Exit** option from the **File** menu.

OR

Use the keyboard shortcuts **Alt + F4** or **Ctrl + Q**.

Creating a Presentation

The Presentation Wizard allows you to create a blank presentation from the template. Let us look at both of these methods.

Creating a Blank Presentation

To create a new blank presentation, follow these steps:

1. Click on the **File** menu from the menu bar.
2. Select the **New** → **Presentation** or use the shortcut keys Ctrl + N. The **Presentation Wizard** opens.
3. Select the **Empty Presentation** radio button.
4. Click on the **Create** button. A new blank presentation will appear with the title slide.

Creating a Presentation Using a Template

Templates are a group of slides. It can contain predefined layouts, colours, fonts, and themes that you use as a base or 'starting point' while creating your presentation to save time and effort.

To create a presentation using a template, follow the steps given below:

1. Click on the **File** menu.
2. Select the **New** → **Presentation** option. The **Presentation Wizard** opens.
3. Select the **From template** radio button. A drop-down menu and a list box appear in the **Presentation Wizard**.
4. Select any template of your choice from the list box.
5. Click on the **Create** button.

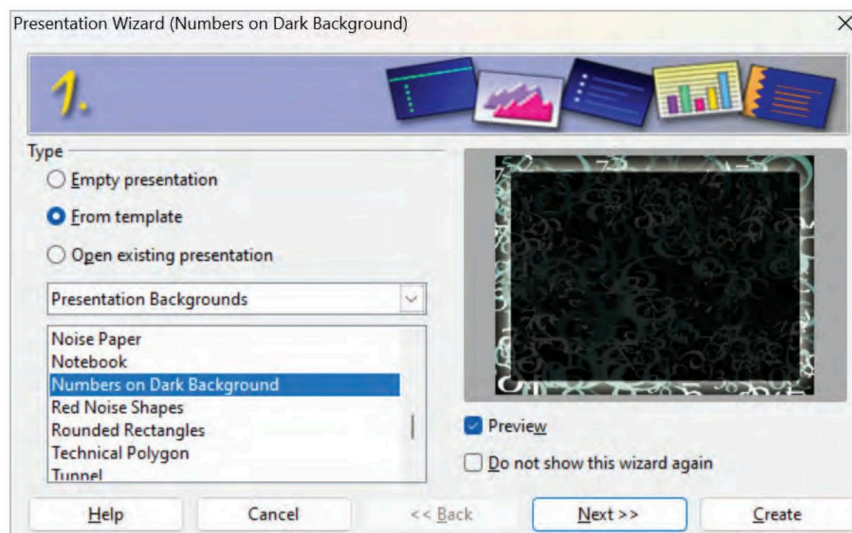

Fig. 16.6: Creating Presentation Using Template

6. A new presentation is created with the selected template, as shown in Fig. 16.7.

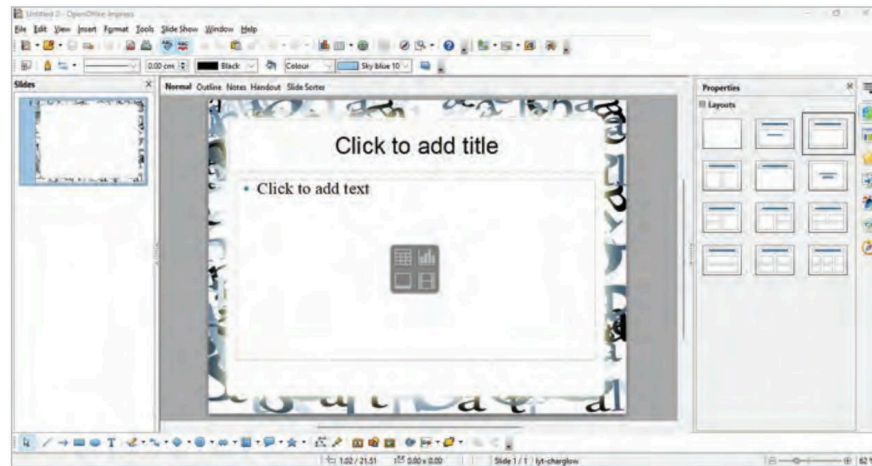

Fig. 16.7: Slide with Template

Selecting Slide Layout

The term "layout" means to organise the elements in a presentable manner. A slide layout refers to the organisation and placement of the elements in the placeholders for text, images, charts, sounds, movies, tables, etc. The slide can be modified in the normal view and the slide sorter view.

The specific layout can be selected from the **Layouts** section of the **Properties** pane, as shown in Fig. 16.8.

Adding Text

Follow the steps given below to add text to a slide:

1. To add text to a slide, click on "**Add Title**". A text box will appear.
2. Type **Class 9** in the text box.
3. Now, click on **Click to add text**.
4. Type the text **Welcome to the class**. As you type, the outline styles are applied immediately to the text.

Fig. 16.9 shows the slide after adding text.

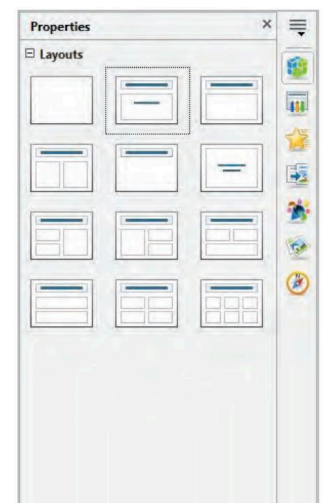

Fig. 16.8: Selecting a Layout in Properties Pane

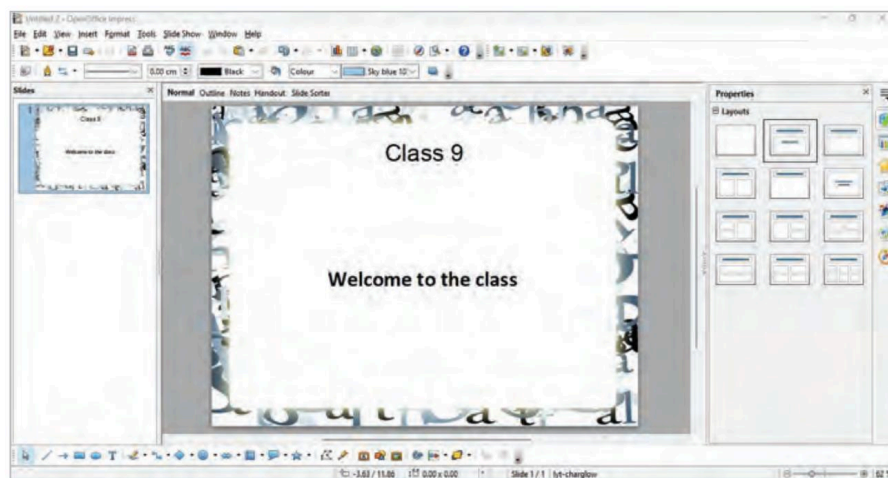

Fig. 16.9: Adding Text to Slide

Saving a Presentation

While creating a presentation, it is very important to save it with a name so that the data may not be lost. To save the presentation, follow these steps:

1. Click on the **File** menu and select the **Save** button.

OR

Use the shortcut key combination **Ctrl + S**.

OR

Click on the **Save** button on the **Standard** toolbar.

The **Save As** dialog box opens.

2. Type the name of the presentation in the **File name** box.
3. Click on the **Save** button, as shown in Fig. 16.10. A presentation in Impress is saved with the extension.odp, by default.

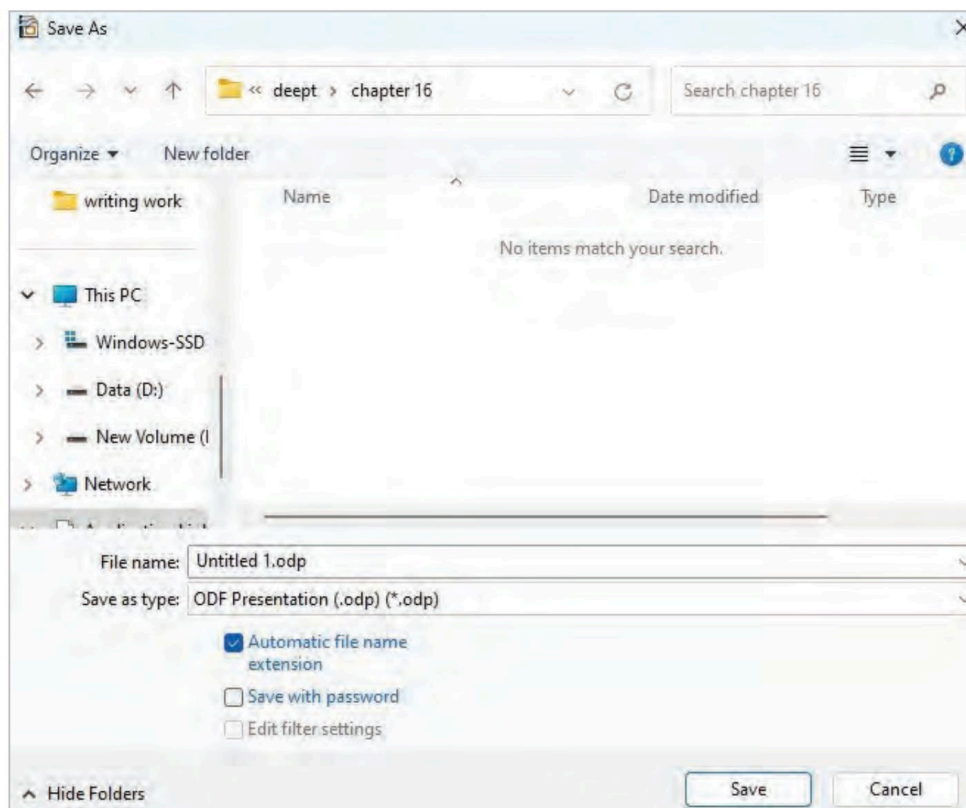

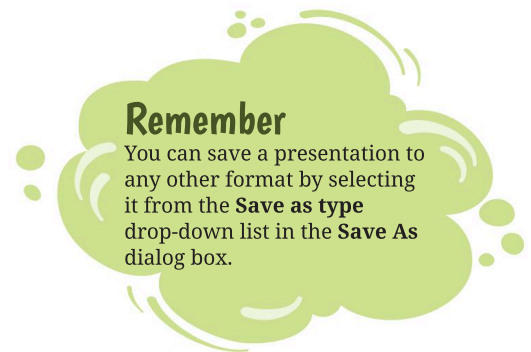

Fig. 16.10: Saving a Presentation

Saving a Presentation in PDF Format

You can save your presentation in PDF format. Adobe Acrobat Reader can be used to view PDF files. To save your presentation in PDF format, follow these steps:

1. Click on the **File** menu.
2. Select the **Export as PDF** option. The **PDF Options** dialog box appears.
3. Click on the **Export** button.

The **Export** dialog box appears.

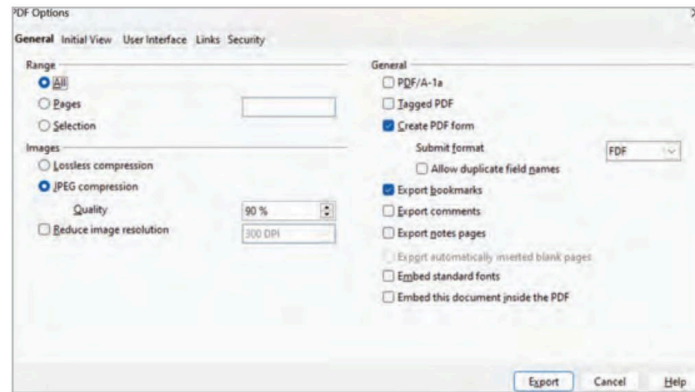

Fig. 16.11: PDF Options Dialog Box

4. Select the location where you want to save the file.
5. Enter the file's name in the **File name** box.
6. Click on the **Save** button. The presentation will be saved as a PDF.

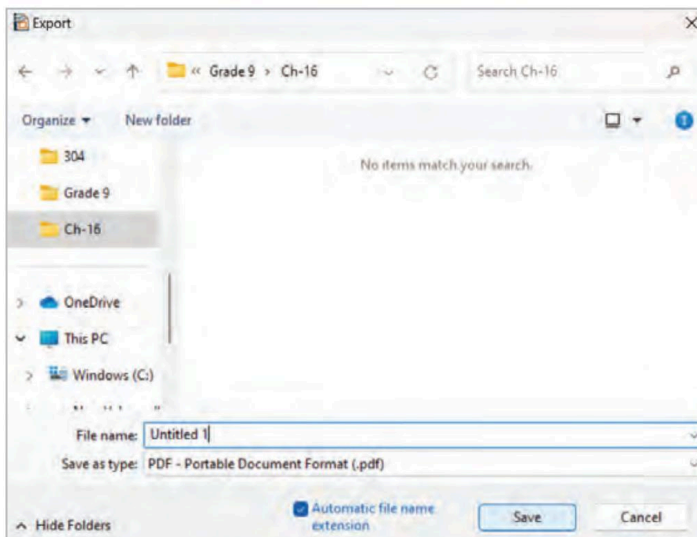

Fig. 16.12: Export Dialog Box

Error Alert!

If you try to open an exported PDF presentation in Impress, it will not open.

Running a Slide Show

As you know, a slide show is a sequence of slides. It is a tool for viewing the presentations. To run a slide show, follow any of the following methods:

1. Press **F5** to start the slide show.
OR
Click on the **Slide Show** icon present on the **Standard** toolbar.
OR
Click on the **Slide Show** menu, and then select **Slide Show**.
2. To go to the next slide or the previous slide, click on the mouse button, or you can use the arrow keys on the keyboard.
3. To open a menu for navigating the slides, right-click anywhere on the screen.
4. To exit the slide show view, press the **Esc** key.

Closing a Presentation

To close a presentation, follow the given steps:

Click on the **File** menu and select **Close**.

OR

Use the keyboard shortcut keys **Ctrl + W**. If you have not saved your presentation, it prompts you to save, which is shown in **Fig. 16.13**:

1. If you click on the **Save** button, the presentation will be saved and then closed.
2. If you click on the **Discard** button, the presentation will close, and all the changes made by you will be lost.
3. If you click on the **Cancel** button, nothing will happen, and you can return to your presentation.

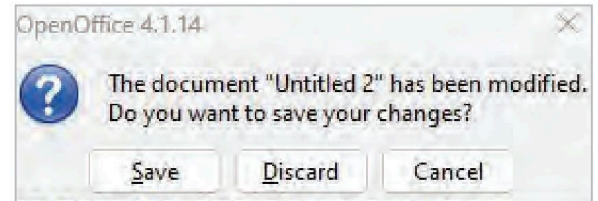

Fig. 16.13: Closing Presentation Message Box

Opening a Presentation

To open a presentation, follow the given steps:

1. Click on the **File** menu and select **Open**.

OR

Use the keyboard shortcut keys **Ctrl + O**.

The **Open** dialog box will appear, as shown in **Fig. 16.14**.

2. Select your presentation.
3. Click on the **Open** button. The presentation will open.

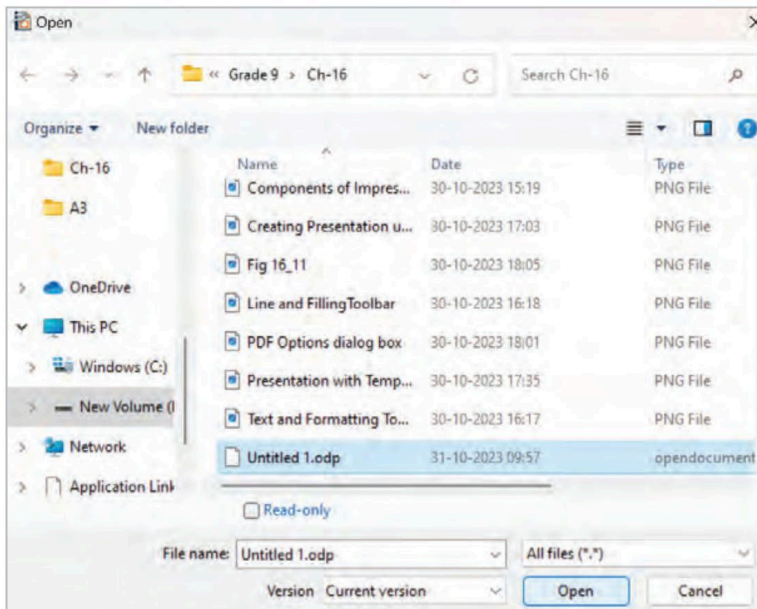

Fig. 16.14: Opening a Presentation

Using the Help Menu

The **Help** menu consists of a list of options through which you can get help on different topics. When OpenOffice Impress's Help menu is clicked, a window containing a list of the available help topics opens, as shown in **Fig. 16.15**. You can click on any of the topics from the left pane or type the name of the topic in the **Search** bar. The details about the selected topic will appear on the right-hand side.

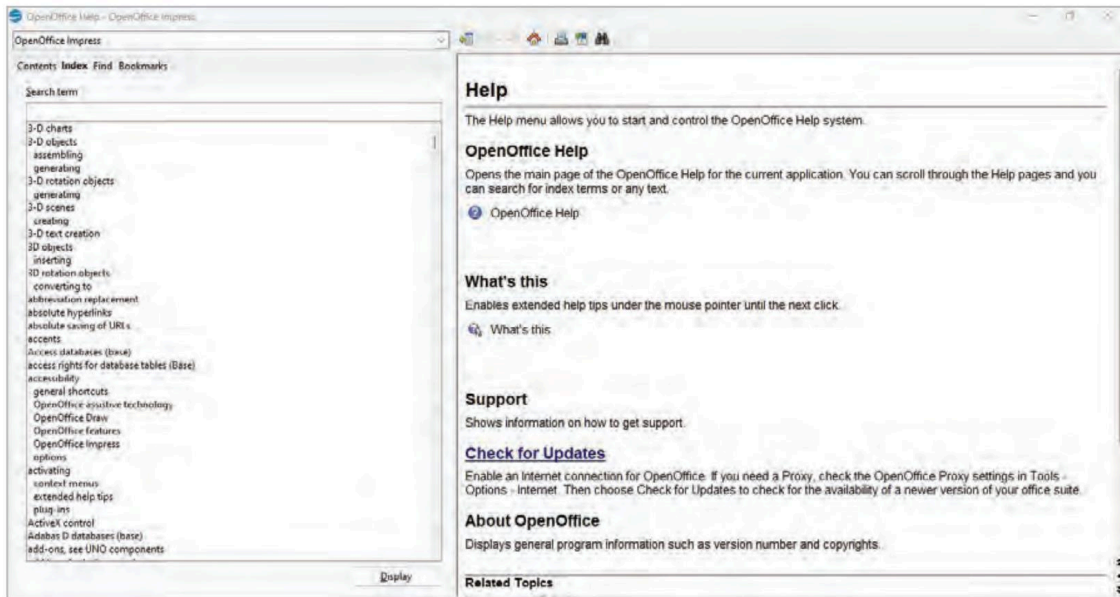

Fig. 16.15: OpenOffice Impress Help

Did You Know?

