

**NCERT QUESTIONS WITH SOLUTIONS**

1. Choose the right answer from the four alternatives given below:

(i) A landmass bounded by sea on three sides is referred to as

- (1) Coast
- (2) Island
- (3) Peninsula
- (4) None of the above

Ans. (3) Peninsula

(ii) Mountain ranges in the eastern part of India forming its boundaries with Myanmar are collectively called:

- (1) Himachal
- (2) Uttaranchal
- (3) Purvanchal
- (4) None of the above

Ans. (3) Purvanchal

(iii) The western coastal strip south of Goa is referred to as

- (1) Coromandel
- (2) Konkan
- (3) Kannad
- (4) Northern Circar

Ans. (2) Konkan

(iv) The highest peak in the Eastern Ghats is

- (1) Anai Mudi
- (2) Kanchenjunga
- (3) Mahendragiri
- (4) Khasi

Ans. (3) Mahendragiri

2. Answer the following questions briefly

(i) What is the 'bhabar'?

Ans. Bhabar is a pebble studded formation situated at the junction of mountain and plain.

(ii) Name the three major divisions of the Himalayas from north to south.

Ans. The Great or the Inner Himalayas or the Himadri, the Middle Himalayas or the Himachal, and the Outer Himalayas or the Shivaliks.

(iii) Which plateau lies between the Aravali and the Vindhya ranges?

Ans. The Malwa plateau lies between the Aravali and the Vindhya Ranges.

(iv) Name the island group of India having coral origin.

Ans. Lakshadweep Islands is the island group of India having coral origin.

3. **Distinguish between**

(i) Bangar and Khadar.

Ans. Banger

- (a) Formed of older alluvium
- (b) Lies above flood plains of rivers.
- (c) Presents a terrace like feature.
- (d) Less fertile

Khadar

- (a) Renewed every year.
- (b) Is newer, younger deposit of flood
- (c) Contains calcareous deposits locally known as Kankar.
- (d) More fertile

(ii) Western Ghats and the Eastern Ghats.

Ans. Western Ghats

- (a) They stand like a continuous wall and can be crossed through passes only. Thal Ghat provides passage to rails and roads.
- (b) This range is a source of many large rivers.

- (c) It obstructs the monsoon winds coming from the Arabian Sea which causes heavy rainfall in the Western Coastal Plain.

Eastern Ghats

- (a) They are discontinuous and irregular. They have been dissected by rivers which have made their passages to reach the Bay of Bengal.
- (b) No big river originates from this range.
- (c) They are almost parallel to monsoons originating in the Bay of Bengal and do not cause much rainfall.

4. Which are the major physiographic divisions of India? Contrast the relief of the Himalayan region with that of the Peninsular Plateau.

Ans. The major physiographic divisions of India are :

- (i) The Great Mountains of the North.
- (ii) The North Indian Plain.
- (iii) The Peninsular Plateau
- (iv) The Coastal Plains
- (v) The Islands.

Himalayan Region

- (a) This region comprises greatest and highest mountain ranges of the world.
- (b) The ranges have I-shaped and U-shaped valleys.
- (c) It is the origin of perennial rivers.
- (d) Young fold mountains made from the uplift of the strata formed by the sedimentary rocks.

- (e) Parallelly arranged mountain ranges are Parallelly arranged mountain ranges are Parallelly arranged mountain ranges are Parallelly arranged mountain ranges are

Peninsular Plateau

- (a) Rugged and dissected terrain plateau is a remnant portion of the supercontinent the Gondwanaland.
- (b) It has horsts, rift valleys and troughs.
- (c) It has rainfed, seasonal rivers.
- (d) Created from igneous and metamorphic rocks after splitting of Gondwanaland.
- (e) Rivers dissect. Faults and vertical movement of the Earth mark the plateau.

5. Give an account of the Northern Plains of India.

Ans. The Northern Plains have been formed from the alluvium that the mountain rivers deposited here. This turned the soil on the surfaced land fertile for growing a rich harvest of variety of crops. This led to the development of the Indus River Valley Civilisation. The rich soil was further aided by favourable climate and constant water supply from the rivers. Between the mouths of the Indus and the Ganga-Brahmaputra, the North Indian Plain covers a distance of 3200 km. It is 300 to 150 km wide at some places. The North Indian Plains have the Indus river system in the west and the Ganga-Brahmaputra river system in the east.