A former Apple evangelist named Guy Kawasaki suggests that a good presentation should have no more than 10 slides, last no longer than 20 minutes, and use a font size of at least 30 points. This is called the 10-20-30 Rule.

Activity Time

Activity 1: Creating and Exporting a Presentation

(Individual Activity)

Create a presentation (minimum 5 slides) on the topic 'Digital Citizenship' and save the file in PDF format.

Activity 2: Presentation Time

(Individual Activity)

Create a presentation on the topic 'The Most Exciting Cricket Match'. The presentation must contain the following slides:

1. Title of the subject
2. Teams
3. Player Names
4. Runs Scored
5. Winning Team

Chapter Checkup

A Select the correct option.

- 1 Which of these does not belong to the main Impress window?
 - a Slides pane
 - b Workspace
 - c Work pane
 - d Side bar

2 Which of the following keys is used to exit the slide show?

- a Ctrl b Shift
- c Esc d Tab

3 Which view button is not found in the Workspace?

- a Normal view b Thumbnail view
- c Outline view d Notes view

B Fill in the blanks with the most suitable words.

- 1 In OpenOffice Impress, by default, the presentation is saved with _____ extension.
- 2 To open a presentation, click on File > _____.
- 3 In a new blank presentation, the first slide is a _____.
- 4 The shortcut key for slide show is _____.

C State whether the following is *True* or *False*. Correct the statements that are false.

- 1 Slide show is an option for viewing presentations.
- 2 You cannot save your presentation in PDF format.
- 3 The shortcut key combination Ctrl + N is used to create a new blank presentation.
- 4 Click on the Slide Show icon present on the Standard toolbar to run the slide show.

D Answer the following questions. (*Solved*)

Q1. What are templates?

A1. Templates are a group of slides. It can contain predefined layouts, colours, fonts, and themes that you use as a base or 'starting point' when creating your presentation, so as to save time and effort.

Q2. Describe any two components of the OpenOffice Impress window.

A2. • **Slides pane:** It consists of thumbnail images of the presentation's slides, arranged in the order they will be displayed. When you click on a particular slide, it will be shown in the window.

• **Workspace:** Workspace is the middle part of the window, where the slides are created. Normal, Outline, Notes, Handout, and Slide Sorter are its five tabs. These tabs are known as the View buttons.

Q3. Anuj is learning about OpenOffice Impress. Help him understand the interface of Impress window by defining the following terms:

- Slide • Slide show • Placeholder

A3. • **Slide:** A slide is a page of a presentation.

• **Slide show:** It is an option for viewing presentations.

• **Placeholder:** An area in the slide that contains different types of content, including text and images.

Answer Key

A 1. c 2. c 3. b

B 1. .odp 2. Open 3. Title Slide 4. F5

C 1. True.
2. False. You can save your presentation in PDF format.
3. True.
4. True.

17

Working with Slides

OpenOffice Impress is a powerful presentation software that allows you to create slide shows for several purposes. When you create a new presentation, it is created with only one slide, by default. You can include more slides in your presentation as and when required. A new slide can be added to the presentation either by adding an additional slide or a duplicate slide. A duplicate slide is added to a presentation to make a copy of an already present or the current slide. Let's know the steps to add a slide to the presentation.

Inserting a Duplicate Slide

Inserting a duplicate slide means creating an identical copy of an existing slide within your presentation. New slide will have the same content, layout, and any other elements from the original slide. Duplicating a slide is useful when you want to keep a similar structure or content across multiple slides without having to recreate each one manually. Inserting a duplicate slide in Impress is a simple process. To insert a duplicate slide in your presentation, follow these steps:

1. Select the slide in the **Slides** pane.
2. Click on the **Insert** menu.
3. Click on the **Duplicate Slide** option (Fig. 17.1).

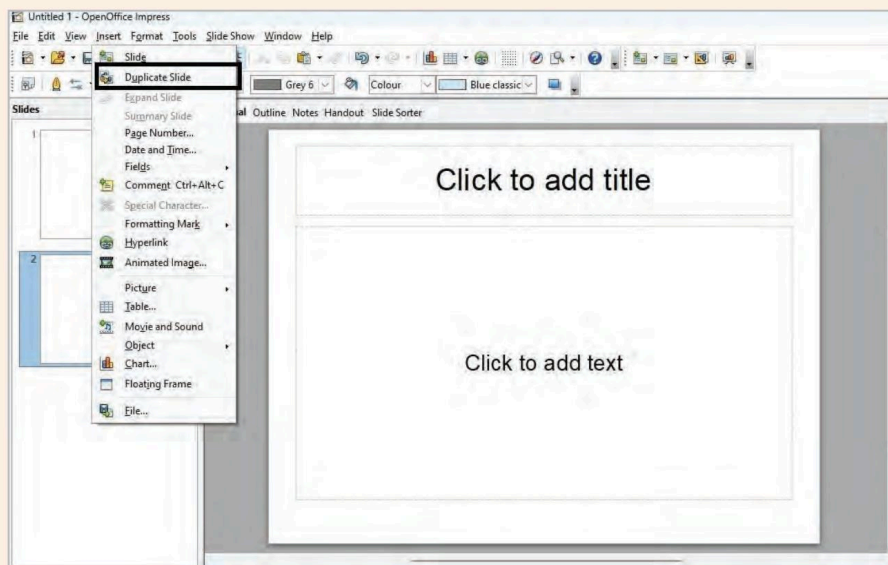

Fig. 17.1: Inserting a Duplicate Slide

A copy of the selected slide would appear in the Slides pane.

Inserting a New Slide

You can insert a new slide in the presentation as per your requirement. Following are the steps to insert a new slide:

1. Select the slide in the **Slides** pane.
2. Click on the **Insert** menu from the menu bar.
3. Select the **Slide** option (Fig. 17.2).

OR

1. Right-click on the **Slides** pane where you want to add a new slide.
2. Select the **New Slide** option from the context menu.

OR

Use the keyboard shortcut **Ctrl + M** key.

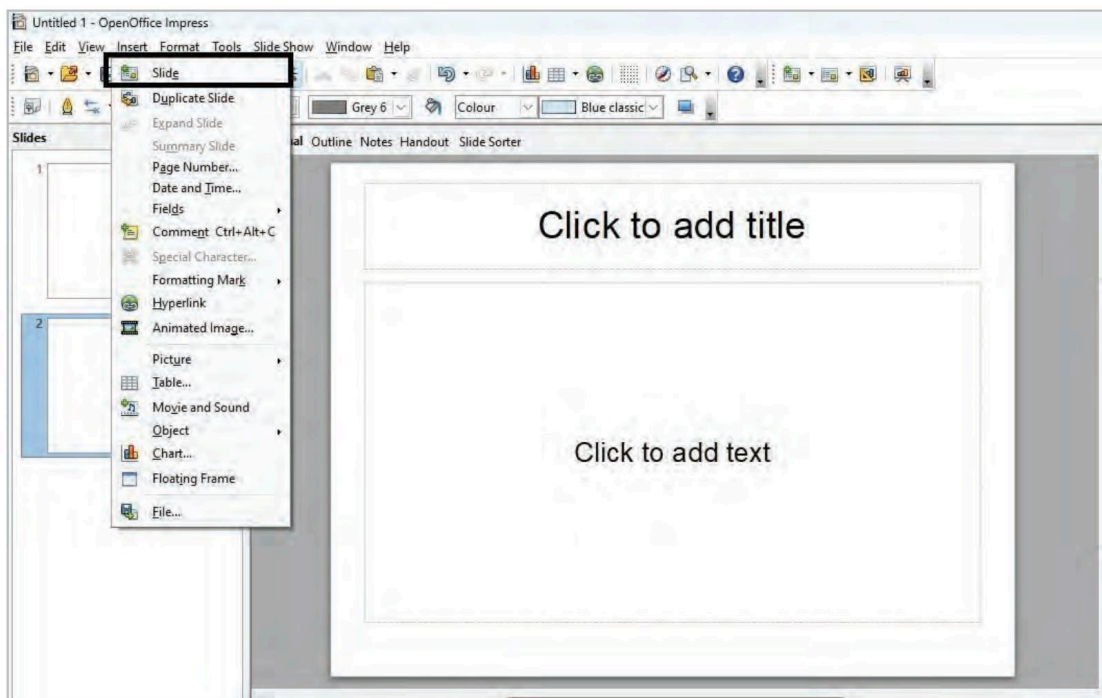

Fig. 17.2: Inserting a New Slide

Slide Layout

The arrangement of objects on a slide is determined by the slide layout. It has placeholders for the text, pictures, and title. You must apply a slide layout after adding a new slide. To change the layout of a slide, follow these steps:

1. Click on the slide in the **Slides** pane.
2. Click on the **Format** menu from the menu bar.
3. Select the **Slide Layout** option.

OR

1. Right-click on the selected slide.

2. Select the **Slide Layout** option from the context menu.

The slide layout options will appear in the **Properties** pane (Fig. 17.3).

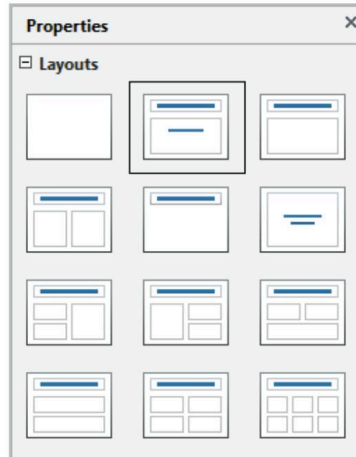

Fig. 17.3: Different Slide Layouts in Properties Pane

Copying and Moving Slides

Copying a slide means to make a duplicate of the slide. On the other hand, moving a slide means to remove it from its original position and place it to another position. You can easily copy and move slides within a presentation.

Copying Slides

Steps to copy a slide are:

1. Select a slide in the **Slides** pane that you want to duplicate.
2. Right-click on the selected slide.
3. Select the **Copy** option to copy it or use the keyboard shortcut key **Ctrl + C**, as shown in Fig. 17.4.

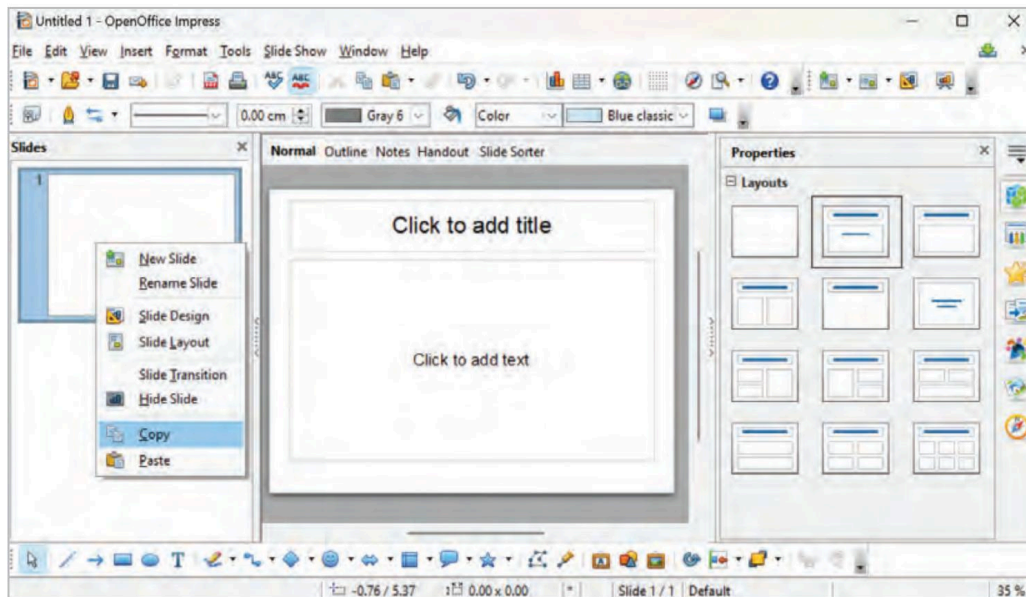

Fig.17.4: Copying a Slide

4. To paste it, right-click in the blank space in the **Slides** pane.

5. Choose the **Paste** option or use the keyboard shortcut key **Ctrl + V** (see Fig. 17.5).

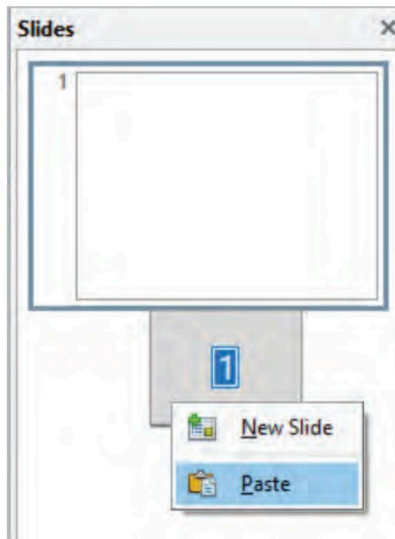

Fig.17.5: Pasting a Slide

OR

1. Select the slide in the **Slides** pane that you want to copy.
2. Click on the **Edit** menu.
3. Select the **Copy** option (Fig. 17.6).

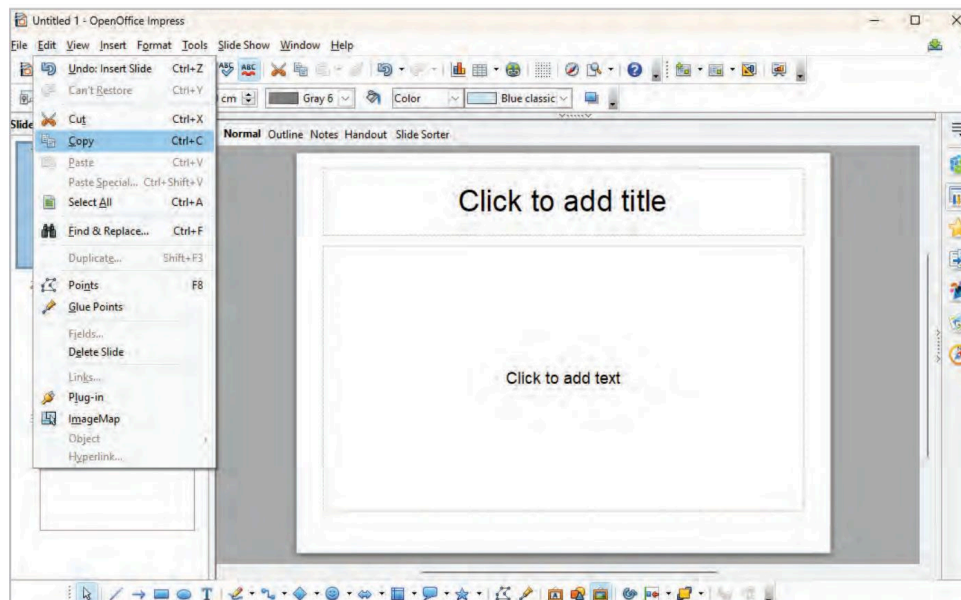

Fig. 17.6: Copying a Slide

You can also use the **Copy** and **Paste** icons from the **Standard** toolbar to copy and paste a slide.

Moving Slides

Here are the steps to move the slides:

1. Select the slide in the **Slides** pane.
2. Click on the **Edit** menu.

3. Select the **Cut** option or press the **Ctrl + X** key. The selected slide is removed from its position.
4. Again, click on the **Edit** menu.
5. Select the **Paste** option or press the **Ctrl + V** key (Fig. 17.7). The slide will appear again in the Slides pane.

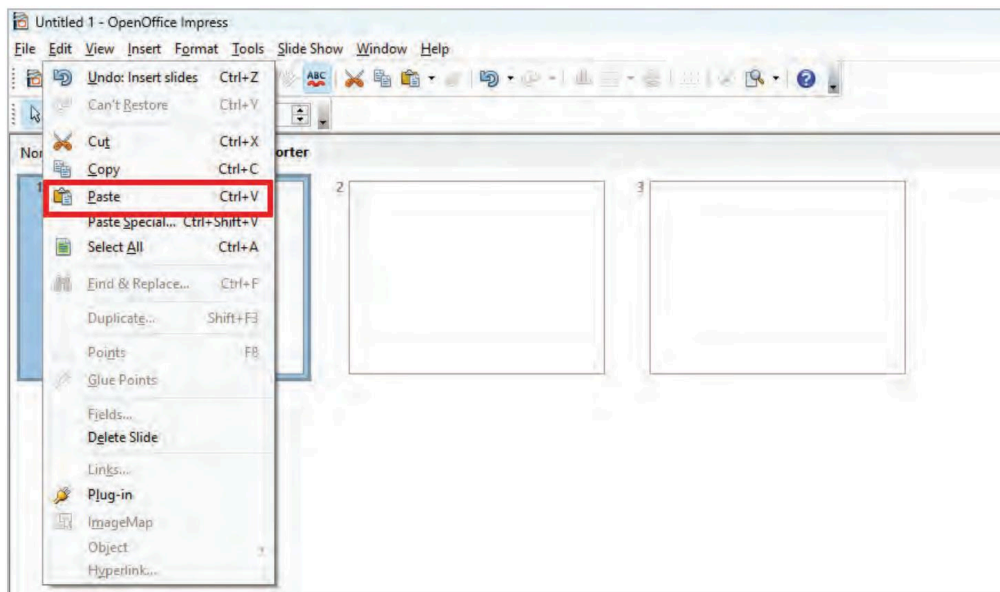

Fig. 17.7: Moving a Slide

OR

You can also move a slide by dragging it in the **Slides** pane and dropping it to the desired position.

Deleting Slides

Deleting slides means to remove them permanently from the presentation. To delete a slide, follow these steps:

1. Click on the slide in the **Slides** pane that you want to delete.
2. Right-click on the selected slide.
3. Select the **Delete Slide** option from the shortcut menu (Fig. 17.8).

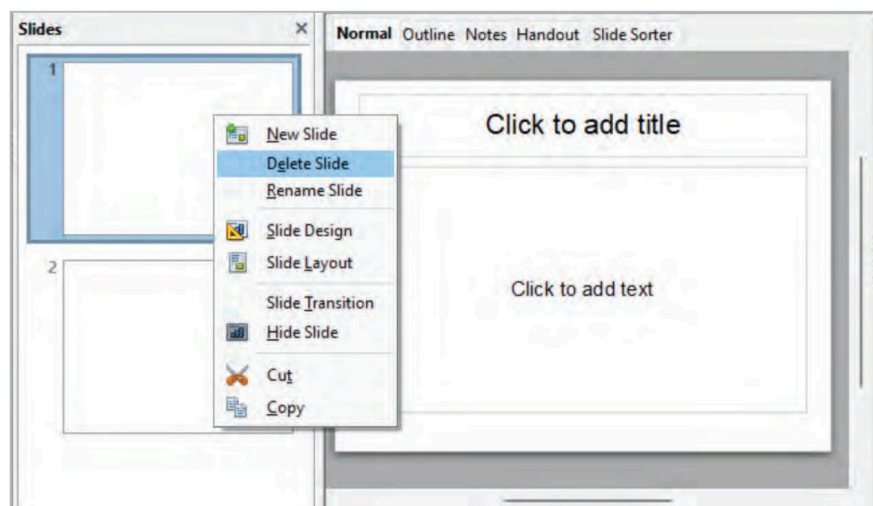

Fig. 17.8: Deleting a Slide

OR

1. Click on the slide in the **Slides** pane that you want to delete.
2. Press the **Delete** or **Backspace** key.
3. The slide will be deleted.