The first includes Jhelum, Chenab, Ravi, Beas, Satluj. The Indus flows into the Arabian Sea. The second includes Ganga, its tributaries and the Brahmaputra which combine as Meghna as they drain into the Bay of Bengal. They form the world's largest and fastest growing delta. The difference in relief has led the North Indian Plains to be divided into four zones:

- (i) Bhabhar
- (ii) Tarai
- (iii) Bangar
- (iv) Khadar

6. Write short notes on the following.

(i) The Indian Desert

Ans. Lying towards the western margins of the Aravali Hills, the Indian desert is formed of sandy plain covered with sand dunes. Receiving less than 10 mm rainfall in a year, the region has arid climate, low vegetation and streams that appear only in the rainy season. But they soon disappear into the sands, lacking enough water to reach the sea. Large areas of the deserts have crescent shaped sand dunes, i.e. barchans, while longitudinal dunes are abundant near Indo- Pakistan boundary.

(ii) Central Highlands.

Ans. The northern part of the Peninsular Plateau consists of plateaus, denuded mountain ranges and low hills made of igneous rocks. In the north-west are the Aravali range, running in south-west, north-east direction forming a

discontinuous ridge. Thar Desert lies to the west of Aravali ranges. The southern boundary is demarcated by the Vindhya Range with Kaimur Hills in the eastern extent. The Malwa plateau lies between Aravalis and Vindhyas. Between the valleys of Narmada and the Son, escarpments are formed by the Vindhyan Kaimur range. Malwa plateau and Chota Nagpur Plateau together are called Central Highlands.

(iii) Island groups of India.

Ans. The Lakshadweep consists of many small islands located opposite the Kerala coast in the Arabian Sea. The islands of this group are formed of coral deposits called 'atolls' in Malayalam which refer to their ring or 'horse-shoe' shape. The Andaman and Nicobar Islands, on the other hand, are larger in size. They are more in number and more widely scattered. There are about 200 islands in the Andaman group and 19 islands in the Nicobar group.

MAP SKILLS

On an outline map of India show the following.

- (i) Mountain and hill ranges- the Karakoram, the Zaskar, the Patkai Bum, the Jaintia, the Vindhya range, the Aravali, and the Cardamom hills.
- (ii) Peaks- K2, Kanchenjunga, Nanga Parbat and the Anai Mudi.
- (iii) Plateaus- Chhota Nagpur and Malwa
- (iv) The Indian Desert, Weste

**EXERCISE-01****Multiple choice questions**

1. The Northern most range of the Himalayas is Known as **SPF039**
(1) Lesser Himalayas
(2) Himadri
(3) Shivalik
(4) None of the above
2. The Kangra and Kullu Valley are located in **SPF040**
(1) Uttarakhand
(2) Himachal Pradesh
(3) Jammu and Kashmir
(4) Uttar Pradesh
3. Majuli is a riverine island located in the river **SPF041**
(1) Ganga (2) Yamuna
(3) Brahmaputra (4) Kaveri
4. The soil containing calcareous deposits is locally Known as **SPF042**
(1) Kankar (2) Bhangar
(3) Bhabar (4) None of these
5. A landmass bounded by sea on three sides is referred to as **SPF043**
(1) Coast
(2) Island
(3) Peninsula
(4) None of the above
6. Which of the following divisions of India has the oldest landmass? **SPF044**
(1) The Himalayas
(2) The Northern Plains
(3) The Peninsular Plateau
(4) The Indian Desert
7. The northern part of the western coast is called the **SPF045**
(1) Kannad (2) Malabar
(3) Konkan (4) Coromandel
8. Which of the following physiographic divisions of India was formed out of accumulations in the Tethys geosyncline?
(1) The Himalayas **SPF046**
(2) The Northern Plains
(3) The Peninsular Plateau
(4) The Indian Desert
9. Which part of the Himalayas is perennially snowbound? **SPF047**
(1) Great Himalayas or Himadri
(2) Lesser Himalayas or Himachal
(3) Shivaliks
(4) Purvanchal
10. Which of the following is the highest peak in India? **SPF048**
(1) Mt. Everest (2) Kanchenjunga
(3) Nanga Parbat (4) Nandadevi
11. Which of the following is the average height of Great Himalayas? **SPF049**
(1) 4000 m (2) 8000 m
(3) 6000 m (4) 2000 m
12. The northern plains are formed of **SPF050**
(1) Black soil (2) Red soil
(3) Alluvial soil (4) Desert soil
13. The wet and swampy belt of the Northern Region is known as: **SPF051**
(1) Bhabar (2) Terai
(3) Doab (4) Bhangar
14. Which two hills are located in the south-east of Eastern Ghats? **SPF052**
(1) Mizo Hills and Naga Hills
(2) Javadi Hills and Shevroy Hills
(3) Patkoi Hills and Manipuri Hills
(4) Mizo Hills and Patkoi Hills
15. The highest peak in the Eastern Ghats is- **SPF053**
(1) Anai Mudi (2) Doda Betta
(3) Mahendragiri (4) Gurushikhar