Renaming Slides

Renaming a slide means changing the name of a slide. To rename the slide, follow these steps:

1. Click on the slide in the **Slides** pane that you want to rename.
2. Right-click on the selected slide.
3. Select the **Rename Slide** option. The **Rename Slide** dialog box opens.
4. Type the new name in the **Name** text box (Fig. 17.9).
5. Click on the **OK** button.

Fig. 17.9: Renaming a Slide

Copying, Moving, and Deleting Content

Similar to a slide, content of the slide can be copied, moved, and deleted.

Copying and Moving Content

The copy and paste functions allow you to duplicate content such as text, images, and other types of data from one location to another without retyping every time.

The steps to copy the content are as follows:

1. Select the text to copy.
2. Right-click on the selected text.
3. Select the **Copy** option (Fig. 17.10).

OR

Press **Ctrl + C** key on the keyboard.

OR

Select the **Edit > Copy** option from the menu bar.

4. Move to the location where you want to paste the copied content.
 5. Right-click and select the **Paste** option (Fig. 17.11).
- OR
- Press the **Ctrl+V** key on the keyboard.

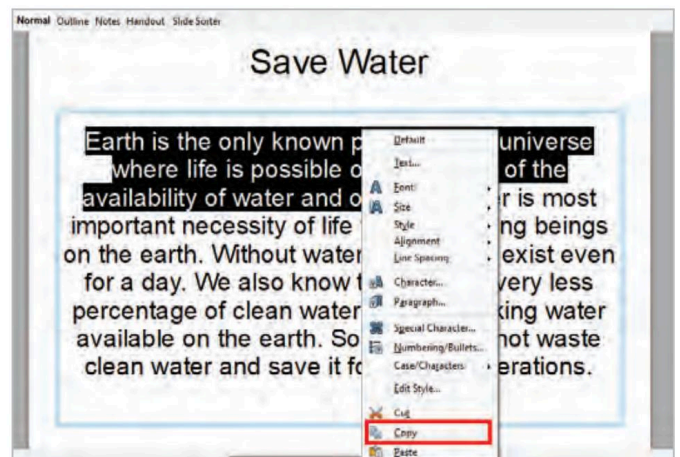

Fig. 17.10: Copying Content

OR

Select the **Paste** option from the **Edit** menu.

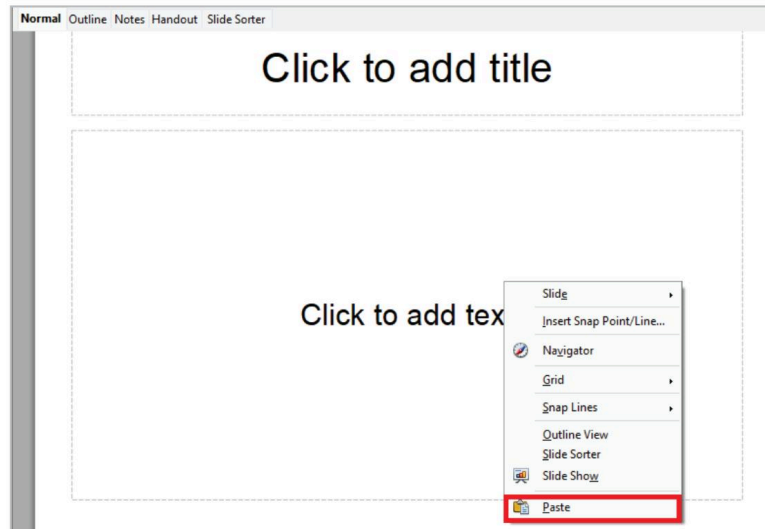

Fig. 17.11: Pasting Content

To move the content, follow the steps given below:

1. Select the text to copy.
2. Right-click on the selected text.
3. Select the **Cut** option.

OR

Press **Ctrl + X** key on the keyboard.

OR

Select the **Edit > Cut** option from the menu bar.

4. Move to the location where you want to paste the content.
5. Right-click and select the **Paste** option.

Deleting the Content

To delete the content from the slide:

1. Select the text that you want to delete.
2. Press the **Delete** key on your keyboard.

If the presentation was created in a newer version of the software and is being opened in an older version, it may cause errors.

Viewing a Presentation

OpenOffice Impress provides different views to help you create and manage presentations effectively. By default, you work in the **Normal** view. You can set the view of the presentation to be larger, smaller, or medium.

Controlling the Size of the View

In OpenOffice Impress, you can control the size of the view of your presentation by adjusting the zoom level. The zoom level determines how much of the presentation is visible on the screen.

There are several alternative methods for zooming in OpenOffice Impress. These include:

Click the **View** menu and select the **Zoom** option to open the **Zoom & View Layout** dialog box.

OR

Using the **Zoom** button found on the **Standard** toolbar.

OR

Adjusting the zoom slider located on the status bar.

You can view the slide at 100% or vary the Zoom Percentage by selecting the option **Variable**, as shown in the Fig. 17.12.

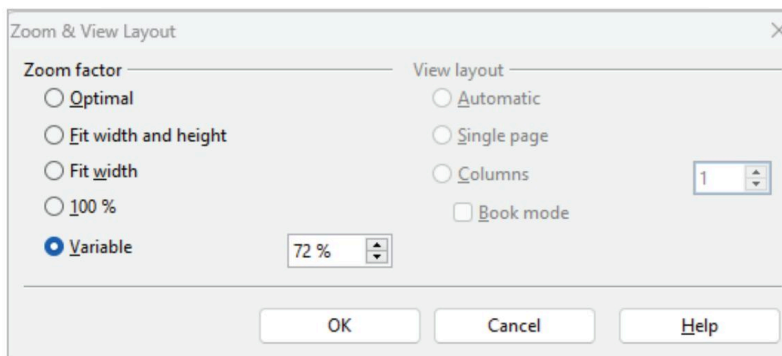

Fig. 17.12: Zoom and View Layout Dialog Box

Workspace Views

There are five types of views available. You can select any view from the **View** menu (Fig. 17.13).

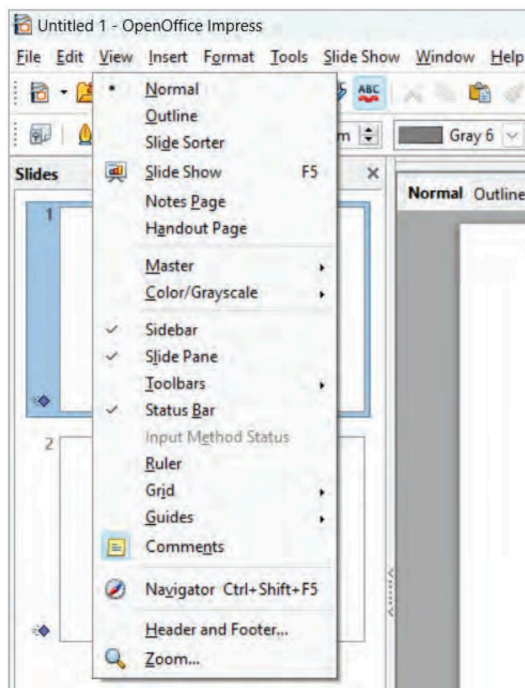

Fig. 17.13: Selecting Views

Normal View

This is the default view and provides a workspace where you can create and edit slides. In this view, you can see the Slides pane on the left and the main slide editing area in the central workspace. (Fig. 17.14).

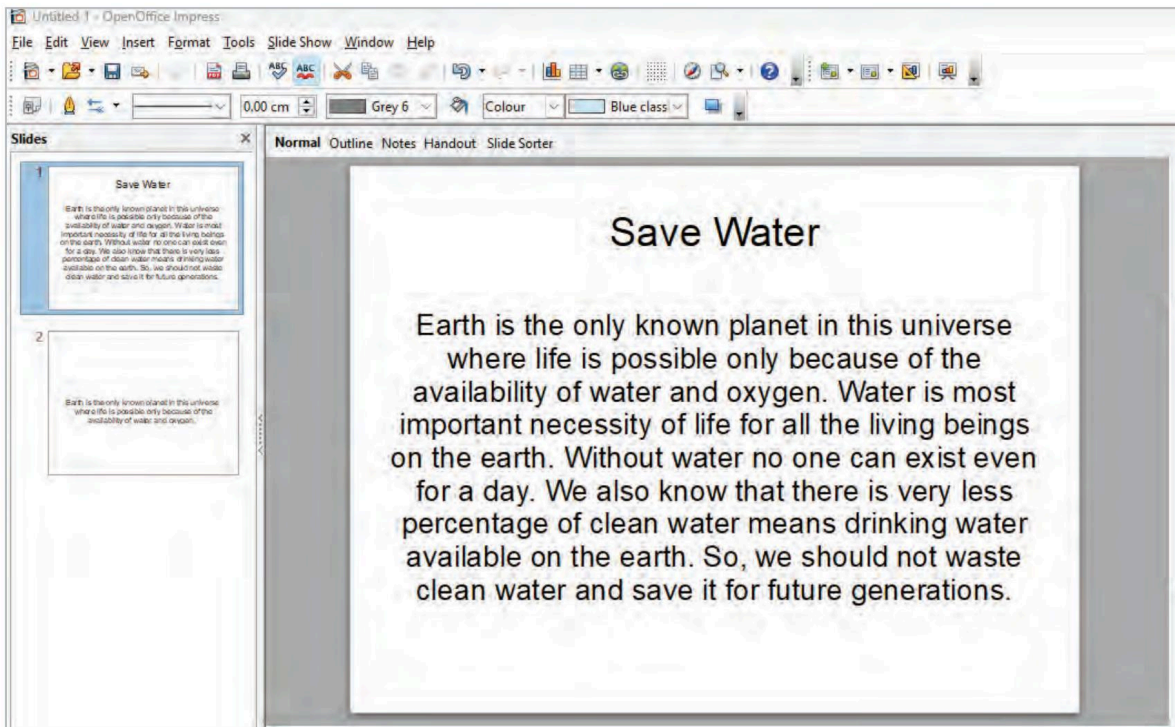

Fig. 17.14: Normal View

Outline View

In this view, you can see the text content of your slides in an outline format. It is a helpful view for organising and structuring the content of your presentation (Fig. 17.15).

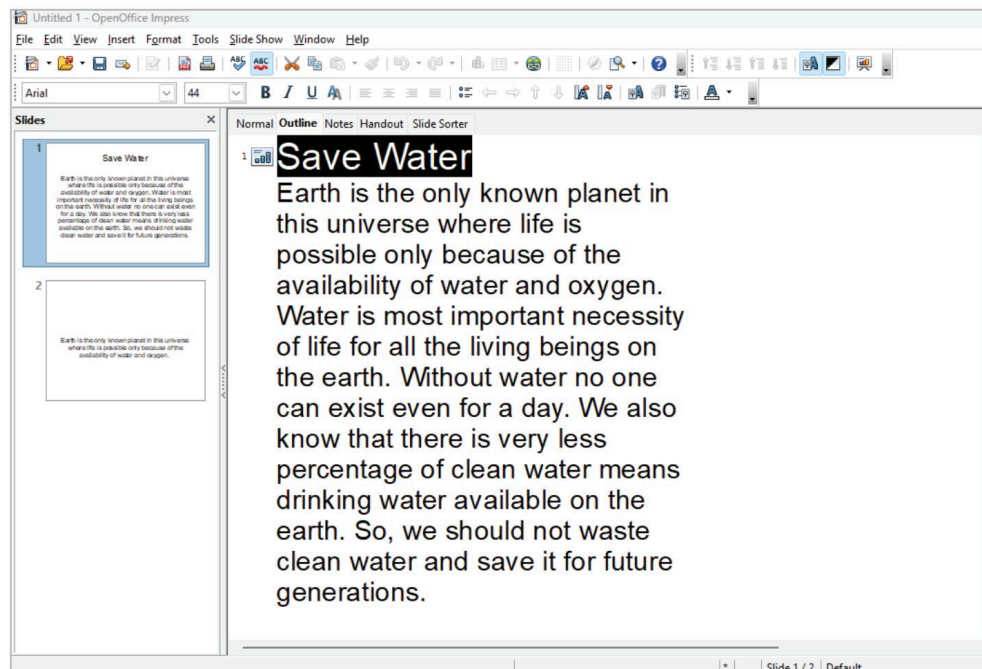

Fig. 17.15: Outline View

Slide Sorter View

The slide sorter view displays thumbnails of all slides in your presentation. It allows you to easily rearrange the order of slides and get an overview of the entire presentation (Fig. 17.16).

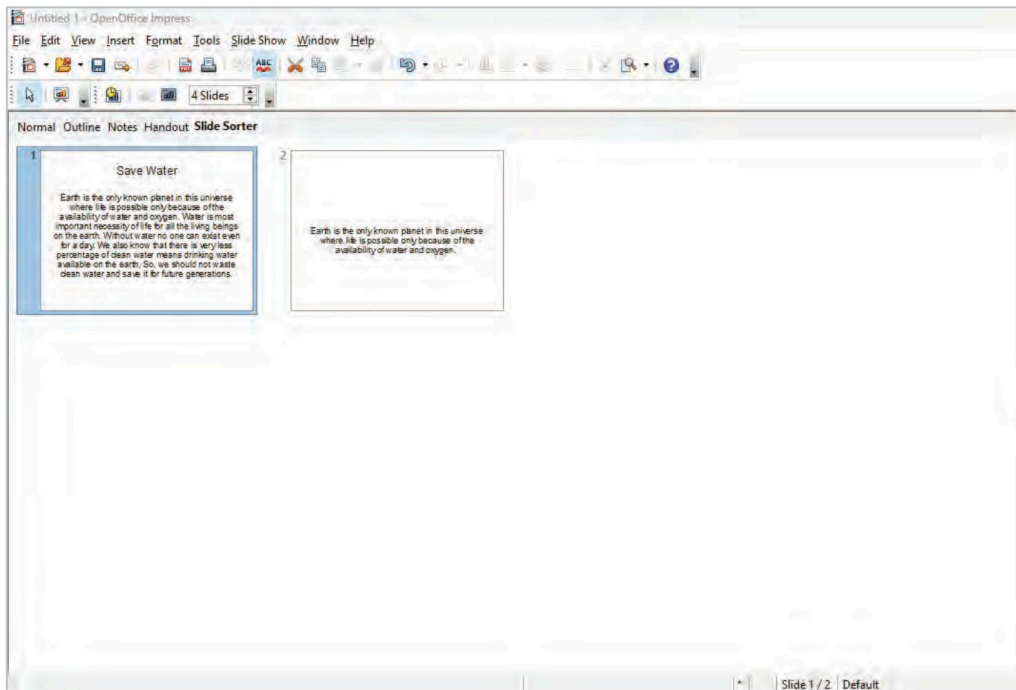

Fig. 17.16: Slide Sorter View

Notes View

In this view, you can add and view speaker notes associated with each slide. These notes are not visible during the actual presentation but can be useful for the presenter (Fig. 17.17).

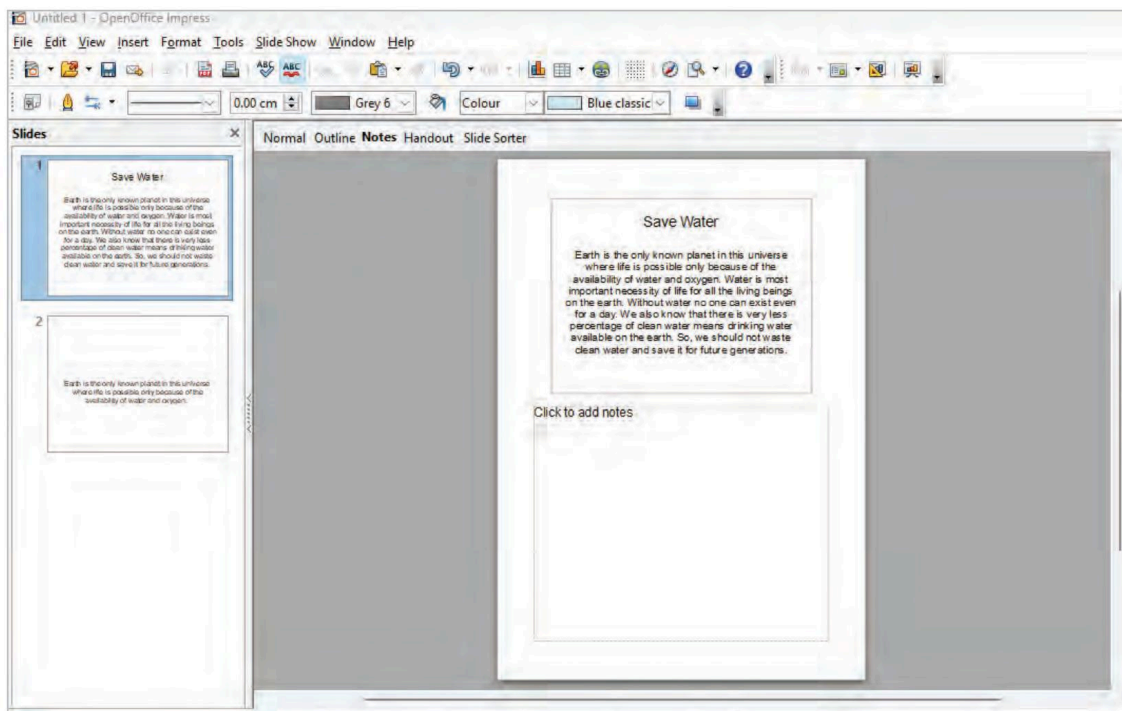

Fig. 17.17: Notes View

Handout View

The handout view allows you to create handouts for your audience. You can customise the layout and content that will be printed or distributed to your audience (Fig 17.18).