NCERT Basics : Class 9

16. The only large river in the Indian Desert
(1) Chambal (2) Sabarmati
(3) Chenab (4) Luni **SPF054**
17. Barchans are found in **SPF055**
(1) Northern Plains
(2) Mountains
(3) Islands
(4) Deserts
18. Large rivers such as the Mahanadi, the Godavari, the Krishna have formed extensive delta on this coast **SPF056**
(1) Western coastal plains
(2) Eastern coastal plains
(3) Both of them
(4) None of them
19. This island is the administrative headquarters of Lakshadweep **SPF057**
(1) Minicoy (2) Kavaratti
(3) Pitli (4) Amindive
20. The western coastal strip, south of Goa is referred to as; **SPF058**
(1) Coromondal (2) Kannad
(3) Konkan (4) Malabar

True or false

1. Lake Chilika lies in the state of Odisha. **SPF059**
2. A narrow gap in a mountain range providing access to the other side is called valley. **SPF060**

Match the columns

1.	Column I	Column II
(A)	Bhabhar	(i) they are renewed almost every year and so are fertile, thus, ideal for intensive agriculture
(B)	Terai	(ii) part of Himalayas lying between Tista and Dihang rivers
(C)	Bhangar	(iii) a narrow belt of about 8 to 16 km in width lying parallel to the slopes of the Shiwaliks
(D)	Khandar	(iv) was a thickly forested region full of wildlife. The forests have been cleared to create agriculture land and to settle migrants from Pakistan after partition.
(E)	Punjab Himalaya	(v) largest part of the northern plain is formed of older alluvium
(F)	Assam Himalaya	(vi) part of Himalayas lying between Indus and Sutlej

3. The altitudinal variations of Himalayas are greater in the eastern half than those in the western half. **SPF061**
4. Lesser Himalayas are composed of unconsolidated sediments brought down by rivers from the main Himalayan ranges located farther north. **SPF062**
5. All the streams disappear in this terai belt. South of this belt, the streams and rivers re-emerge and create a wet, swampy, and marshy region known as bhabar. **SPF063**

Fill in the blanks

1. Lesser Himalayas known as _____. **SPF064**
2. The _____ constitutes one of the ancient landmasses on the earth's surface. It was supposed to be one of the most stable land blocks. **SPF065**
3. In the lesser Himalayas, while the _____ range forms the longest and the most important range, the Dhauladhar and the Mahabharat ranges are also prominent ones. **SPF066**
4. The _____ comprises the Patkai hills, the Naga hills, Manipur hills and the Mizo hills. **SPF067**
5. The newer, younger deposits of the flood plains are called _____. **SPF068**
- SPF069**

**ANSWER KEY****Multiple choice questions**

Question	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Answer	2	2	3	1	3	3	3	1	1	2	3	3	2	2	3
Question	16	17	18	19	20										
Answer	4	4	2	2	2										

True or false

1. True
2. False
3. True
4. False
5. False

Fill in the blanks

1. Himachal
2. Peninsular Plateau
3. Pir Panjal
4. Purvachal,
5. khadar

Match the column

1. (A) → (iii) ; (B) → (iv) ; (C) → (v) ; (D) → (i) ; (E) → (vi) ; (F) → (ii)

EXERCISE-02

Short Answer Type Questions

1. "The land of India is characterised by a great diversity in its relief or physical features". Justify the statement. **SPF070**
2. Write four points to explain the extent, length, width, and height of the Himalayas. **SPF071**
3. Why are Himalayas called the young fold mountains? **SPF072**
4. How the Himalayas have been divided based on regions from west to east? **SPF073**
5. What is Purvanchal? **SPF074**
6. Define 'Bhabar'? **SPF075**
7. Mention some features of the Ganga Basin. **SPF076**
8. Which are the three main ranges of the Himalayas? **SPF077**

9. Mention any four features of the Peninsular plateau. **SPF078**

10. What are Corals? Explain. **SPF079**

Long Answer Type Questions

11. Write a short note on **SPF080**
(1) The Central Highlands
(2) The Deccan Plateau

12. Distinguish between the Western Ghats and the Eastern Ghats. **SPF081**

13. Write a note on the Indian desert describing its location and relief. **SPF082**

14. Give an account of the Island groups of India. **SPF083**

15. According to relief features the northern plains can be divided into four regions. Explain. **SPF084**