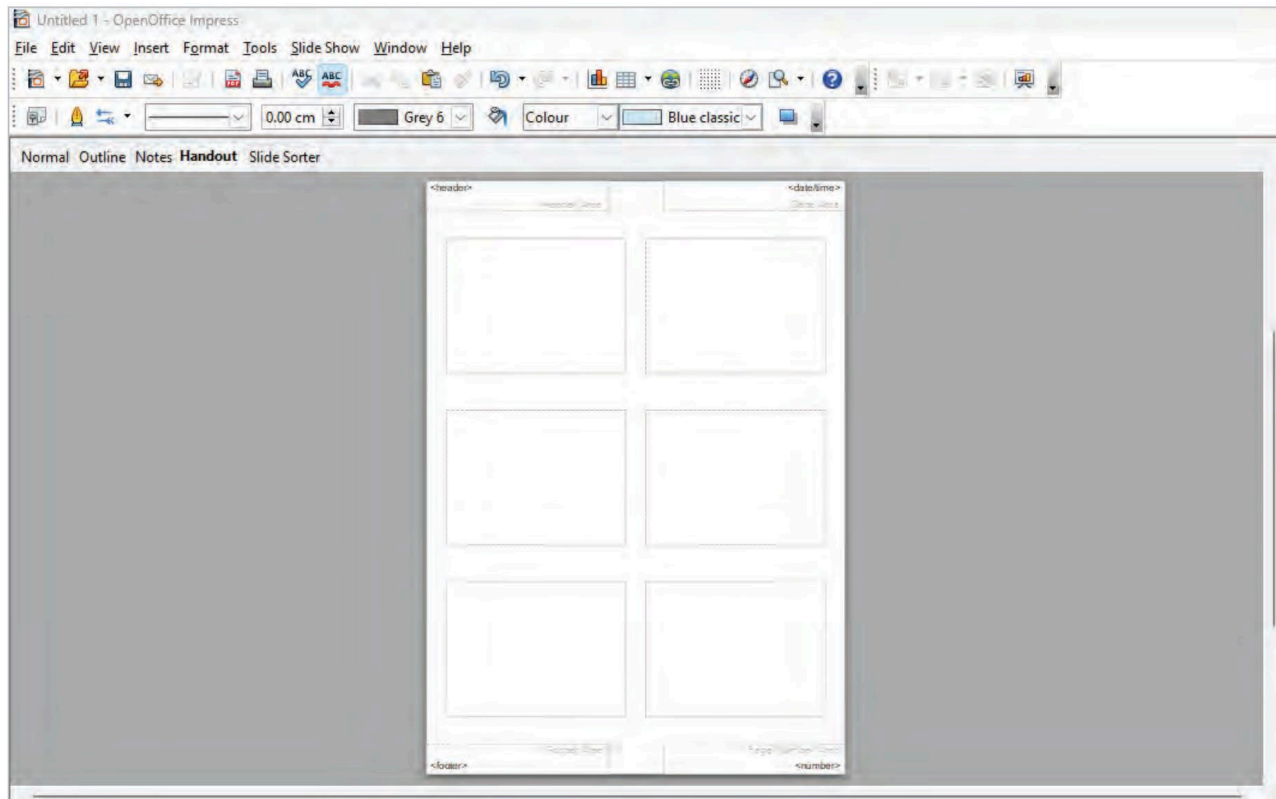

Fig. 17.18: Handout View

Slide Show View

The slide show view is used to present slides to an audience. It takes up the full screen, and you can navigate through the slides using keyboard keys or mouse controls.

Remember

If you're sharing the presentation on a different computer that doesn't have the same fonts installed, it might result in errors. The solution for this is to use the standard fonts that are likely to be available on most computers.

Did You Know?

Before computer-based presentations, presenters used physical slides, which were transparent sheets with images or text that could be projected onto a screen using a slide projector.

Activity Time

Activity 1: Creating a Presentation

(Individual Activity)

Create a presentation on the topic **The Role of IT in Digital Transformation**. Also perform the following actions for the presentation:

- Add title of the presentation
- Insert at least five new slides
- Rename each slide
- Start the slide show

Activity 2: Using Slide Sorter View

(Individual Activity)

Display all the slides of the above presentation in the Slide Sorter view.

Chapter Checkup

A Select the correct option.

- 1 Which view is typically used for creating and formatting slides?

a Normal View	b Outline View
c Notes View	d Slide Sorter View
- 2 In which view, you can add and view speaker notes associated with each slide?

a Slide Show View	b Handout View
c Notes View	d Slide Sorter View
- 3 Which of the following is the shortcut key to insert a new slide?

a Ctrl + M	b Ctrl + N
c Ctrl + W	d Ctrl + O

B Fill in the blanks with the most suitable words.

- 1 _____ a slide means to make a duplicate of the slide.
- 2 Creating an identical copy of an existing slide is called _____.
- 3 You can see the full slide in the workspace if you are in the _____ view.
- 4 _____ view displays thumbnails of all slides in your presentation.

C State whether the following is *True* or *False*. Correct the statements that are false.

- 1 The arrangement of objects on a slide is determined by the slide layout.
- 2 The shortcut key Ctrl + C is used to cut the text.
- 3 Slide Show view is used for presenting your slides to an audience.
- 4 The shortcut key Ctrl + V is used to paste the text.

D Answer the following questions. (Solved)

Q1. What is the meaning of moving a slide?

A1. Moving a slide means to remove it from its original position and place it to another position.

Q2. Write the steps to insert a new slide in your presentation.

A2. Here's how you can insert a new slide:

- Right-click on the Slides pane where you want to add a new slide.
- Select the New Slide option from the context menu.

Q3. Nimisha is working on a presentation in OpenOffice Impress. She has some doubts related to the different views in the presentation. Help her describing the following views:

- Normal View
- Outline View
- Slide Sorter View

A3. Normal View: This is the default view and provides a workspace where you can create and edit slides. In this view, you can see the Slides pane on the left and the main slide editing area.

Outline View: In this view, you can see the text content of your slides in an outline format. It is a helpful view for organizing and structuring the content of your presentation.

Slide Sorter View: The slide sorter view displays thumbnails of all slides in your presentation. It allows you to easily rearrange the order of slides and get an overview of the entire presentation.

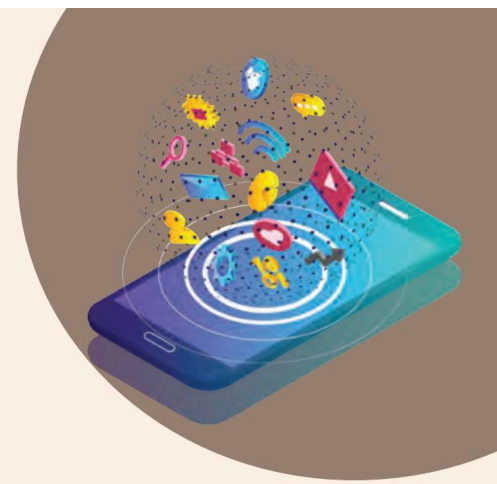

Answer Key

A 1. a 2. c 3. a

B 1. Copying 2. Duplicate slide 3. Normal 4. Slide Sorter

C 1. True.
2. False. The shortcut key Ctrl + C is used to copy the text.
3. True.
4. True.

18

Formatting Text and Applying Animations

Formatting refers to changing the look and appearance of text and other elements in a presentation to make it attractive. It enhances the look of the presentation and gives a dynamic feel to the audience. The contents of the slides can be formatted in several ways:

1. By using the Text Formatting toolbar
2. By selecting Format > Text from the menu bar
3. By using the keyboard shortcuts

Let us discuss these methods one by one.

Text Formatting Toolbar

You can format the contents of a slide by using the icons on the **Text Formatting** toolbar. It is the most commonly used method. Some of the icons of the Text Formatting toolbar are shown in Fig. 18.1.

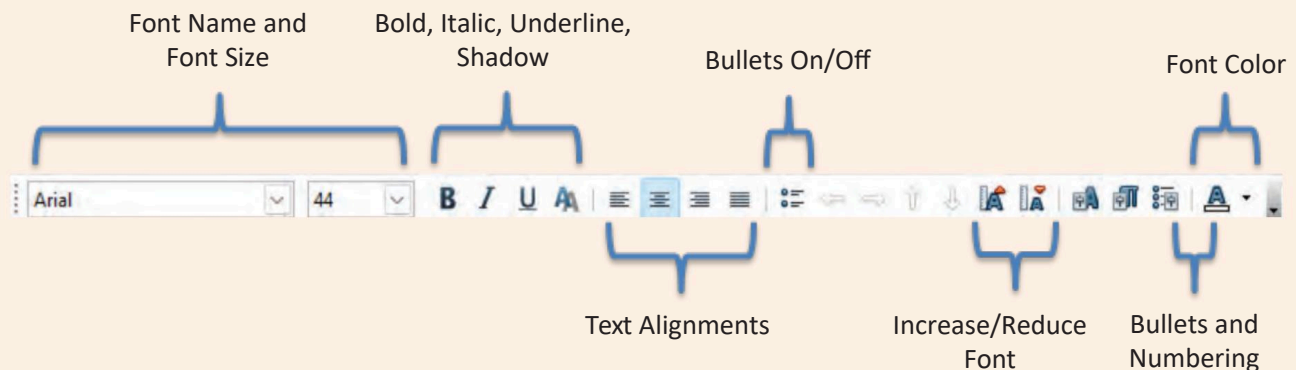

Fig. 18.1: Text Formatting Toolbar

Font Name Font is the look and shape of the text. There are various fonts available in Impress. To change the font of the text, follow the given steps:

1. Select the text to change the font.
2. Click on the **Font Name** drop-down arrow. A list of different fonts appears.
3. Select a desired font from the list that you want to apply to the text.

Font Size Font size refers to the size of the text. To change the font size of the text, follow the given steps:

1. Select the text to change the size.
2. Click on the drop-down arrow of the **Font Size** combo box. A list of different font sizes appears.
3. Select a desired font size that you want to apply to the text. You can also change the font size by directly typing the size of the font in the **Font Size** combo box. Beside this, you can use the Increase Font  and Reduce Font  icons on the Text Formatting toolbar to increase or decrease the font size of the text, respectively.

Bold To bold the text:

1. Select the text.
2. Click on the **Bold(B)** icon in the **Text Formatting** toolbar or press the **Ctrl + B** key.

Italic To italic the text:

1. Select the text.
2. Click on the **Italic(I)** icon in the **Text Formatting** toolbar or press the **Ctrl + I** key.

Underline To underline the text:

1. Select the text.
2. Click on the **Underline (U)** icon in the **Text Formatting** toolbar or press the **Ctrl + U** key.

Shadow It allows to add a shadow behind the objects on a slide.

Aligning Text We use the alignment icons to align the text. In Impress, there are four alignment icons (Fig. 18.1):

1. **Align Left:** The text is aligned along the left margin. Use shortcut keys Ctrl+L for left alignment.
2. **Centred:** The text is aligned centrally between the left and right margins. This is the default alignment. Use shortcut keys Ctrl + E for center alignment.
3. **Align Right:** The text is aligned along the right margin. Use shortcut keys Ctrl + R for right alignment.
4. **Justified:** The text is aligned evenly between the left and right margin. Use shortcut keys Ctrl + J for justified alignment.

Bullets On/Off Bullets On/Off icon allows you to enable or disable bullets in your presentation.

Bullets and Numbering Bullets and numbering are used to create an unordered list and an ordered list, respectively, in your presentation. Bullets and numbering are most commonly used to highlight key points. These are used to make a list more presentable and readable.

To create bulleted or numbered lists, follow the given steps:

1. Select the text you want to convert to bulleted or numbered list.
2. Click on the **Bullets and Numbering** icon. The **Bullets and Numbering** dialog box opens that displays the different types of bullets and numbering styles in their respective tabs.
3. Select the list style of your choice (Fig. 18.2).

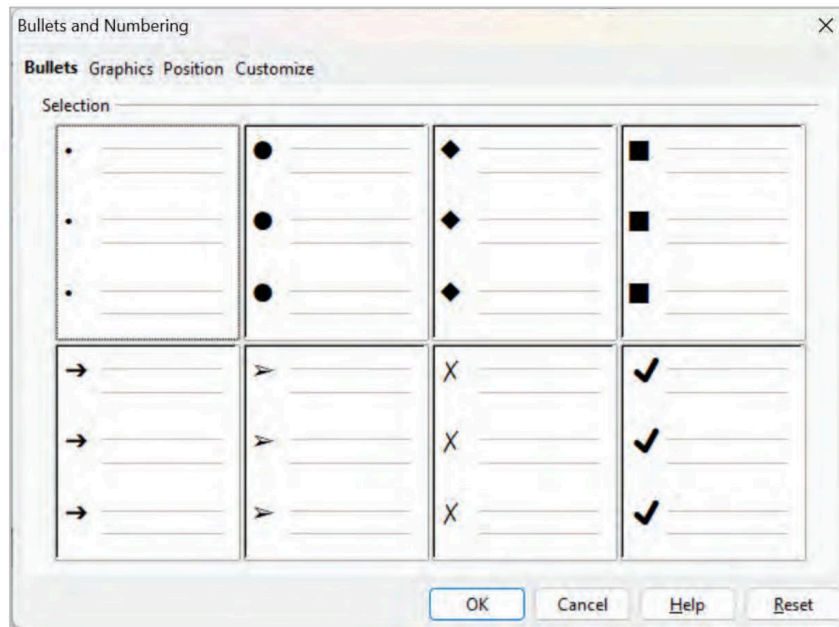

Fig. 18.2: Bullets and Numbering Dialog Box

4. To add more items in the list, place the cursor at the end of the list and press the **Enter** key.

Font Colour To change the colour of the text, follow the given steps:

1. Select the text to change the font colour.
2. Click on the **Font Color**  icon in the **Text Formatting** toolbar. The colour palette appears.
3. Select the required colour from the colour palette that you want to apply to the text.

Error Alert!

It is important to ensure that text is formatted within a designated text box rather than directly on an image. For better control, you can add text boxes to images.

Custom Animation

Custom animation means that you can apply animation effects that are unique and specific to each object or part in a slide. By using it, you can decide when and how the objects show up, move, or disappear during a presentation. Animation effects can make your presentation more dynamic.

Applying Animation

You can apply animations effect on a slide in **Normal** view.

To apply an animation effect to an object, follow the given steps:

1. Select the object on which you want to apply animation.
2. Click on the **Custom Animation**  icon from the sidebar.

The **Custom Animation** pane appears. You can also open the **Custom Animation** pane by selecting the **Custom Animation** option from the **Slide Show** menu or by right-clicking the object and then selecting the **Custom Animation** option from the context menu.

3. Click on **Add** button (Fig. 18.3).
4. The **Custom Animation** dialog box appears that shows the different tabs to choose different categories of effects.
5. Select the desired effect from the tabs.

6. Select the speed such as slow, medium, fast, or very fast of animation from the **Speed** list box.
7. Select the **Automatic preview** check box to preview the animation.
8. Click on the **OK** button to apply the selected animation and close the **Custom Animation** dialog box (Fig. 18.4).

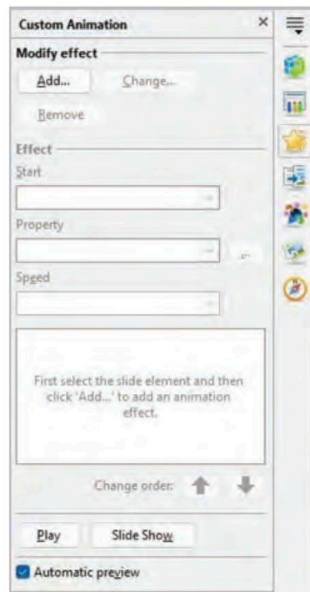

Fig. 18.3: Custom Animation Pane

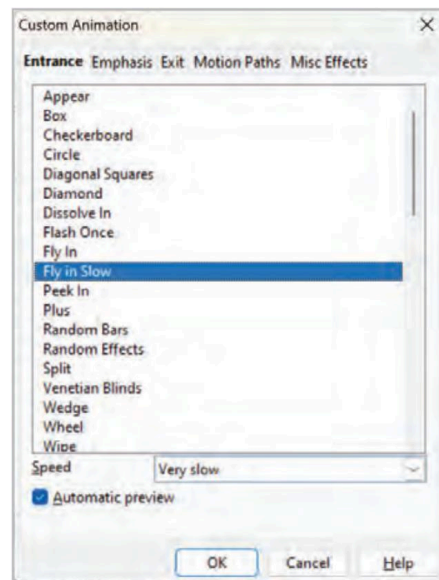

Fig. 18.4: Custom Animation Dialog Box

Now, you can choose how to start the animation, change the speed, and some additional properties of the selected effect by using the various options available in the **Custom Animation** pane.

Starting an Animation Effect

The **Start** option in the **Custom Animation** pane allows you to set the order in which animations occur. There are three ways for starting an animation effect, as shown in (Fig. 18.5).

1. **On Click:** The animation stops at this effect until the next mouse click.
2. **With Previous:** The animation runs at the same time as the previous animation.
3. **After Previous:** The animation runs as soon as the previous animation ends.

Additional Properties of an Animation Effect

Many animations have properties that you can set or change. For example, if you choose the **Change Font Size** effect on the **Emphasis** category, you can specify the font size. If you choose **Fly In** on the **Entrance** category, you can specify the direction from which the object flies in.

The properties changes depending on the choices available for each effect. For example, a **Fly In** effect has a box labeled **Direction** and a **Change Font Size** effect has a box labeled **Font Size**.

Removing an Animation Effect

To remove the animation effect from an object, following steps are used:

1. Select the object from which to remove the animation effect.

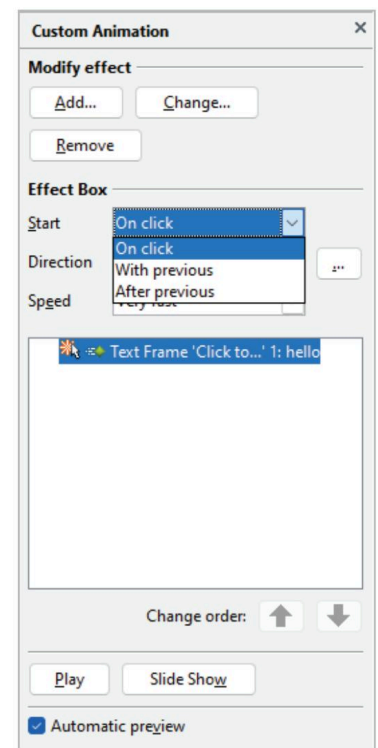

Fig. 18.5: Custom Animation Pane

2. Click on the **Remove** button in the **Custom Animation** pane.

Remember

You can apply one or more animation effects on an object.

Did You Know?

Bob Gaskins, along with Dennis Austin, founded Forethought, Inc., the company that originally developed PowerPoint.

Activity Time

Activity 1: Creating a Presentation

(Individual Activity)

You are assigned the charge of co-curricular activities in your school. Make a presentation on these activities. Use your creative sense and make it attractive.

Activity 2: Formatting a Presentation

(Individual Activity)

Make a presentation on the topic **Benefits of Yoga and How to Incorporate It into your Routine**.

Make it attractive using the mentioned font size, colour, and style.

1. Title of the presentation—Arial Black (16), Underlined
2. Index—Verdana (14)
3. Text—Times New Roman (12)

Chapter Checkup

A Select the correct option.

1. Which feature allows you to align the text?
☐ a Text Organizer ☐ b Text Alignment ☐ c Text Effects ☐ d Text Animation
2. Which menu is used to access text formatting features?
☐ a File ☐ b Edit ☐ c View ☐ d Format
3. What does the Start option in the Custom Animation pane allow you to control in OpenOffice Impress?
☐ a The order in which animations occur ☐ b The speed of animation
☐ c The background color of the slide ☐ d The duration of the animation

B Fill in the blanks with the most suitable words.

1. The shortcut key combination Ctrl + U is used to _____ text.
2. The size of character/letter is called _____.
3. _____ are used to make a list more presentable and readable.
4. _____ is the look and shape of the letters of the text.

C State whether the following is *True* or *False*. Correct the statements that are false.

1. Bullets and Numbering option is available under File menu.
2. Impress allows you to apply different fonts and font styles to individual words.
3. Animations once applied can be changed but cannot be removed.
4. The Normal view is used to apply animation on the content of slide.

D Answer the following questions. (Solved)

Q1. What is formatting?

A1. Formatting refers to changing the look and appearance of text and the other elements in a document to make it attractive.

Q2. Explain the different alignments options.

A2. In Impress, there are four types of alignments:

- **Align Left:** The text is aligned along the left margin. Use shortcut keys Ctrl+L for left alignment.
- **Centred:** The text is aligned centrally between the left and right margins. This is the default alignment. Use shortcut keys Ctrl + E for center alignment.
- **Align Right:** The text is aligned along the right margin. Use shortcut keys Ctrl + R for right alignment.
- **Justified:** The text is aligned evenly between the left and right margin. Use shortcut keys Ctrl + J for justified alignment.

Q3. Suman wants to apply an animation effect to an object on the slide. Help her by writing steps to apply an animation effect.

A3. To apply an animation effect to an object, following steps are used:

- Select the object on which you want to apply animation.
- Click on the Custom Animation icon from the sidebar.
The Custom Animation pane appears. You can also open the Custom Animation pane by selecting the Custom Animation option from the Slide Show menu or by right-clicking the object and then selecting the Custom Animation option from the context menu.
- Click on the Add button.
- The Custom Animation dialog box appears that shows the different tabs to choose different category of effects.
- Select the desired effect from the tabs.
- Select the speed such as slow, medium, fast and very fast of animation from the Speed list box.
- Select the Automatic preview check box to preview the animation.
- Click the OK button to apply the selected animation and close the Custom Animation dialog box.

Answer Key

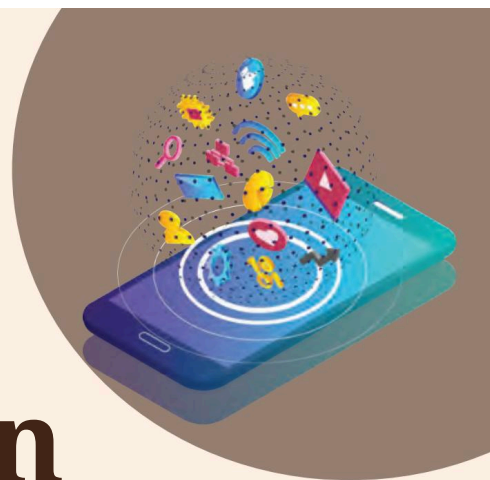

A 1. b 2. d 3. a

B 1. underline 2. font size 3. Bullets and Numbering 4. Font

C 1. False. Bullets and Numbering option is available under Format menu.
2. True.
3. False. Animations once applied can be changed and removed.
4. True.

19

Creating Tables in a Presentation

OpenOffice Impress allows you to create tables for several purposes, especially when you need to organise and present data in a tabular format. A table is an arrangement of data or information, typically in rows and columns. Tables are widely used in data analysis. Let us learn how to insert and use tables in a presentation.

Inserting a Table

To insert a table in your slide:

1. Select the slide where you want to insert a table.
2. Click the **Insert** menu in the menu bar.
3. Select the **Table** option from the drop-down menu.

OR

Click on the **Table**  icon on the **Standard** toolbar.

The **Insert Table** dialog box opens.

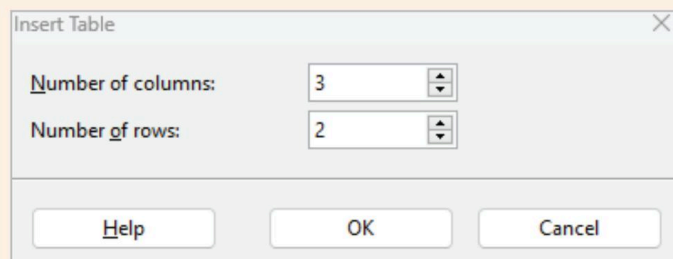

Fig. 19.1: Insert Table Dialog Box

4. In the dialog box, specify the required number of columns and rows.
5. Click on the **OK** button (Fig. 19.1).

The table is inserted in the slide and a **Table** toolbar appears. The **Table** toolbar allows you to change different properties of the table, like, border, border colour, background colour, etc. (Fig. 19.2).

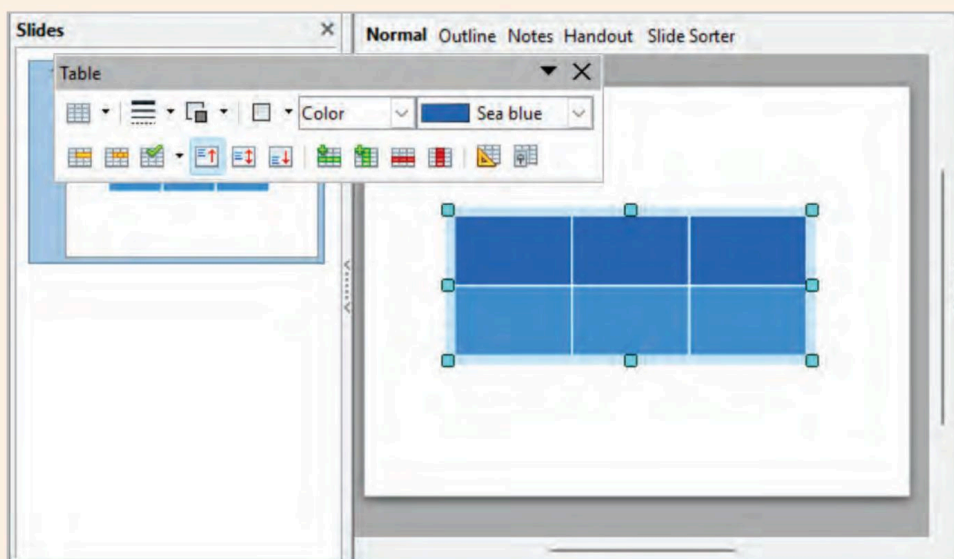

Fig. 19.2: Displaying an Inserted Table

Entering Data in a Table

After inserting a table, follow the given steps to enter data into it:

1. Click in the first cell.
2. Type the desired data.
3. Press the **Tab** key to move to the next cell. You can also use the arrow keys to move left, right, up, and down in the table. By pressing the **Shift + Tab** key, you can move to the previous cell.
4. In the same way, you can insert the data in the entire table.
5. If you reach the last cell of the table, pressing the **Tab** key inserts a new row into the table.

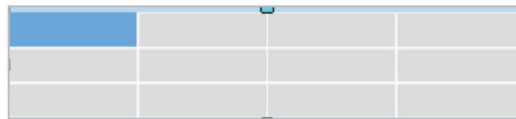

Name	Roll_no	contact_no
amar	12	1236547894
meena	15	7845123698

Fig. 19.3: Entering Data in a Table

Editing Data in a Table

To edit data in a table, you first need to select the text. You can select text in various ways:

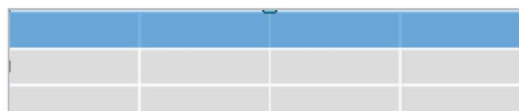

Selecting a cell: To select a cell of a table, place the mouse pointer at the left border of the cell and click, as shown in Fig. 19.4.

A diagram of a 3x3 table. The first cell in the first row is highlighted in blue. A small blue square cursor is positioned at the top center of the first column, indicating the selection point.

Fig. 19.4: Selecting a Cell

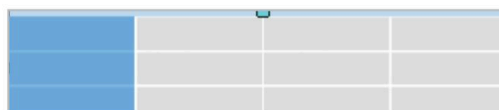

Row Selection: To select a row in a table, place the mouse pointer in the desired row. Click and drag it until you reach the end of the row, as shown in Fig. 19.5.

A diagram of a 3x3 table. The first row is highlighted in blue. A small blue square cursor is positioned at the top center of the first column, indicating the selection point.

Fig. 19.5: Row Selection

Column Selection: To select a column in a table, place the mouse pointer in the desired column. Click and drag until you reach the end of the column, as shown in Fig. 19.6.

A diagram of a 3x3 table. The first column is highlighted in blue. A small blue square cursor is positioned at the top center of the first column, indicating the selection point.

Fig. 19.6: Column Selection

Selecting a Table: To select a complete table, place the mouse pointer in the top left-hand corner of the table and click, as shown in Fig. 19.7.

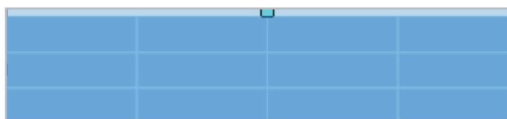

Fig. 19.7: Selecting a Table

Formatting a Table

The process of formatting a table means adjusting the size of the table, its position on the page, merging and splitting cells, and changing its borders and the background. Let us learn about these features one by one.

Inserting Row(s) and Column(s) in a Table

To insert rows and columns in a table:

1. Place the cursor in the row or column where you want to add new rows or columns and right-click.
2. Select the **Row > Insert** or **Column > Insert**. The **Insert Rows** or **Insert Columns** dialog box appears.
3. Specify the number of rows or columns in the dialog box to be inserted. You can also set the position of the new rows or columns to before or after.
4. Click **OK**.

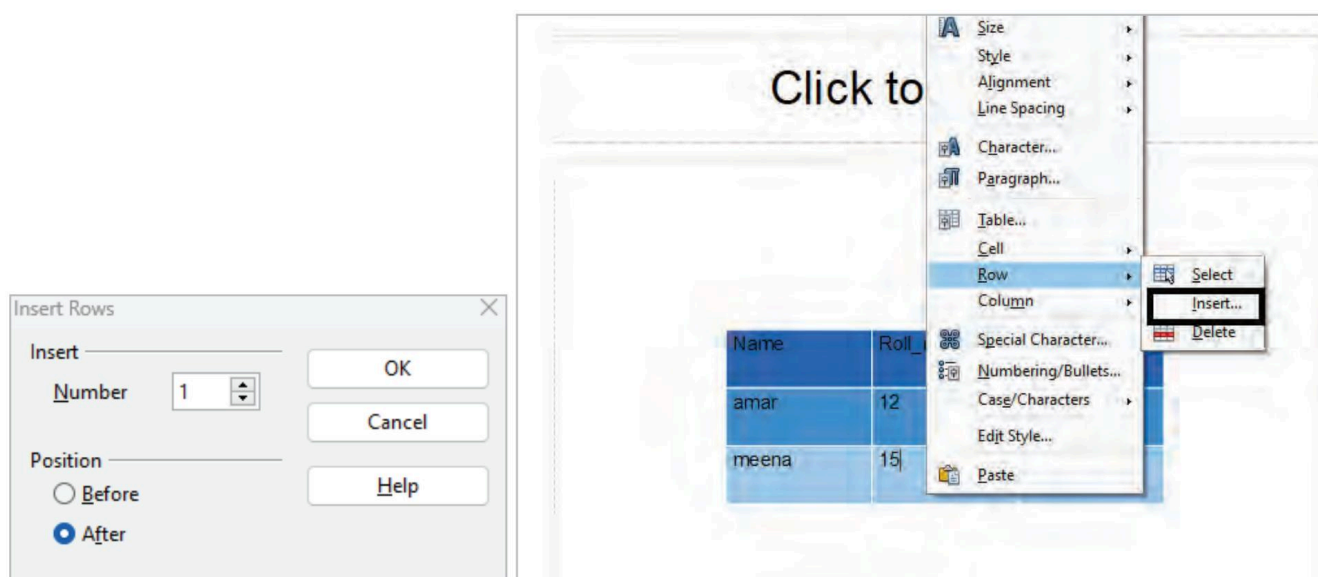

Fig. 19.8: Inserting Row or Column in a Table

The new rows or columns are inserted in the table. You can also use the **Table** toolbar to insert rows and columns.

Merging and Splitting Cells

The merging of cells means to join two or more cells into one cell in a table, and the splitting of cells means to split one cell into two or more cells.

To merge a group of cells:

1. Select the cells to be merged.

2. Right-click on the selected cells.
3. Select the **Cell > Merge** option.

Or click the **Merge Cells** option in the **Table** toolbar.

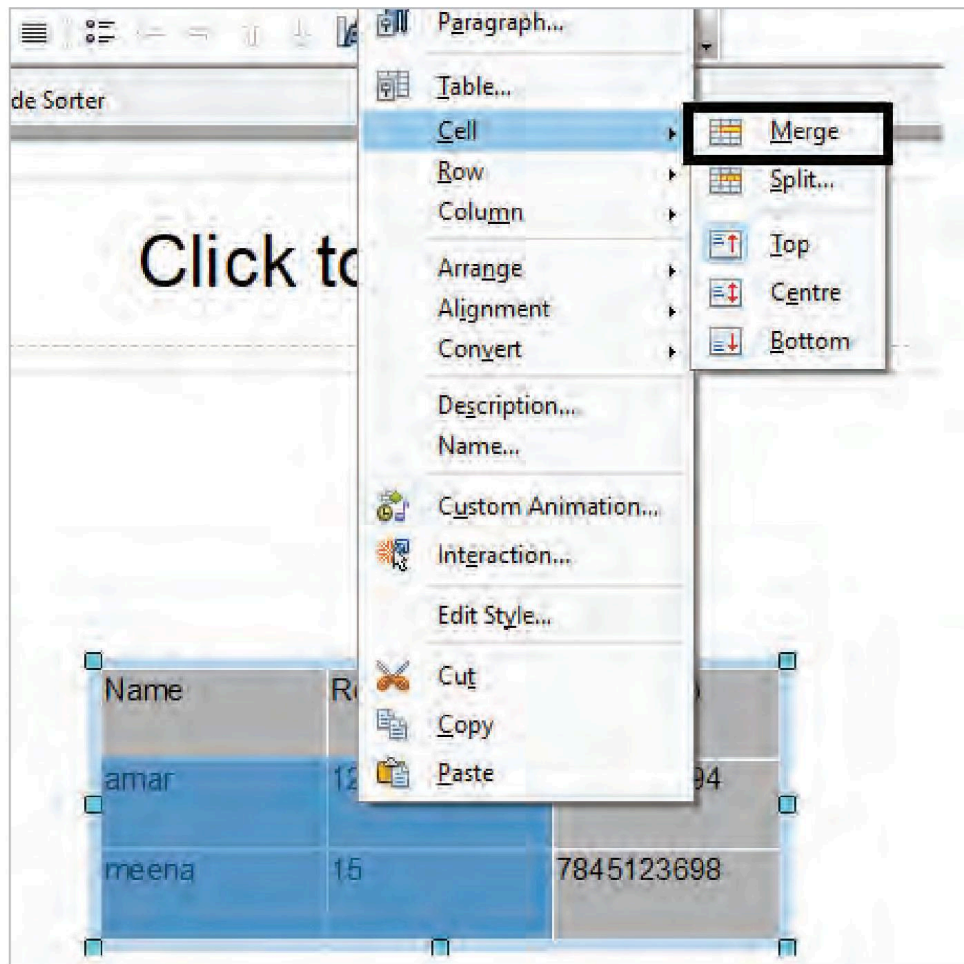

Fig. 19.9: Merging Cells

To split a cell:

1. Place the cursor inside the cell.
2. Right-click on the cell.
3. Select the **Cell > Split** option.

Or

Select the **Split Cells** option in the **Table** toolbar. The **Split Cells** dialog box appears.

4. Specify the number of cells to be made by splitting the cell.
5. Select the direction of the split, Horizontally (more rows), or Vertically (more columns).
6. Click **OK** (Fig. 19.10).

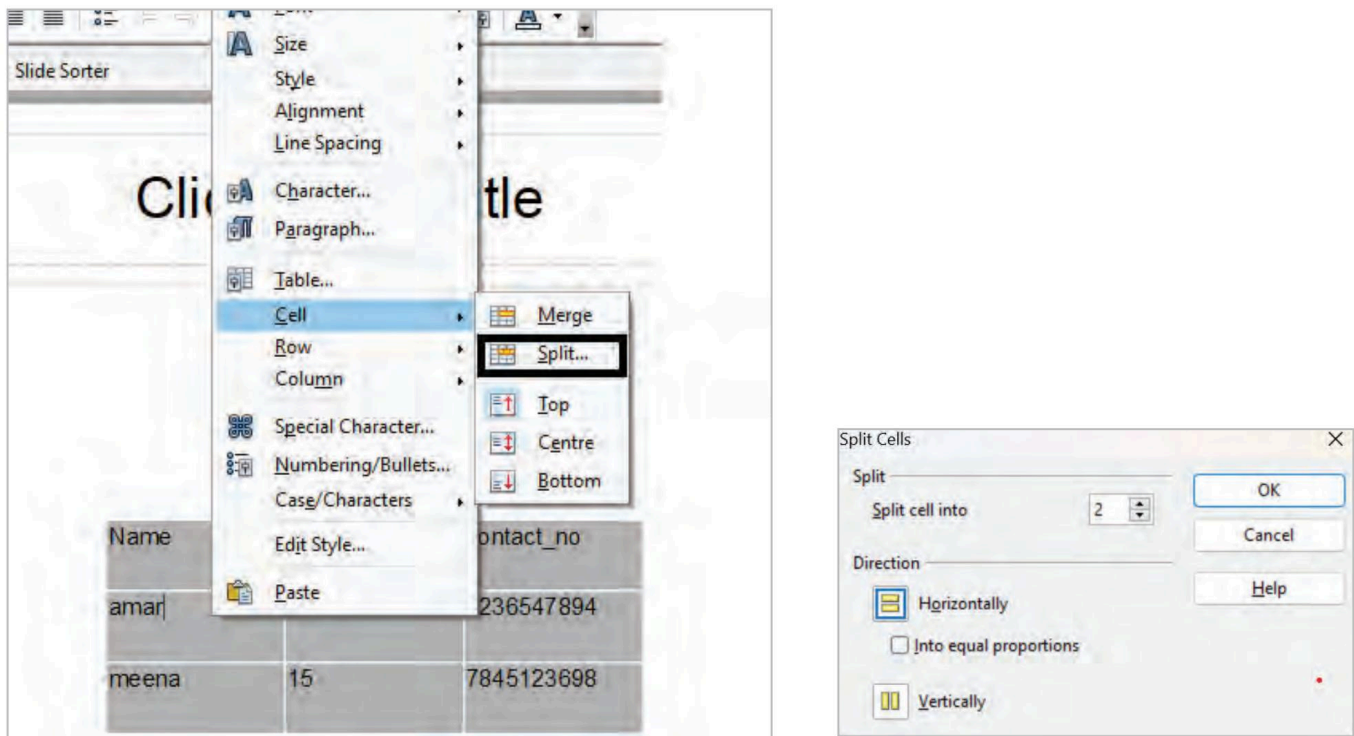

Fig. 19.10: Splitting Cell

Adjusting the Column Width and the Row Height

To adjust the width of the column, follow the given steps:

1. Move the cursor to the border line between two columns.
2. Press the left mouse button and drag to adjust the column width to the desired width.

Similar adjustments can be applied to change the row height.

Table Borders

In OpenOffice Impress, you can customise the borders of tables to enhance the overall look of the table. To change the border of a table, follow these steps:

1. Right-click the selected table.
2. Select the **Table** option from the context menu. The **Format Cells** dialog box opens.
3. Select the **Borders** tab.
4. You can adjust various settings for the table borders, including:
 - **Line Arrangement:** Set the line arrangement (e.g., Outer, Inner, Horizontal, or Vertical).
 - **Line Style:** Choose the style of the line (e.g., Solid, Dashed, or Dotted).
 - **Color:** Pick the colour of the border lines.
5. To apply the changes, click **OK** (Fig. 19.11).

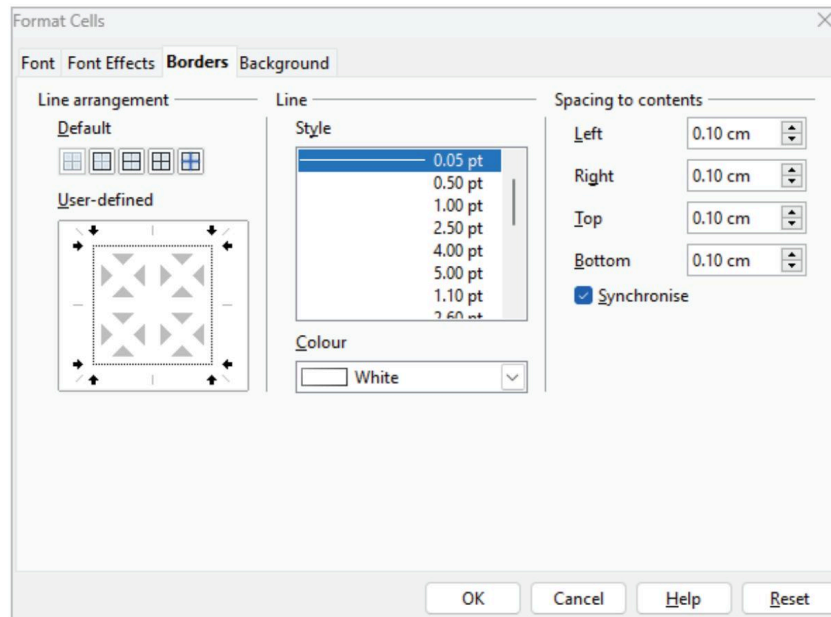

Fig 19.11: Borders Tab

Table Background

You can change the background of a table to highlight a row or enhance your document. You can colour the table cells, rows, or the entire table. To change the background of a table:

1. Right-click the selected table.
2. Select the **Table** option from the context menu. The **Format Cells** dialog box opens.
3. Select the **Background** tab.
4. Select any colour from the **Fill** section to apply the background to the cell, row, or table.
5. Click **OK** (Fig. 19.12).

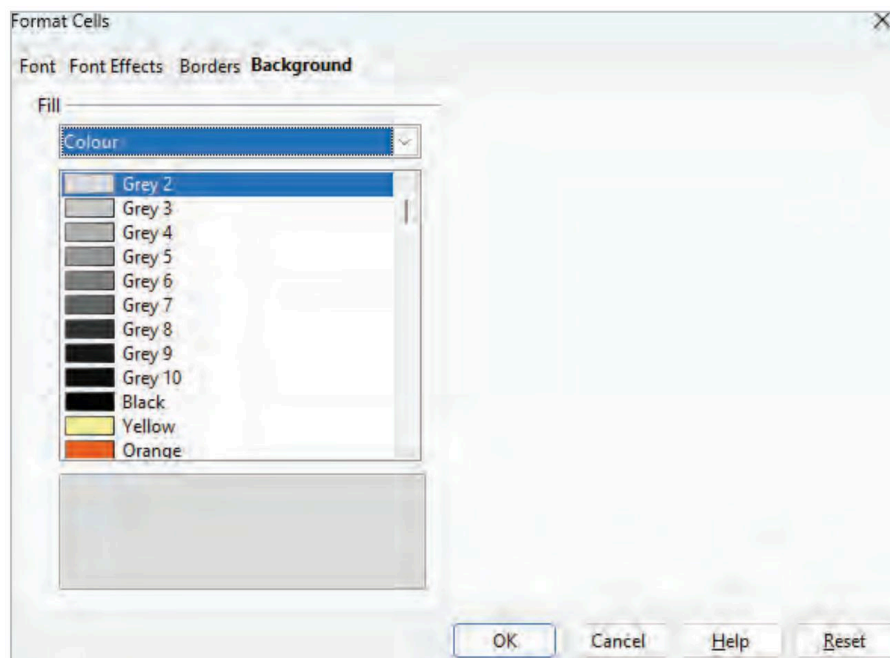

Fig. 19.12: Table Background

Deleting a Row or Column

To delete a row or a column, follow the steps given below:

1. Select the row or column you want to delete.
2. Right-click on the selected row or column.
3. Select **Row > Delete** or **Column > Delete** to delete a row or a column.

The selected row or column will be deleted.

Deleting a Table

To delete a table:

1. Select the table that you want to delete.
2. Press the **Delete** key.

Error Alert!

Merging or splitting cells may disturb the table structure sometimes if we enter wrong number of columns or rows. Perform these operations carefully.

Remember

You can also insert a table by using the Table option present on the slide in the Title, Content layout.

Did You Know?

Prezi is a presentation software application known for its zooming user interface. This software allows presenters to create a canvas and zoom in and out of specific content.

Activity Time

Activity 1: Inserting Table in a Presentation

[Individual Activity]

Suppose you are the head of a children's club in your society. You and your team are planning to organise a programme to celebrate Teacher's Day. Create a table in Impress and list all the activities that are going to be performed within the time slot.

Activity 2: Creating Timetable

[Individual Activity]

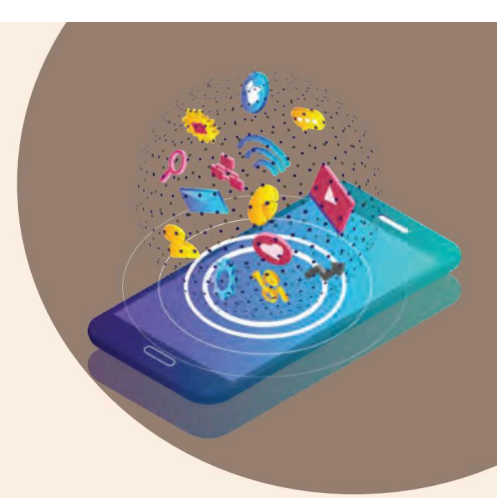

Create your school's time table in an Impress presentation.

Chapter Checkup

A Select the correct option.

1. In OpenOffice Impress, how do you adjust the width of a column in a table?
 - a. Drag the column boundary
 - b. Right-click and select 'Adjust Column Width'
 - c. Press Ctrl + W
 - d. Use the Format menu

20

Working with Images in a Presentation

Images enhance the look and feel of presentations. There are multiple methods to effectively integrate images into your presentation. Let us learn about these methods in detail.

Inserting Image From File

Impress supports various file formats such as GIF, JPEG, PNG, and BMP for importing images. If you have an image stored on your computer, you can easily add it to a slide in Impress. To insert an image from a file:

1. Click on the **Insert** menu from the menu bar.
2. Select the **Picture** option. Alternatively, if your layout includes a picture placeholder, click the **Insert Picture** icon.

This action opens the **Insert Picture** dialog box.

3. Browse and select the folder containing the required image.
4. Choose the image file you want to add.
5. Click the **Open** button (Fig. 20.1).

If the **Link** check box is enabled, Impress creates a link to the file instead of importing the original image. Linking can help reduce the document size. With linked images, the image and the presentation remain separate entities and a duplicate image is not inserted directly in the slide.

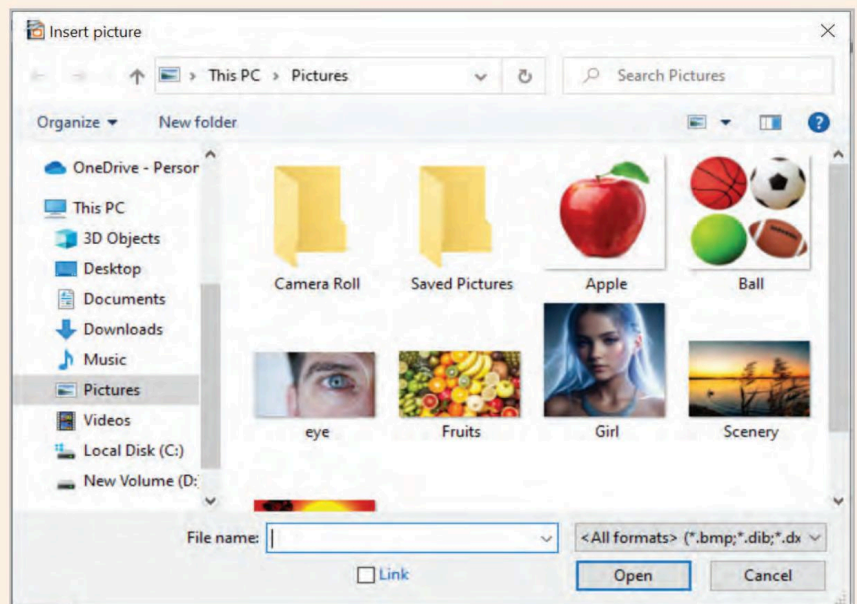

Fig. 20.1: Insert Picture Dialog Box

Inserting Image From OpenOffice Gallery

Gallery is a collection of images suitable for presentations, accessible through OpenOffice Impress. To insert an image from the Gallery:

1. Click on the **Gallery**  icon on the sidebar.
OR
Click on the **Gallery** icon from the **Drawing** toolbar.
OR
Select the **Gallery** option from the **Tools** menu.
2. Select a theme from the **New Theme** section, which contains the images you want to use.
3. Click the image you want and then drag on the slide.

Alternatively, you can right-click the image and then select **Insert > Copy** from the context menu.

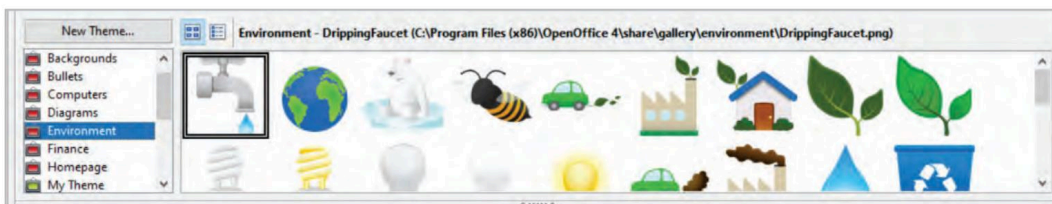

Fig. 20.2: Inserting Image From Gallery

Formatting Images

Formatting an image means moving it to another place, changing its size, and rotating it. Let us discuss all these one by one.

Rotating an Image

To rotate an image:

1. Click on the image you want to rotate.
2. Click the **Rotate**  icon on the **Drawing** toolbar. The resizing handles transform into rotation handles.
3. Position the cursor over any of the corner handles; it will change to a rotation symbol.
4. Click and drag the handle to rotate the object, as needed.

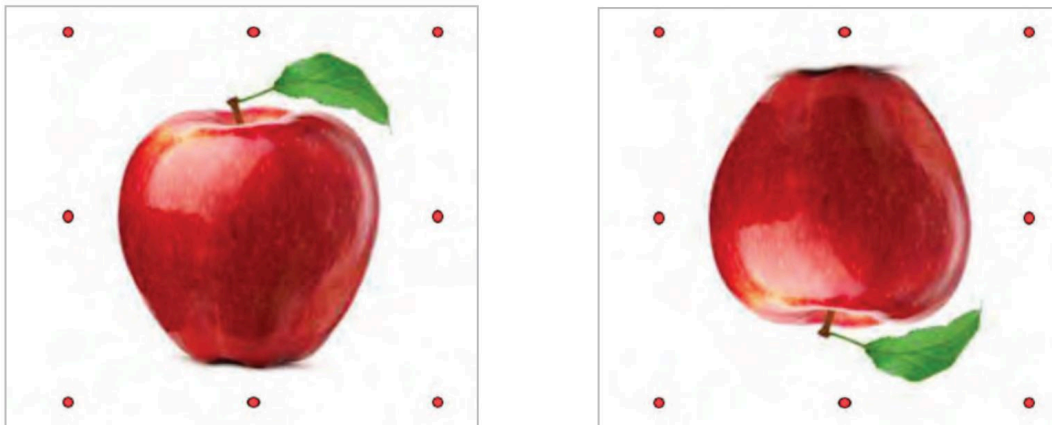

Fig. 20.3: Rotating Images

Alternatively, you can right-click on the picture to access the Flip option, which provides further choices:

1. Select vertically to flip the picture upside down.
2. Select horizontally to flip the picture from left to right.

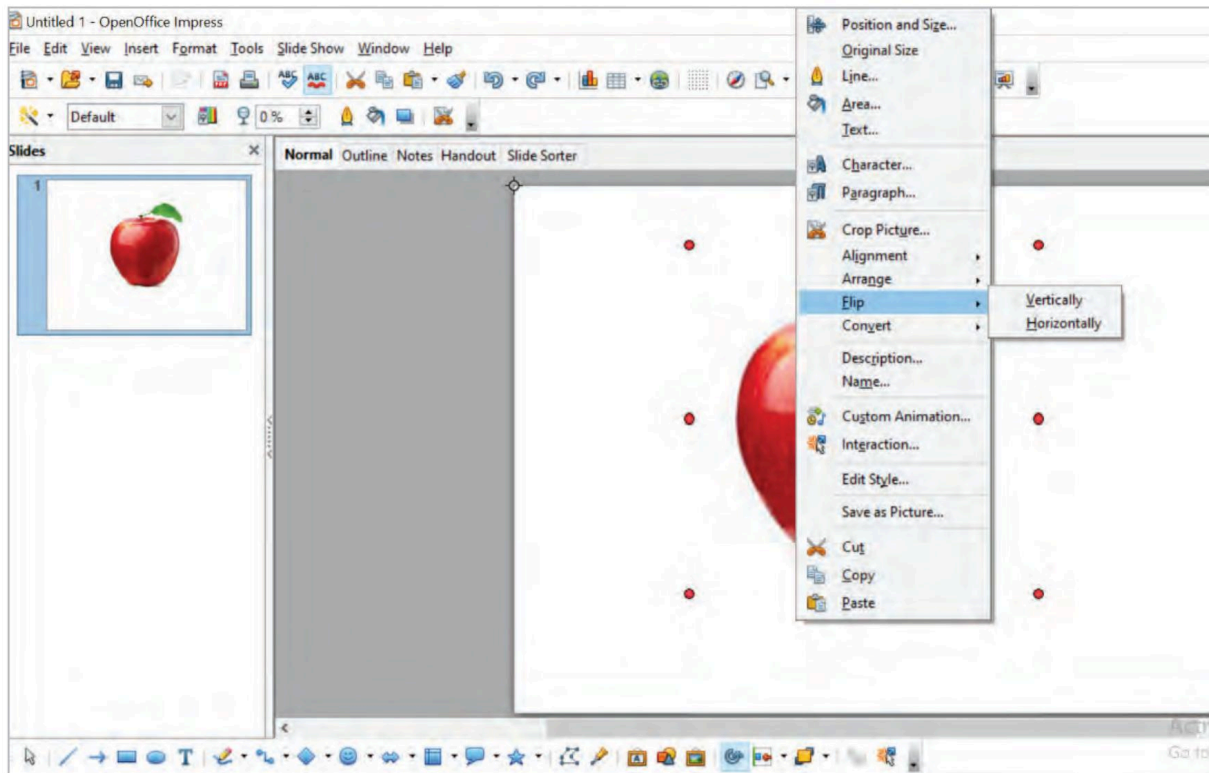

Fig. 20.4: Flipping an Image

Resizing an Image

Resizing involves altering the dimensions of an object by either stretching it to make it large or shrinking it to make it small. To resize an image:

1. Select the object you want to adjust in size.
2. Bring your cursor over any of the eight resizing handles on the selected object.
3. Drag the handle inward to decrease the size of the object or outward to increase it.

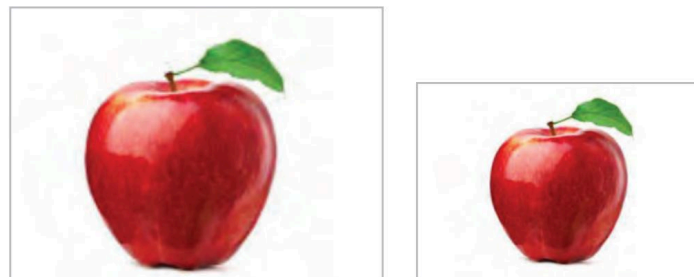

Fig. 20.5: Resizing an Image

If you wish to resize the object uniformly, hold down the **Shift** key while dragging the resizing handle.

Deleting an Image

To remove an image from the slide:

1. Select the image you want to remove. You will notice a border appearing around the image placeholder.
2. Press the **Delete** key. The selected image is deleted.

Formatting Images Using the Picture Toolbar

You can modify the appearance of images in a slide by using the **Picture** toolbar. This toolbar can be accessed by clicking **View > Toolbars > Picture** from the menu bar. The following are the icons present on the **Picture** toolbar:

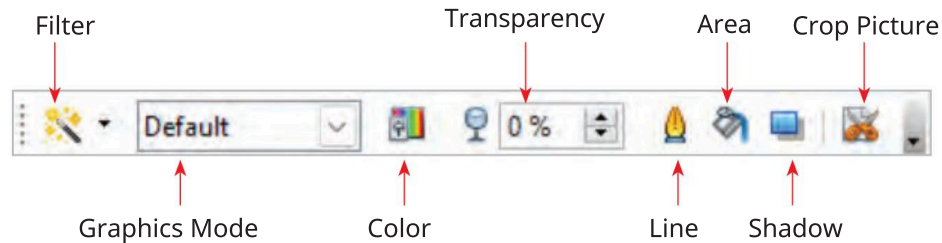

Fig. 20.6: Picture Toolbar

Drawing Graphic Objects

Drawing graphic objects in OpenOffice Impress means adding various visual components to your presentation slides, such as shapes, lines, text boxes, and callouts. These visual elements are used to make your slides look better and effectively communicate information.

Did You Know?

You can add animations to your graphic objects to make them come to life during your presentation.

Inserting Shapes in a Slide

Impress offers a variety of shapes in its **Drawing** toolbar, which you can insert into your slide, as needed. These shapes can be resized, rotated, flipped, and customised with colours.

Fig. 20.7: Drawing Toolbar

To insert a shape:

1. Select the **Basic Shapes** drop-down arrow on the **Drawing** toolbar.
2. Select a symbol from the list, and the cursor becomes a '+' sign.
3. Position it on the slide and then adjust the size by dragging.
4. To add text inside the shape, double-click on the shape. The cursor appears within it.
5. You can then type the desired text.
6. Next, click anywhere else on the slide, and the text will be added inside the shape.

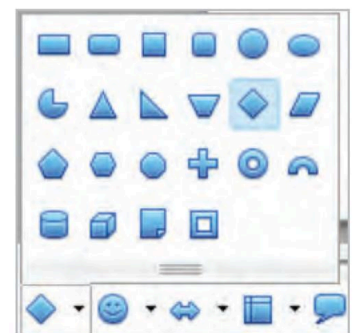

Fig. 20.8: Basic Shapes

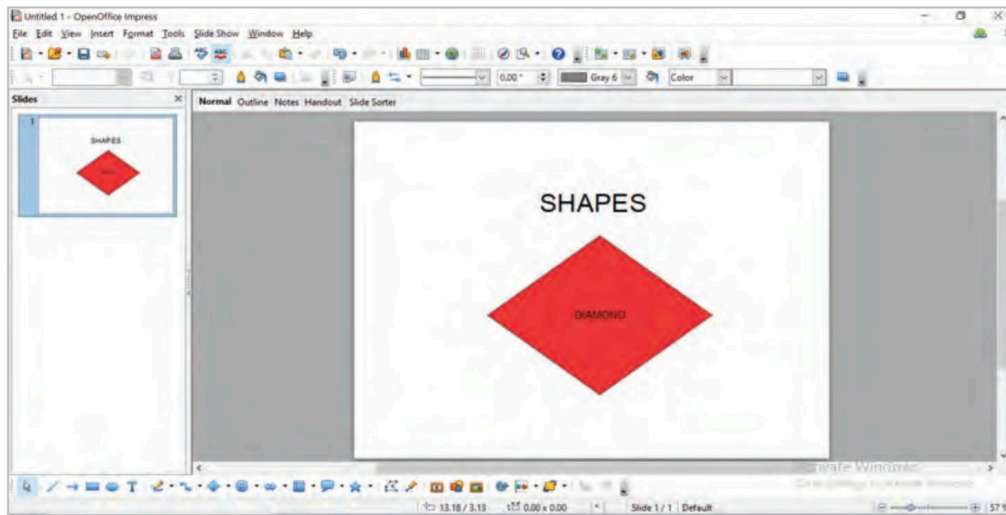

Fig. 20.9: Adding Shapes

Grouping and Ungrouping Shapes or Other Objects

Grouping shapes in OpenOffice Impress allows you to treat multiple shapes as a single entity. This is useful for formatting, moving, rotating, or deleting several shapes simultaneously. When shapes are grouped, they behave as one object, simplifying the management of complex slide designs. Here is how you can group and ungroup shapes:

1. Insert two or more shapes in the slide.
2. Click the **Select** tool on the **Drawing** toolbar.
3. While holding down the **Shift** key, select each shape you want to include in the group.
4. After selecting, you will notice green resizing handles around the shapes.
5. Now, you have a few options to group them:

Click the **Format** menu and select **Group > Group** option.

OR

Right-click the selected shapes and then select the **Group > Group** option from the context menu.

OR

Alternatively, press **Shift + Ctrl + G**.

6. All the selected shapes will be grouped together as a single shape.

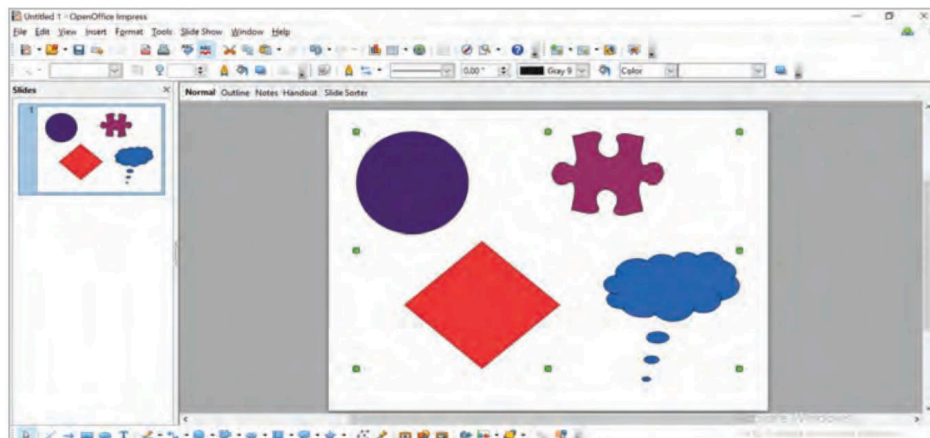

Fig. 20.10: Grouping Shapes

Resizing a Shape

To adjust the size of a shape:

1. Select the shape you want to resize.
2. Position the cursor over one of the eight resizing handles on the selected shape.
3. Drag the handle inward to make the shape smaller or outward to make it larger.
4. If you want to maintain the shape's proportions while resizing, hold down the **Shift** key while dragging the resizing handle.

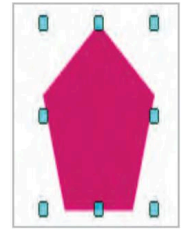

Fig. 20.11: Resizing Shape

Using Shadow Effects

In Impress, you have the option to enhance the visual appeal of shapes by applying shadow effects. Here is how you can do it:

1. Select the shape.
2. Click on the **Format** menu.
3. Select the **Area** option from the drop-down menu. This will open the **Area** dialog box.
4. Click on the **Shadow** tab.
5. Select the **Use shadow** check box in the **Properties** section.
6. Specify the **Distance** between the object and its shadow, as well as the desired **Color** and **Transparency** in their respective input fields.
7. Click on **OK**. Now, the object will display with a shadow effect, enhancing its appearance.

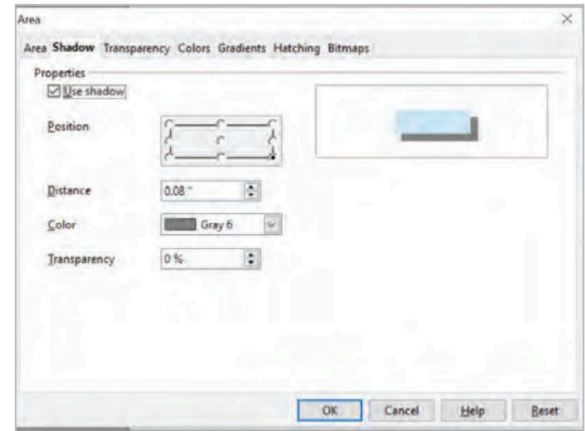

Fig. 20.12: Area Dialog Box

Activity Time

Activity 1: Inserting Images in a Presentation

(Individual Activity)

Create a presentation on your favourite topic. Make your presentation effective by integrating images and shapes; also, format them using the formatting tools available in the Impress.

Activity 2: Formatting Images in a Presentation

(Individual Activity)

Students will be provided with a collection of unformatted images. They need to create a captivating presentation slide using these images, emphasising creative formatting, such as shadows and resizing.

Chapter Checkup

A Select the correct option.

1. What file formats are supported for importing images in OpenOffice Impress?
a PDF and TIFF **b** GIF, JPEG, PNG, and BMP **c** DOCX and SVG **d** MP4 and AVI
2. Which of the following is the correct step for inserting an image from OpenOffice Gallery?
a Use the Insert menu and then choose the Picture option.
b Access the gallery, choose a theme, and then drag the image on the slide.
c Click the Insert Picture icon.
d Right-click the image and then choose Insert > Copy.

- 3 How can you group multiple shapes together in OpenOffice Impress?
- Press Shift+ Ctrl+ G.
 - Select all the shapes, right-click and then select Group > Group option.
 - Use the Select tool and select the shapes, then select the Format > Group > Group option from the menu bar.
 - All of these.

B Fill in the blanks with the most suitable words.

- To insert an image from a file in OpenOffice Impress, navigate to the Insert menu and then select the _____ option.
- To delete an image, select the image and then press the _____ key.
- The _____ in OpenOffice Impress is a collection of images suitable for presentations.
- To ungroup a set of shapes or objects in Impress, right-click and then select the _____ option.

C State whether the following is True or False. Correct the statements that are false.

- When inserting an image from a file in OpenOffice Impress, enabling the Link check box results in the original image being embedded in the slide.
- The Gallery in OpenOffice Impress can be accessed from the Insert menu.
- Resizing involves altering the dimensions of an object by either stretching it larger or shrinking it smaller.
- Formatting an image means, changing its size and rotating it.

D Answer the following questions. (Solved)

Q1. What is the role of images in a presentation?

A1. Images enhance the look and feel of the presentations.

Q2. What is the purpose of grouping shapes in OpenOffice Impress?

A2. Grouping shapes in OpenOffice Impress allows you to treat multiple shapes as a single entity. This is useful for formatting, moving, rotating, or deleting several shapes simultaneously. When shapes are grouped, they behave as one object, simplifying the management of complex slide designs.

Q3. Rohit is working on a presentation in which he wants to add the shadow effect to the images. Help him by writing the steps to do so.

A3. Here is how you can add the shadow effect:

- Select the shape.
- Click on the Format menu.
- Select the Area option from the drop-down menu. the Area dialog box is opened.
- Click on the Shadow tab.
- Select the Use shadow check box in the Properties section.
- Specify the Distance between the object and its shadow, as well as the desired Color and Transparency in their respective input fields.
- Click the OK button.

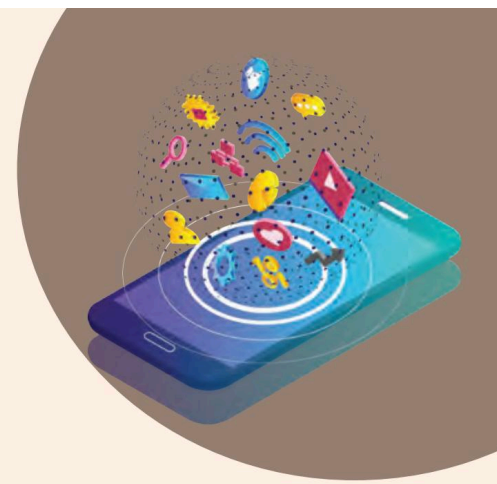

Answer Key

A 1. b 2. b 3. d

B 1. Picture 2. Delete 3. Gallery 4. Ungroup

- C**
- False. Enabling the 'Link' check box when inserting an image from a file creates a link to the file rather than embedding the original image.
 - False. The Gallery in OpenOffice Impress is accessed using the Gallery icon on the sidebar or the Drawing toolbar, but not from the Insert menu.
 - True.
 - True.

Working with Slide Master

In Impress, you can modify the overall look and formatting of all the slides in your presentation using the Slide Master. Themes, layouts, backgrounds, colours, fonts, and other elements can be kept consistent by using the Slide Master. Every presentation contains a Slide Master, also known as the master page, which acts as a model for each of the individual slides in your presentation. You can save time and ensure a consistent appearance throughout your presentation by making adjustments to the slide master.

Creating Slide Master

To create a new Slide Master:

1. Select the **Format** menu > **Slide Design** option.

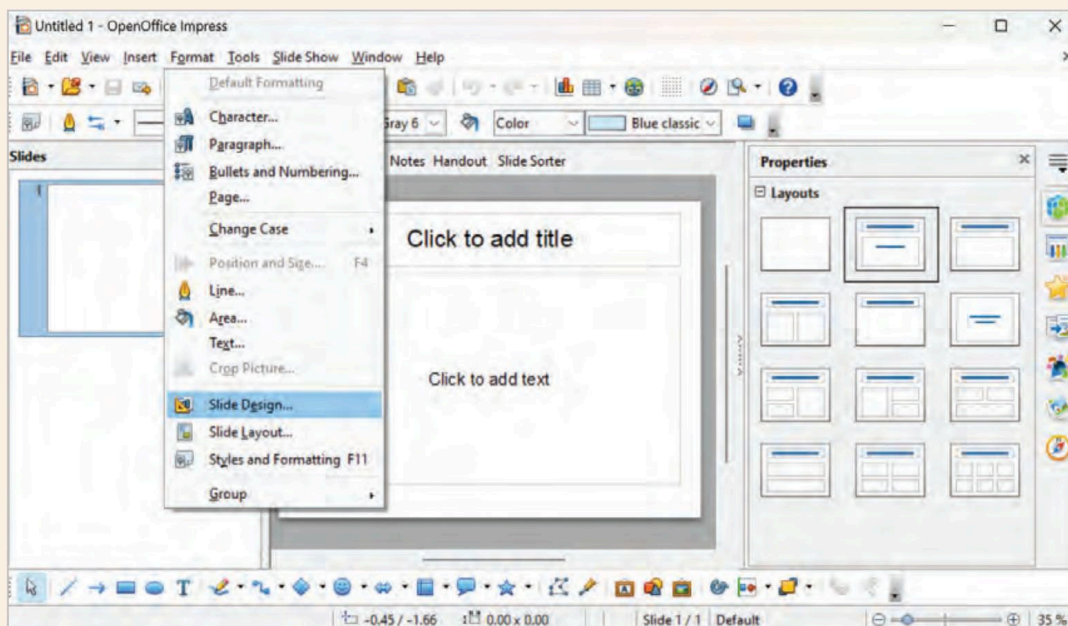

Fig. 21.1: Slide Design Dialog Box

The **Slide Design** dialog box opens.

2. Click the **Load** button.

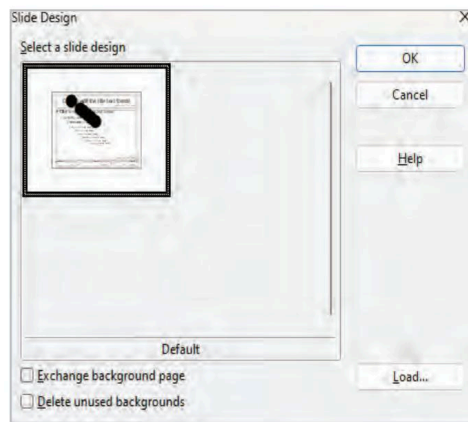

Fig. 21.2: Slide Design Dialog Box

The **Load Slide Design** dialog box appears.

3. Under the **Categories** section, select the **Presentation Backgrounds** option.
4. In the **Templates** section, select a template that has the design you wish to use.
5. To preview the template, click the **More** button and then select the **Preview** check box.
6. Click **OK** to apply the selected template.

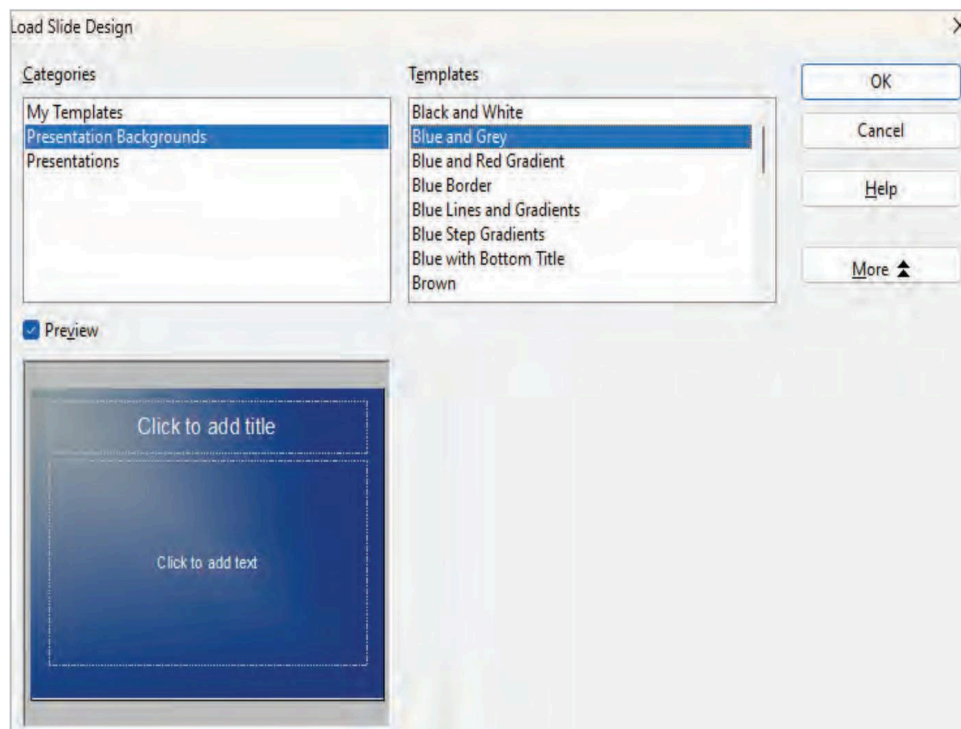

Fig. 21.3: Load Slide Design Dialog Box

This process of creating a Slide Master resembles the procedure for modifying the default Slide Master.

To apply the slide design to all slides in your presentation:

1. Ensure that the **Exchange background page** check box is checked in the **Slide Design** dialog box.
2. Click on **OK**.

To apply the slide design to the current slide only:

1. Clear the **Exchange background page** check box in the **Slide Design** dialog box.
2. Click on **OK**.

Error Alert!

The presentation contains multiple Slide Masters that may cause formatting inconsistencies. Review and consolidate Slide Masters to ensure a consistent design.

Applying Themes

Themes are predesigned collections of formatting elements that include backgrounds, text styles, layouts, colour schemes, and more. Any presentation that uses them will look better overall. To apply a theme:

1. Click the **Master Pages**  icon on the sidebar. The **Master Pages** pane opens.
2. Within the **Available for Use** section, Impress displays a list of themes that can be used for your slides.
3. By selecting any theme, you can instantly change the appearance of your slides.

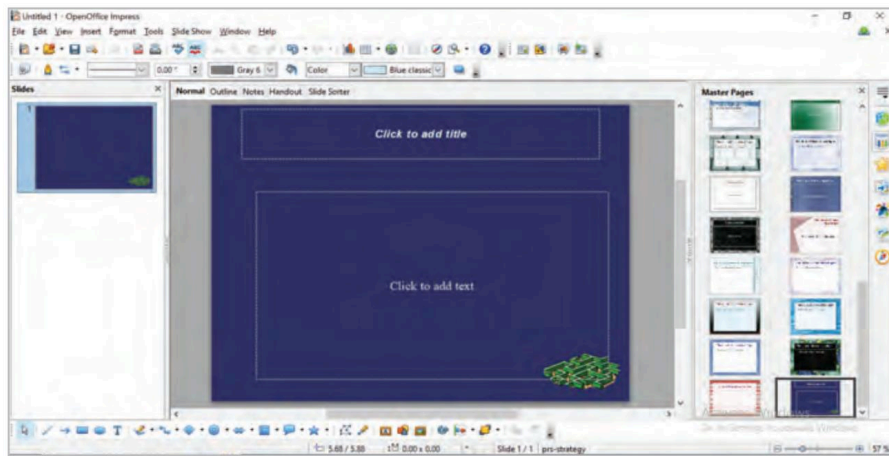

Fig. 21.4: Applying Theme

Additionally, you can apply the chosen theme to specific slides by following these steps:

1. Choose the desired theme.
2. Right-click the theme and then click on the **Apply to All Slides**, to apply the selected theme to all the slides.
3. Select the **Apply to Selected Slides** option to apply the theme exclusively to the selected slides.

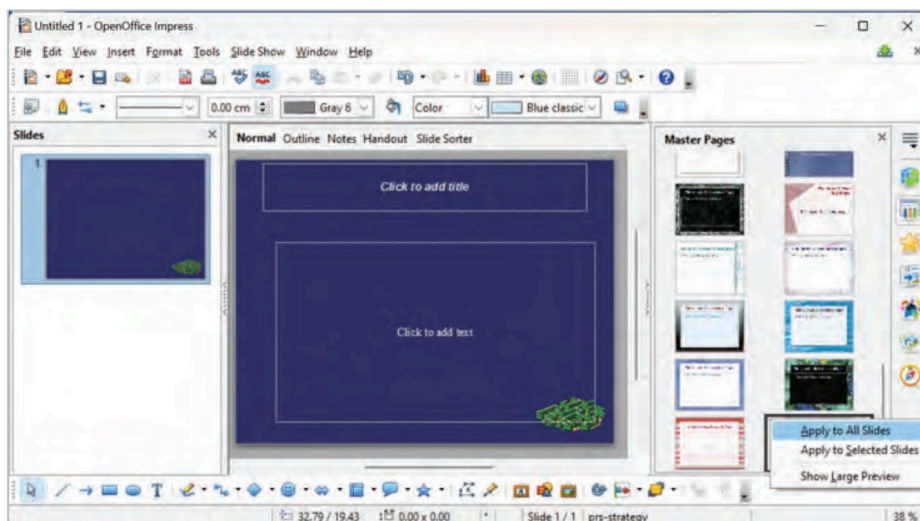

Fig. 21.5: Applying Theme to the Slides

For a more extensive preview of the theme, you can also save the background image by following these instructions:

1. Select the theme you wish to use.
2. Right-click on the slide.
3. Select **Slide > Set Background Picture for Slide** from the context menu.

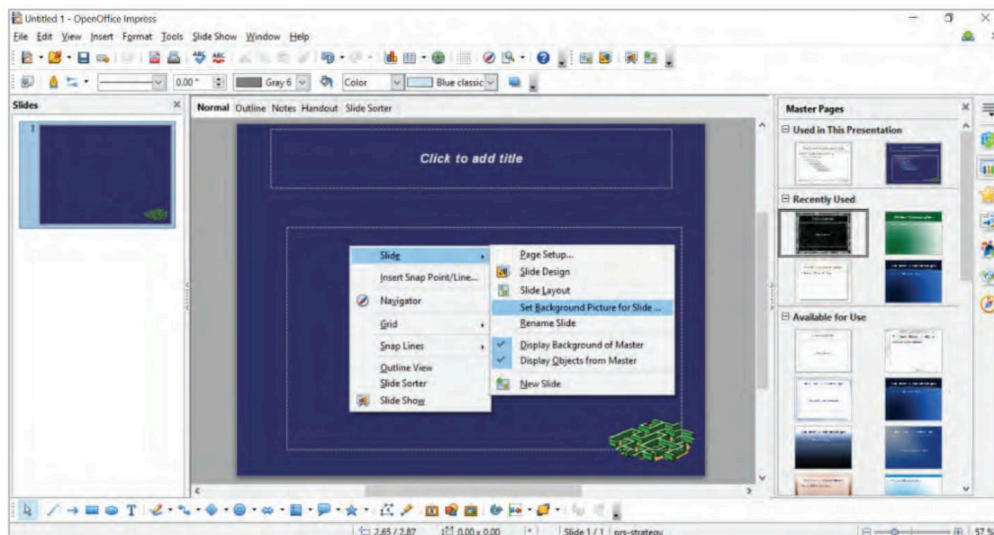

Fig. 21.6: Saving Background

4. Select the image file in the **Set Background Picture for Slide** dialog box.
5. Click on **Open** button.

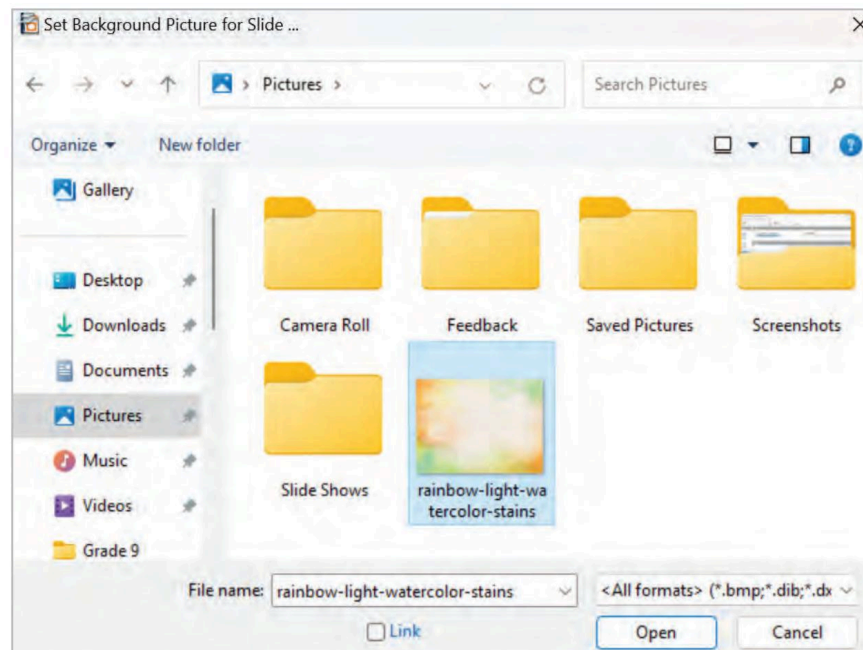

Fig. 21.7: Set Background Picture for Slide Dialog Box

Did You Know?

You can easily customise the background of all your slides using Slide Master. You can make uniform changes to the background, such as adding a company logo and changing the colour scheme.

Adding Transitions

Transition effects are special visual enhancements used to engage and captivate the audience during a presentation. They add a professional touch and make the slides more appealing.

Applying Transition Effects to a Slide

A slide transition effect refers to the visual animation that occurs when transitioning from one slide to another during a presentation. These transitions, such as rolling down from the top or flying in from the left, apply a dynamic appeal to your slide show.

To apply these transition effects:

1. Select the slide you want to apply the transition effect to.
2. Click on the **Slide Show > Slide Transition** option from the menu bar.

OR

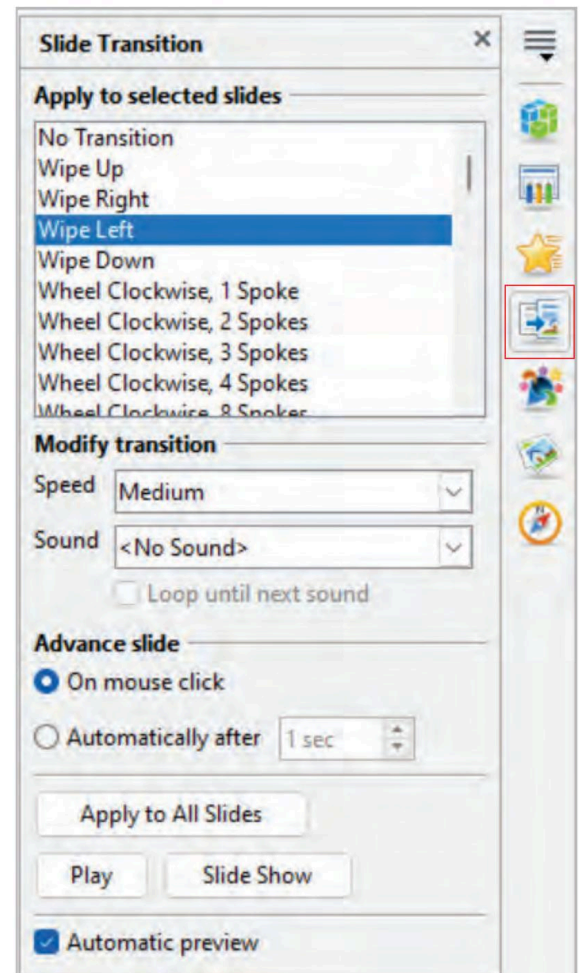

Click the **Slide Transition** icon on the sidebar.

The **Slide Transition** pane appears.

3. Select a transition effect from the options provided under the **Slide Transition** section. This will give you a preview of how the selected effect will look on the current slide.
4. You can adjust the speed of the transition by choosing from **Slow**, **Medium**, or **Fast** in the **Speed** box under the **Modify transition** section.
5. If you want to include a sound effect, select it from the **Sound** box drop-down list.
6. If you wish to repeat the sound until the next sound starts, activate the **Loop until next sound** check box.

To control when the next slide appears, you have two options:

1. If you want to manually advance to the next slide, choose **On mouse click** in the **Advance slide** section.
2. For automatic advancement, select **Automatically after** and specify the duration for which a slide should remain visible.
3. To apply these settings to all slides, click the **Apply to All Slides** button.
4. If you have checked the **Automatic preview** check box, you will instantly see how the selected transition effect looks in the work area. You can replay the effect anytime by pressing the **Play** button.
5. To begin the slide show from the current slide, click on the **Slide Show** button.

Activity Time

Activity 1: Adding a Slide Master

(Individual Activity)

Create a presentation on the topic **Save Energy**. Add a slide master to apply consistent formatting to all slides of your presentation.

Activity 2: Applying Transition Effects

(Individual Activity)

Create a presentation on the topic **National Festivals of India**. Add images to make your presentation more attractive. Also, apply the transition effect to add a professional touch to the presentation.

Chapter Checkup

A Select the correct option.

- 1 What is the purpose of the Slide Master in Impress?
 - a To create individual slide designs
 - b To apply themes to slides
 - c To modify the overall look and formatting of all slides
 - d To add transition effects to slides
- 2 How can you create a new Slide Master in Impress?
 - a Click the Apply to All Slides button.
 - b Click the Format menu and then select Slide Design.
 - c Right-click a slide and then select Set Background Picture.
 - d Use the Slide Transition icon on the sidebar.
- 3 To apply a theme to all slides in your presentation, which option should you select in the Slide Design dialog box?
 - a Exchange the background page.
 - b Apply to Current Slide.
 - c Preview theme.
 - d Set Background Picture for Slide.

B Fill in the blanks with the most suitable words.

- 1 To create a new slide master in Impress, you should click the Format menu and select the _____ option.
- 2 To adjust the speed of a transition effect in Impress, you can choose from options like Slow, Medium, or Fast in the _____ box under the Modify transition section.
- 3 You can control when the next slide appears in Impress by selecting either On mouse click or Automatically after options in the Advance slide section of the Slide _____ pane.
- 4 To make the next slide come automatically, select the _____ option and specify the duration for which a particular slide should remain visible.

C State whether the following is True or False. Correct the statements that are false.

- 1 The slide master in Impress allows you to modify the appearance of individual slides only in your presentation.
- 2 To create a new slide master in Impress, you can access it directly from the Slide Transition icon on the sidebar.
- 3 Themes in Impress include elements such as backgrounds, text styles, layouts, and colour schemes to enhance the overall look of a presentation.
- 4 Transition effects in Impress are used to add dynamic appeal and engage the audience during a presentation.

D Answer the following questions. (Solved)

Q1. What is the primary purpose of the Slide Master in Impress?

A1. In Impress, you can modify the overall look and formatting of all the slides in your presentation with the slide master function.

Q2. Why are transition effects important in a presentation?

A2. A slide transition effect refers to the visual animation that occurs when transitioning from one slide to another during a presentation. These transitions, such as rolling down from the top or flying in from the left, apply a dynamic appeal into your slide show.

Q3. Nikita is creating a presentation in which she wants to use predesigned formatting elements like backgrounds, text styles, layouts, and colour schemes. Which feature of Impress will help her do this task quickly? Also, write the steps for her.

A3. She can use the themes feature of Impress for this purpose.

Steps to do so:

- Click on the Master Pages button on the sidebar.
- Within the Available for Use section, Impress displays a list of themes that can be used for your slides.
- By selecting any theme, you can instantly change the appearance of your slides.

Answer Key

A 1. c 2. b 3. a

B 1. Slide Design 2. Speed 3. Transition 4. Automatically after

C 1. False. The Slide Master in Impress is used to modify the overall look and formatting of all slides in your presentation, not individual slides.
2. False. To create a new slide master in Impress, you need to go to the Format menu and choose the Slide Design option. The Slide Transition icon in the Sidebar is used for applying transition effects, not for creating slide masters.
3. True.
4. True.

Unit Reflection

Key Terms

Digital Presentation: It is a method by which you can present your work to the audience without using paper or a pen.

Slide: An electronic page in a presentation.

Template: A template is a group of slides that contains predefined layouts, colours, fonts, and themes.

Slide Layout: It is the arrangement of objects on a slide.

Formatting: It refers to changing and arranging text in a presentation to make it attractive.

Custom Animation: It means that you can make animation effects that are unique and specific to each object or part in a slide.

Table: It is an arrangement of data or information, typically in rows and columns.

Grouping: It is the process of combining multiple drawing objects to make a single entity.

Slide Master: It acts as the model for each of the individual slides in your presentation.

Things to Remember

- The basic meaning of presentation is “the way in which something is shown, explained, and offered to people”.
- When multiple slides are presented in a sequential manner, it is known as a slide show.
- There are various digital presentation software programs available that can help you create and deliver attractive presentations.
- A presentation is considered good if it effectively conveys its message to the audience, engages them, and leaves a positive and lasting impression.
- The Presentation Wizard provides three ways to create a presentation: Empty presentation, From template, and Open existing presentation.
- A placeholder is an area in the slide that contains different types of content, including text and images.
- A slide layout contains placeholders that hold content, such as text, images, charts, sounds, movies, tables, etc.
- While creating a presentation, it is very important to save it with a name so that the data may not be lost.
- A slide show is a sequence of slides for viewing presentations.
- The Help menu consists of a list of options through which you can get help on different topics.
- Inserting a duplicate slide means creating an identical replica of an existing slide within your presentation.
- Moving a slide means to remove it from its original position and place it in another position.
- Copying a slide means making a duplicate of the slide.
- Deleting slides means to permanently remove them from the presentation.

- Renaming a slide means changing the name of the slide.
- The zoom level determines how much of the presentation is visible on the screen.
- The normal view is the default view and provides a workspace where you can create and edit slides.
- The Slide Sorter view displays thumbnails of all slides in your presentation.
- Handout view allows you to create handouts for your audience.
- Notes view allows you to add and view speaker notes associated with each slide.
- You can format the contents on a slide by using the icons on the Text Formatting toolbar.
- Animation effects can make your presentation more dynamic.
- The Start option in the Custom Animation pane allows you to set the order in which animations occur.
- Tables are widely used in data analysis.
- The process of formatting a table means adjusting the size of the table, its position on the page, merging and splitting cells, and changing its borders and background.
- The merging of cells means to join two or more cells into one cell in a table, and the splitting of cells means to split one cell into two or more cells.
- Images enhance the look and feel of the presentations.
- The Gallery is a collection of images suitable for presentations, accessible in all OpenOffice Impress.
- Resizing an image involves altering the dimensions of an object by either stretching it larger or shrinking it smaller.
- Drawing graphic objects in OpenOffice Impress means adding different visual components to your presentation slides, such as shapes, lines, text boxes, and photos.
- In Impress, you can modify the overall look and formatting of all the slides in your presentation with the slide master function.
- Themes are pre-designed collections of formatting elements that include backgrounds, text styles, layouts, colour schemes, and more.
- A slide transition effect refers to the visual animation that occurs when transitioning from one slide to another during a presentation.

Test Your Knowledge

A. Select the correct option.

- When multiple slides are presented in a sequential manner in a digital presentation, it is known as a
a. Document ☐ b. Essay ☐ c. Presentation ☐ d. Slide show ☐
- Which shortcut keys should we use to save a presentation?
a. Ctrl+W ☐ b. Ctrl+O ☐ c. Ctrl+N ☐ d. Ctrl+S ☐
- Which of the following keys is used to stop a slideshow at any time?
a. Esc key ☐ b. End key ☐ c. Break key ☐ d. Space bar ☐
- Which of the following is the default view and provides a workspace where you can create and edit slides?
a. Notes view ☐ b. Normal view ☐ c. Handout view ☐ d. Slide Sorter view ☐
- Which of the following is not a text alignment in Impress?
a. Align left ☐ b. Align right ☐ c. Justified ☐ d. Middle ☐

B. Fill in the blanks with the most suitable words.

- A refers to the use of digital tools and technologies to create, organise, and deliver visual content.
- The and options are used to move a slide.
- The option runs the next animation at the same time as the previous one.
- refers to the size of the text.
- The toolbar allows us to draw various shapes in a presentation.

C. State whether the following is *True* or *False*. Correct the statements that are false.

- The presentation should deliver its main message to the audience.
- You can easily copy and move slides within a presentation.
- There are 7 types of views available in Impress.
- Tables are widely used in data analysis.
- Shift+G is the shortcut key to group objects on a slide.

D. Short answer-type questions.

- What is the benefit of duplicating a slide in a presentation?
- Write shortcut keys for bold, italic, and underline.
- How does a slide master save time?

E. Long answer-type questions.

- Write three methods of running a slide show.
- Write the steps for deleting a row or column in a table.
- What is the difference between a custom animation and a slide transition?

F. Competency-based questions.

1. Anita is creating a presentation in which she wants to add notes for herself. Is it possible to do it in Impress? If yes, which view will help her do this?
2. Arnav is entering some data in a table on a slide in Impress. While entering the data, he realises that data in one of the columns is shifted to the next row. He wants to increase the width of the column to fit the data in it. Help him by writing down the steps to do so.
